

SRIDHAR KONATHALA

SUMMARY:

- Ten years of professional experience in Manufacturing, **Logistics**, banking, Insurance and Banking with strong proficiency in performing both Manual and Automation processes
- Over Three and half years of expertise in **Logistics, Transportation management** and operations.
- Provided the Business Process Mapping, Shipment Execution and Carrier Contracts/ Rating solution **design** for various transportations flows including shipments from vendors, intra distribution centers and distribution centers to **end** customer.
- Involved in **design** of the **transportation** model, creating **design** documents for integrations, reports and customizations
- Review technical **design** documents and provide inputs for changes needed.
- Creation of Workflow Agents and complex scripts ,integrating external tools with **OTM** Czarlite, PARCEL rating solution(Kewill) with the integration of external rating tools
- Involved in integration testing and analyzing the defects of integration solution between **OTM** and **Oracle Order Management** modules
- Strong knowledge in **Order** creation capture, **Order Management**, Shipment consolidation and optimization, Carrier selection, Fleet **Management**, Event **Management** in **OTM**.
- Expert in rate negotiation with carriers (UPS, FedEx, BAX) and making the decision in choosing the right carrier fitting the business needs.
- Expert in **Logistics** operations across the world. (US, APAC, Europe)
- Good understanding of SQL and creation of queries to update the data from backend/ front **end**
- Strong knowledge in interaction with 3PLs in execution of shipments (Menlo, Schenker and UPS)
- Resolve customer issues and propose solutions to suit customer needs without impacting the revenues of the company.
- Create operations review slides every month in Microsoft Visio with the status of current projects from project portfolio tool (sharepoint) and provide the slide deck to Senior Manager for presentation.
- Strong **communication**, analytical, interpersonal and organizational **skills**.

Academic Qualification

- B.Tech (Computer Science & Engineering) from Andhra University

SUMMARY OF PROJECT EXPERIENCE

CISCO – CISCO Systems, San Jose, CA
Current
OTM Lead Consultant

Jul'12 –

Project: Large scale supply chain

This involves R12 upgrade of complete supply chain model of Cisco with reengineering and transformation of existing supply chain model.

Responsibilities:

- Analyzed Business requirements, product requirements, module specific functionalities, identified testing requirements and documented test plan, use cases and scenarios.
- Configuring rate offerings, rate services, rate records for each lane from SLC to Various countries. (for AIR Parcels)
- Configuring domain structure and accesses to various roles with the required actions.
- Configured **order** releases with multiple ship to locations to be consolidated to a single location.
- Creation of screen sets and custom menus based on role of the **user**
- Identified the Data requirements to execute the test cases for each test cycle by querying the existing data from Production.
- Identified, prioritized and designed Test Scenarios and created weekly execution goals for all the test cycles.
- Defects were logged and change requests are submitted using Quality Center

- Regularly attended walkthroughs and review meetings to discuss the requirements and testing status.
- Performed Sanity Testing on new application builds prior to venturing into systems testing.
- Interact with 3rd party **logistics** partners(Menlo) to complete the **end to end** testing for each scenario.
- Send daily status on testing to all the Biz and IT managers.

Environment: **OTM** 6.2, **TIBCO**, **Windows XP**, **Quality Center**, **Oracle** R12, **TOAD**, **VPN**, **Mozilla**.

Merichem BOOST - Houston, TX Jun'12 OTM Lead Consultant	Oct'11 -
--	----------

As part of the BOOST project, Merichem **end to end Logistics** process has been automated using **Oracle** TMS (**OTM**).Integration has been done with OM, PO, AP modules and **Order management**, rate management, business process automation, Freight settlement, FTI modules

Responsibilities:

- Collect Business requirements and creation of **end to end** solution documents
- Creation of MD50s(functional **design** document), BR100 and UAT scenarios
- Review of MD70s (technical **design** documents) and provide necessary modifications as per functional specifications
- Collect master data and configure rates, locations, itineraries, lanes, service providers and other requisites for **planning**
- Configured Multi-leg Itineraries, Equipments, Saved queries and Automation agents.
- Creation of screen sets and custom menus based on role of the **user**
- Creation of SRs with **Oracle** and follow up till resolution to resolve **configuration** issues
- Interact with cross functional teams to complete the integration with AP, PO and OM
- Performed Sanity Testing on new application builds prior to venturing into systems testing.
- Send detailed plan for every activity from Business requirement gathering till go live.
- Organized successful CRP sessions to the **end** users and followed up on the action items out of the meetings
- Creation of templates for Reports(packing list, CI, BOL etc) and send them to technical team for configurations
- Creation of roadmap for future **OTM** releases and their scope

