

Flora B

Sr. Java Full Stack Developer

562-613-5988

Professional Summary:

- Over 10+ years of comprehensive IT experience specializing in the development of Desktop and Web applications.
- Proficient in Java/J2EE Technologies such as JSF, XML, EJB, JSP, Servlets, JMS, JDBC, JavaScript, Hibernate, and JDBC.
- Expertise in building robust web applications using modern frameworks including Spring Boot, Spring MVC, Spring Core, Spring Security OAuth, JWT, Struts, and Jersey.
- Proficient in implementing Persistence Frameworks like Spring Data JPA and Hibernate ORM for mapping POJOs to relational databases in n-tier architecture.
- Skilled in web services technologies such as SOAP, WSDL, UDDI, and RESTful APIs for implementing Service-Oriented Architecture (SOA) and Microservices, along with messaging queues using JMS and Kafka.
- Strong understanding and practical application of Core Java concepts including Collections, Multi-threading, Exception Handling, HashMap, Streams, File I/O, and Polymorphism. Experienced in implementing data structures.
- Proficient in leveraging Java 8 features such as lambda expressions, Stream API, Time API, Functional interfaces, and Collections.
- Establish and manage connections to a DB2 database using Java Database Connectivity (JDBC).
- Learn common Unix commands (e.g., ls, cd, grep, awk, sed, find, tar, chmod) to navigate, manage files, and perform basic text manipulations.
- Angular employs a component-based architecture, similar to the modular design in Java. This design promotes code reusability and separation of concerns, simplifying the process of building and maintaining complex front-end applications.
- ExtJS can integrate with Java-based backend frameworks, such as Spring Boot or Java EE, through RESTful APIs or WebSockets.
- Ionic is a platform for building cross-platform mobile applications using web technologies like HTML, CSS, and JavaScript. It is typically used with frameworks like Angular, React, or Vue.js.
- Extensive experience in frontend development using HTML/HTML5, XML, CSS/CSS3, SASS, LESS, JavaScript, React JS, Redux, Flex, Angular (12-15), jQuery, and Bootstrap.
- Hands-on experience in IBM Sterling Commerce OMS implementation and customization of IBM Sterling SIM and COM products.
- CDK allows Java developers to define AWS infrastructure using familiar Java syntax, enabling infrastructure as code practices.
- Jasmine has strong problem-solving skills, allowing her to debug complex issues and optimize code for performance and scalability.
- TypeScript and Java have similar object-oriented principles. Both support classes, interfaces, and inheritance. This familiarity can help Java developers transition to TypeScript.
- Proficient in designing and developing Microservices Business components using Spring Boot.
- Experience in Hibernate for object-relational mapping and SQL queries for data manipulation.
- Skilled in writing test cases in Java using Junit, Mockito, and Power Mockito.
- Proficient in deploying enterprise applications on WEB/Application servers including Apache Tomcat, WebSphere, JBoss, and WebLogic.

- Knowledgeable in integrating LDAP into WebSphere and JBoss application servers.
- Experience in packaging, integrating, building, and deploying enterprise applications on WebSphere, JBoss, and WebLogic application servers involving WAR, JAR, RAR files.
- Familiarity with UX methodology and applications like InVision and Sketch for real-time user experience.
- Experience in consuming APIs using Python requests for reading **JSON** reports and automating bug filing.
- Hands-on experience in Single Page Applications (SPA) development using Angular (12-15) and React JS.
- Proficient in analyzing Document Object Model (DOM) layout, DOM functions, JavaScript functions, and CSS across browsers using Firebug and **developer** tools.
- Experience in **cloud** data storage including AWS S3, DynamoDB, and **Amazon** RDS.
- Knowledgeable in AWS **services** such as S3, Lambda, Elastic Beanstalk, and batch scheduler, ECS, EKS, and **Terraform** for **deployment**.
- Proficient in implementing Design patterns like Singleton, Factory, DAO, and DTO.
- Experience with Spark and Spark streaming API **integration** with Kafka and Data categorization & segregation. Experience in container-based deployments using **Jenkins**, **Docker**, and **Kubernetes**.
- Experience with SailPoint **deployment** activities including connector configuration, custom rule development, and workflow configuration.
- Proficient in integrating with **RESTful** APIs and version control systems like GIT, SVN, and Bitbucket.
- Hands-on experience in package managers and **automation** tools like Bower, Grunt, and NPM.
- Experienced in **Agile** Environment and proficient in Project Management tools like JIRA and Trello.
- Proficient in SQL expression, stored procedure, triggers, Oracle, and NoSQL databases like MongoDB, Cassandra.
- Hands-on experience with **unit testing** and end-to-end **testing** using front-end test tools like Jest and Puppeteer.
- Familiarity with front-end tools like Babel, Webpack, NPM, and basic understanding of SDLC and Data warehouse concepts.

