EDUCATION

Pace University, Seidenberg School of Computer Science and Information Systems Master of Science (MS) in Information Systems GPA: 3.97/4 Concentration: Data Science	New York, NY December 2023
Pune University Master of Engineering (MEng) in Computer Science GPA: 8.3/10 Concentration: Computer Science	Pune, India May 2015
Swami Ramanand Teerth Marathwada University Bachelor of Engineering (BEng) in Computer Science GPA: 7.8/10 Concentration: Computer Science	Nanded, India May 2013

TECHNICAL SKILLS & CERTIFICATION

Programming languages: Python, SQL | **Databases:** PostgreSQL, Neo4j, MySQL, NoSQL | **Data Visualization Tools:** Tableau | **Certification:** AWS Certified Cloud Practitioner | **Machine Learning:** Keras, Tensorflow, Pandas, Numpy, Seaborn, scikit-learn, Streamlit, PyTorch, OpenAI, HuggingFace, ChatBot, Git, Jira, OpenAI, RAG, Prompt Engineering, CI/CD, Docker, Testing, Vector DB's

PROFESSIONAL EXPERIENCE

Find Your Soulmate Inc., Machine Learning Engineer II, Newark, USA	March 2024 – Present
- Led the integration of cutting-edge AI technologies into Accentra.ai's language learning platform, facilitating real-time feedback and contributing to a 30% improvement in users' speaking proficiency. - Developed and trained a Natural Language Processing (NLP) model using Python and NLTK to analyze customer feedback, resulting in a 25% increase in accuracy and enabling the company to identify key areas for improvement. - Implemented a customer churn prediction model using logistic regression, achieving an accuracy rate of 85%, improved model performance by 15% through feature engineering and hyperparameter tuning.	
Amare Inc., Generative Artificial Intelligence Intern (LLM), New York, USA	September 2023 – December 2023
- Built a model & maintained data pipeline to predict success of potential matches of personality traits, leveraged NLP for the analysis and comparison of personality traits, resulting in enhanced application performance and efficiency by 30%. - Conducted in-depth astrological study on relationship success using TensorFlow, analyzing impact metrics to correlate celestial placements with successful partnerships; visualized findings using Tableau for decision-making. - Engineered & implemented GPT prompts to automate repetitive tasks, resulting in a 40% improvement in operational efficiency. - Built a conversational AI using Langchain and OpenAI, achieving a 90% response accuracy rate and handling 500 user queries per hour, enabling users to engage in natural language conversations with the AI.	
ThinkingHut IT Solutions, Data Scientist (Software Developer), Pune, India	April 2021 – October 2021
- Developed a Python script using pandas, NumPy, and Matplotlib to automate data preprocessing for statistical models, reducing data preparation time by 60% and increasing the productivity of the data science team. - Analyzed and processed large datasets to identify patterns and trends, leading to the development of a predictive model that increased sales by 10%.	
Simplicity Creations, Data Analyst (Software Developer), Pune, India	October 2019 – March 2021
- Architected and implemented an end-to-end Machine learning architecture pipeline from scratch utilizing Machine Learning Operations (MLOps) pipelines that helped coworkers add new functionality. - Designed a powerful data reporting Tableau dashboard for submarine IoT data with millions of records, collaborated with data scientists to develop & deploy a statistical analysis model on data, resulting in a 60% increase in operational efficiency. - Analyzed large-scale datasets using SQL complex queries, identifying actionable insights that drove a 15% improvement in advertising campaign performance for Ad-tech clients.	

PROJECTS

Liver Segmentation on CT Scans	November 2023
Successfully implemented liver segmentation on CT scan images using TensorFlow, achieving an average Dice Similarity Coefficient (DSC) of 0.92, surpassing the industry benchmark by 15%, enhancing accuracy & efficiency in medical image analysis.	
Star War Dialogue Translator	October 2023
Developed a Star Wars dialogue translator from English to Russian using Hugging Face Transformers and BERT, achieving a 90% accuracy rate in translation and reducing translation time by 75% for a total of 10,000 dialogue lines.	
Football League Data Analysis	August 2023
Developed a Neo4j-based data analysis platform for a football league, increasing data query efficiency by 30% and reducing data processing time by 25%, resulting in faster insights for coaches to inform game strategy and player recruitment decisions.	

AWARDS

- International Student Scholarship:** granted for exceptional academic achievement and educational background.