Environment: **OTM** 6.2, **FTI**, **Oracle** R12 **eBusiness Suit**, **TOAD**

New Horizons(Item master, Inbound, Outbound) - AT&T, Atlanta, GA Oct' 11 OTM Consultant	Feb'11 -
--	----------

As part of the New Horizons project, AT&T is implementing the **Oracle** Transportaion **Management** module (**OTM**) to meet the business requirements for **transportation**. The business requirement includes optimizing the **transportation** cost by utilizing the cheapest itineraries possible for the orders. This requirement cannot be met with the current version of the **OTM** module. So a custom heuristic algorithm was built to provide this functionality.

Responsibilities:

- Analyzed Business requirements, product requirements, module specific functionalities, identified testing requirements and documented test plan, use cases and scenarios.

- Involved in every aspect of product testing in **oracle** eBusiness Suite 11i and **OTM**. (Lead the testing efforts of algorithm to determine the best route)
- Configured Ground schedules, Multi-leg Itineraries, Rates, Equipments, Saved queries and Automation agents.
- Configured locations for each ship to location and ship from location of **order** releases in **OTM**.
- Creation of screen sets and custom menus based on role of the **user**
- Configured Domain structure for the rates, carriers, shipments, itineraries, items.
- **Configuration** of ERUs (Equipment reference units) for each **order** release and assignment of the equipments to planned shipments based on ERUs
- Interact with cross functional teams to complete the **end** to **end** testing for each scenario.
- Performed Sanity Testing on new application builds prior to venturing into systems testing.
- Send daily status on testing to all the Biz and IT managers.
- Identified, prioritized and designed Test Scenarios and created weekly execution goals for all the test cycles.
- Identified the Data requirements to execute the test cases for each test cycle by querying the existing data from Production.
- Defects were logged and change requests are submitted using Quality Center

*Environment: **OTM** 6.1, Fusion, Quality Center, **Oracle** 11i eBusiness Suit, TOAD, Mozilla.*

CISCO – CISCO Systems, San Jose, CA
Jan'11

May'08 –

OTM/Oracle Consultant

Project: **Oracle Transportation Management (OTM) Ph 1**

OTM is a **transportation** tool used to optimize the **transportation** costs. It is being implemented for the first time in CISCO. **OTM** is a web application which is integrated with **Oracle** EBS. It consolidated and plans the orders which creates shipments. Third party **logistics** partners process the shipments created by **OTM** and ship confirms the orders. This implementation has been done for one of the 3PL SLC sites in US (Dallas).

Responsibilities:

- Analyzed Business requirements, product requirements, module specific functionalities, identified testing requirements and documented test plan, use cases and scenarios.
- Configuring saved queries and creating bulk plan schedules for Dallas SLC at different timings of the day
- Creation of automation agents to modify the indicators, allocation of buy costs when the shipment is created, automated approval of **order** releases, defining actions when a shipment/ **order** release is modified, actions to be performed when un assigning an **order** release and unpicking an **order** release.
- Configured Domain structure for the 3PLs, Cisco planner, admin and super **user** and configuring the visibility of various actions for each role
- Assisted middle ware (TIBCO) team in understanding the business flow of sell price from **OTM** to EBS and **configuration** of xslts needed.
- **Configuration** of commodities (Flagship, carton on skids) and assignment of the commodities to **order** releases during the creation.
- Performed Sanity Testing on new application builds prior to venturing into systems testing.
- Interact with 3rd party **logistics** partners(Menlo) to complete the **end** to **end** testing for each scenario.
- Send daily status on testing to all the Biz and IT managers.
- Identified, prioritized and designed Test Scenarios and created weekly execution goals for all the test cycles.
- Identified the Data requirements to execute the test cases for each test cycle by querying the existing data from Production.
- Defects were logged and change requests are submitted using Quality Center
- Regularly attended walkthroughs and review meetings to discuss the requirements and testing status.

