SKILLS - ETL | Microsoft SQL Server | SQL Server SSMS | Transact-SQL | MySQL | Excel | Pivot Table | Power Pivot | Power Query | DAX | SSIS | SSAS | SSRS | OLTP | OLAP | Data Warehouse | OLAP Cube | MDX | Visual Studio | Report Builder | Power BI | Visio | PowerShell | R | Python | AWS | Oracle | Snowsight | JIRA

EXPERIENCE

Thermo Fisher Scientific | Data Analyst | 2023 – present

- Analyzed clinical request details, compared to clinical database and reported on patient populations.
- Created linkage data files for marketing campaign compliance and related pre-processing. Files used as clean contact files for marketing campaigns for social media and related contact modes.
- Reporting - Created market segmentation reports and other SQL pivot reports.
- Established a QA process that ensures marketing tactic lists are properly prepared by suppressing unwanted records, both manually and secondarily in an automated manner.
- Successfully built a QA report to monitor QA list processing generation against data uploaded to ensure the data services team is correctly capturing the marketing tactic lists that are produced.
- Worked with senior data process analyst to support reengagement and other marketing tactics. Used a complex multi-stage ETL process to create multiple clean files scrubbed for duplicates and opt-outs and specific dispositions for specific e-mail, SMS, and call center dialing campaigns.

Phoenix Lab | Now part of Zoetis | Data Engineer | Application Analyst | 2018 – 2022

- AWS ETL – Connected to an AWS RDS database using SSMS and python. Created ETL processes to load data using SQL and python between different servers. Loaded historical data to a production database. Automated daily data load to an AWS RDS database using SQL and python running on a server. Data analysis and SQL reports. Used SQL Server and Oracle database. Created python virtual environment using venv.
- ETL – Loaded veterinary data from one database server to another database server with transformations due to the different data structures in the databases. Analyzed the data trends from the two databases and used python and MS SQL to load millions of historical records from one database to another. Analyzed test results and operations trends over time.
- SQL reporting – Created various reports for executive leadership, department managers, staff, Zoetis, Zoetis Reference Labs, and University of Washington researchers. Analyzed data and wrote complex SQL queries to generate reports for many different users with different requirements from daily operations and logistics data to monthly and yearly accounting and financial statistics. Engaged users to re-define reporting processes to reflect various dates and statistics in the databases. Established turnaround time (TAT) metrics for different departments.
- Python automation – Created, automated, and monitored more than 40 daily reports for executive leadership, department managers, and staff. Reports included accounting reports, veterinary clinic test orders, test results details, and departmental test statistics. CEO and department managers were able to quickly see latest operational activity. Ran automated reports 3+ years.
- Predictive modeling – Used fbprophet python module to predict operational performance into the future and to show the historical trends for the business.
- University of Washington – Worked with a University of Washington team to gather microbiology test results data to meet clinical research data requirements.

Panasonic | Data Analyst Intern | 2015

- MySQL, Tableau

Providence Regional Medical Center | Volunteer | 2010 - 2011, 2014

EDUCATION

Seattle Pacific University | Bachelor of Science in Food & Nutritional Sciences | 2011 - 2013

University of Washington | 2015-2018

Data Analytics: Techniques for Decision Making Courses | 2017 - 2018

Business Intelligence: Building the Data Warehouse Certificate | 2016 - 2017

SQL Server Development Certificate | 2016 - 2016

Database Management Certificate | 2015 – 2015