Technical Skills:

Languages	Java 8, J2EE, SQL, Python
J2EE Technologies and frame Works	Core Java , JEE, Servlets, JSP, EJB2.0, JDBC, MVC Architecture , Java Beans, JSTL, JTA, JMS, Hibernate, Spring , Spring Boot, JUnit, MAVEN, Microservices, REST, JAX-WS, JAX-RS
UI Technologies	HTML5, JavaScript, jQuery, AJAX, Angular, React, CSS, DOM, JSON , Bootstrap, Java Script
Tools & Framework	Spring , Hibernate, Spring MVC, Spring Boot JSF, Maven, ActiveMQ, Typescript, Struts, Kera's, Machine Learning, GCP, JIRA. NodeJS
Web services	SOAP , Restful , WSDL, Microservices, Jersey, Apache CXF, UDDI, Axis2, AWS
Web/App Servers	Apache, Tomcat, Web Sphere, Web Logic.
Database	SQL-Server, MySQL server, Allegro graph, Cassandra
IDEs and Integration	Eclipse, IntelliJ, RAD, Jenkins , SOAP UI, POSTMAN, Swagger, ANT, Maven

Tools	
O-R mapping	Hibernate.
Testing Tools/ Others	JUnit, Selenium, Putty
Version Control	Git
OS & Environment	Windows, Linux
Design Patterns	MVC, Singleton, Factory Pattern, Prototype, Object pool
Cloud services	Amazon web services (AWS), Azure Services.
SDLC	Agile, waterfall, Requirements gathering, Testing
Data Warehousing	ETL tools, Data modeling, Data Integration

Professional Experience:

Client: Texas capital bank ,TX

April 2023 to Present

Role: Sr. Java Full Stack Developer

Responsibilities:

- Developed user interaction screens utilizing HTML, CSS, Bootstrap, Typescript, and React, ensuring efficient design and seamless user experience.
- Collaborated with cross-functional teams to translate C#/.Net code into Java/Spring Boot, facilitating integration between systems and improving scalability.
- Created custom directives, decorators, and services to interact with backend RESTful services, enhancing application functionality.
- Agile involves working in short iterations or sprints, usually 1-4 weeks long, allowing for regular feedback and adaptation.
- Write and execute SQL queries to retrieve, insert, update, or delete data in DB2 tables.
- Use Unix text editors like Vim, Emacs, or Nano for editing code and configuration files.
- Cloud platforms provide resources that can be dynamically scaled based on demand. This is especially important for Java applications that need to handle variable workloads.
- CDK structures infrastructure as objects and classes, making it easier for Java developers to create reusable components and maintain infrastructure codebases.
- Jasmine is proficient in Java, with a deep understanding of its core libraries, data structures, and algorithms. She writes clean, efficient, and maintainable code.
- Process data retrieved from DB2 using ResultSet objects in Java.
- Know how to use Unix-based integrated development environments (IDEs) like IntelliJ IDEA or Eclipse.
- Microservices are loosely coupled, independently deployable services, each focusing on a specific business capability.
- Java developers in Agile environments typically use CI/CD practices to automatically build, test, and deploy code. This ensures quick feedback and reliable software releases.
- Angular is a comprehensive front-end framework for building single-page applications (SPAs) using TypeScript or JavaScript.
- Cloud environments encourage the use of IaC for infrastructure management. Java developers may use tools like Terraform or AWS CloudFormation to define infrastructure as code, enabling automation, consistency, and easier management of cloud resources.

