Client: Calix San Jose CA

2015 April – 2019 July

Oracle cloud Finance System Manager (Implementing Revenue Management Cloud System)

- Be the function leader to implement end to end Oracle Revenue Management Cloud (RMCS) and Billing (ORMB) system, provide solution and recommendations for business requirements and own proposal responses;
- Subject matter Expertise with Revenue standards 605 and ASC606. Experience with software, services, and subscription revenue process and waterfall Rev Rec;
- Lead the team to implement the Revenue Management system (RMCS) to compliance with ASC606 Accounting rule change, manage the system reconciliation for revenue recognition and billing process. Provide the ASC605 and ASC606 parallel reporting solution to business for external report;
- Work closing with Revenue team including VP of accounting, Revenue director, Revenue manager to get all business scenarios into the implementation road map and requirements, automate the Rev Rec process by using the Oracle Revenue Management Cloud (RMCS) to enhance the quarter end and year end Revenue reporting;
- Implement Oracle Financial cloud including Receivable, Payable, Revenue, Order management, Purchasing, FA, and GL;
- Responsible for solution design, business process analysis, and system integration, offer functional oracle finance guidance regarding “best practices” and the functionality of the software modules through all phases of an implementation;
- Hands on configuration of Revenue/ billing, SSP rules engine set up, performance obligation identification and handled the implementation in a high-volume transaction, aware of integration with other Oracle modules;
- Improve business performance and shareholder value and focusing on generating recurring revenue and developing lasting customer relationship;
- Liaise with internal and external system consultants, and business process owner to identify the opportunities to grow and optimize the business through analytics, financial modeling, and business case development;
- Responsible for driving best practices and implementing significance improvements to business processes, ERP financial systems, and reporting capabilities;
- Collaborate with business and IT partners in designing business roadmap to drive the process automation and analytics strategy;
- Identify and drive Finance process automation initiatives to further leverage financial systems, streamline process flows, and create systematic methods for efficient data processing, reporting and analysis of history, current positions, and predictive future performance;
- Provide leadership to build strategic relationship with IT, Accounting, and Business operations to assist in getting solutions and changes implemented, which includes defining the business requirements, project scope, testing and post go live support of new system and enhancements;
- Lead and manage support to finance and operations business teams for Month end, Quarter end and Year end closing, identify the opportunity to automate the closing process and shorten the global closing cycle;
- Work closely with internal audit controller to establish, test and document key application controls and ensure SOX compliance. Provide oversight and monitoring of Finance system compliance in accordance with established policies and standards including stewardship of finance data, Sox control and access to ERP systems;
- Create a reporting strategy that will enable the team to report and analyze financial and non-financial data and improve visibility across the business operations;
- Evaluating and defining global finance processes and procedures that meet business user requirements, identifying applicable applications or features within the ERP finance system and other systems, testing, deployment, and post implementation reporting and support;
- Coaches and develops others in project team. Partner with IT to plan and implement projects, perform user acceptance tests, define reporting requirements and design needed reports; monitor and drive resolution of issues;

- Strong knowledge on Finance systems with in depth understanding of end to end system and financial data flow, manage finance system project portfolio to oversee finance systems across Accounting and FP&A teams;
- Responsibilities include process optimization and information system improvements in support of global finance goals, developing new and enhancing existing financial reporting and analytics, data stewardship and security, system integration and project management;
- Build and manage relationships with various business leaders throughout the company, and work with them to prioritize business requirements/projects;
- Design, develop, and monitor controls and compliance related to system controls over financial reporting. Work closely with the director of Internal audit to review the SOD conflict in ERP system, and the reconciliation process to make sure the system satisfies the SOX control requirements.