*Environment: **OTM** 5.5, TIBCO, Windows XP, Quality Center, **Oracle** 11i eBusiness Suit, TOAD, VPN, Mozilla.*

Project: **Oracle Transportation Management (OTM) Ph 2**

OTM has been implemented in 3 additional SLCs (Houston, Tampa and Fremont) apart from Dallas. Along with existing features, new functionalities(weekend **planning**, configuring shipping cut off, date logic in Local SLC time zones, Domain structure) has been implemented

Responsibilities:

- Analyzed Business requirements, product requirements, module specific functionalities, identified testing requirements and documented test plan, use cases and scenarios.
- Configuring Bulk plan cut off, shipping cut off as part of EBS and modification of date logic in EBS interface layer to display the early pick up, late pick up and late delivery dates in local SLC time zones.
- Configuring domain structure and accesses to various roles with the required actions.
- Configured additional Bulk plans during weekends and holidays to plan the weekend orders.
- Configuring rate offerings to call 3rd party rating engine KEWILL to get the PARCEL rates (UPS and BAX)
- Configured Itineraries, Rate offerings, Rate services, Rate records and Equipments for all the service providers in **OTM**.
- Creation of screen sets and custom menus based on role of the **user**
- Configuring saved queries and creating bulk plan schedules for Houston, Fremont and Tampa SLCs at different timings of the day
- Creation of automation agents to modify the indicators, allocation of buy costs when the shipment is created, automated approval of **order** releases, defining actions when a shipment/ **order** release is modified, actions to be performed when un assigning an **order** release and unpicking an **order** release.
- Participated in post prod.**Support** for the proj. and configured EBS for making the system work on Quarter **end** mode to get the shipments executed prior to promise date.
- Make sure all the cross functional **support** has been engaged prior to start of test cycles.
- Interact with 3rd party **logistics** partners(Menlo) to complete the **end** to **end** testing for each scenatio.
- Identified the Data requirements to execute the test cases for each test cycle by querying the existing data from Production.
- Defects were logged and change requests are submitted using Quality Center

Environment: **OTM** 6.0, Quality Center, **Oracle** 11i eBusiness Suit, , **Oracle** 9i, TOAD, VPN.

PartyGaming, Gibraltar
Senior QA Analyst

Aug'06 – May'08

PartyGaming Plc is the world's leading online gaming company and owns and operates **PartyPoker.com**, the world's largest online poker room. The Group is also the world's largest online casino and operates **PartyCasino.com**.

Responsibilities:

- Analyzed **User** requirements specifications, participated in RA (Requirement **Analysis**) session and prepared Detailed Test Plan and Test Cases
- Maintained the complete project repository using Rational Administrator
- Allocation of work based on priority of the functionality to team members.
- Prepared Test Summary Report and sent it to Client for each build.
- Performed manual Black Box and Grey Box testing for the entire application and reported the defects to the developer through JIRA
- Involved in integration testing of components through JUNITS
- Performed Functional testing and System testing using Rational Robot
- Conducted database testing by executing SQL queries for Database verification
- Utilized LoadRunner 9.0 for **performance**, volume and load Testing of the website.
- Tested the system to detect BOTS (Back office tools) by using mouse movements and word captcha.
- Regularly attended walkthroughs and review meetings to discuss the requirements and testing status.
- Conducted regression testing on each new build
- Developed the web layer and also involved in maintenance and enhancements of the same using Java, JSPs, Servlets and Struts.

AUDATEX- Audatex Systems Zurich
QA Analyst

Jun'04 – Aug'06

Audatex is an ADP group company with years of experience in the field of Vehicle Insurance and Repair.
Audatex is a market leader in Core Estimating solutions – Damage Capture and Assessment

Responsibilities:

- Involved in testing the applications for GUI, Functionality and Database Testing with both Manual black box and Automated Testing Processes.
- Maintained the complete project test repository using HP Quality Center
- Writing manual Test Cases and executed the same for each iteration.
- Performing Test Case Review to ensure test coverage of a Product.
- Performed smoke test and regression tests on release builds as per technical and functional specification.
- Performed Integration and acceptance testing of the product after the functionality is frozen.
- Logged bugs using Rational Clear Quest- Defect tracking tool.
- Performing Test Case Review (test cases written by team members) to ensure test coverage of a Product.
- Coordinating with the developers for resolution of defects, offshore coordination.
- Prepared Test Summary Report and sent it to Client for each build.
- Measure the **performance** of bugs filed after each release.

*Environment: Windows XP, VC++, Java, **Oracle** 9i, Rational Robot, Rational CQ, CVS.*