- CDK provides high-level abstractions for AWS services, such as S3, Lambda, and DynamoDB, allowing Java developers to focus on building solutions without getting bogged down in low-level details.
- Jasmine has experience with popular Java frameworks like Spring and Hibernate, allowing her to build robust enterprise applications and manage database interactions effectively.
- While Ionic primarily uses web technologies, Java can be integrated for backend services, business logic, or interfacing with other Java-based technologies. Java is commonly used for developing RESTful APIs or microservices that support Ionic applications.
- Familiarize yourself with basic SQL operations like SELECT, INSERT, UPDATE, DELETE, and JOIN to perform common database tasks.
- Jasmine applies design patterns and architectural best practices to create scalable and modular software solutions.
- Planned the front-end single page application with React.
- Use prepared statements to protect against SQL injection attacks and improve query performance.
- Angular is based on a component-driven architecture, where each UI element is a self-contained component.
- You can package ExtJS applications into Java-based web applications for deployment, such as WAR or JAR files.
- Incorporated react-redux for global state management, mainly for authentication process, and added redux-thunk for asynchronous handling.
- If you have a Java backend (e.g., using Spring Boot or Java EE), you can connect it to your Ionic application via REST APIs. This requires familiarity with HTTP/HTTPS, JSON data exchange, and handling asynchronous communication.
- Used react-bootstrap for styling and responsive web design.
- Utilized Maven to build projects and deployed them to AWS using Jenkins pipelines, ensuring efficient deployment processes.
- Angular provides a robust routing mechanism to manage navigation within a single-page application. This is somewhat akin to RESTful routing in Java-based web applications.
- You may need to create REST endpoints in Java to serve data to the ExtJS front-end.
- Learn how to interact with SQL databases in Java using JDBC (Java Database Connectivity).
- Implemented unit test cases with mock frameworks to ensure the reliability and stability of the application.
- Contributed to backend development using Micro Service Architecture, leveraging Spring and Spring Boot frameworks. Utilized Git source control via Bitbucket for version tracking and collaboration throughout the development process. Employed application frameworks such as Spring 3.0, Spring Batch, Hibernate, JPA, Struts, Tiles, and Spring MVC to streamline development tasks.
- Implemented Swagger to document RESTful APIs, ensuring clarity and ease of understanding for consumers.
- Designed and developed enterprise APIs, with thorough testing using tools like SOAPUI and Postman to ensure reliability.
- ExtJS uses the Model-View-Controller (MVC) or Model-View-ViewModel (MVVM) architecture, which should align well with typical Java-based design patterns.
- Utilize AWS tools like AWS CloudFormation or AWS CDK (Cloud Development Kit) to define and provision AWS resources programmatically.
- Enforced REST API design guidelines for microservices, promoting consistency and maintainability across the application. Implemented Spring Security for authentication and authorization using JWT and OAuth, ensuring secure access to resources.

- Utilized Jira for bug tracking, Git for version control, and Jenkins for continuous integration, maintaining code quality and stability.
- Developed and maintained comprehensive documentation, including providing training to team members to ensure clarity and understanding.
- Created solution deployment, high-level design, and architecture documentation, providing detailed guidance for project team members, production support, and operations personnel.

Environment: Java, PL/SQL, Spring, Spring Boot, Spring Batch, IBM Sterling OMS, Oracle, PL/SQL, Cassandra Tomcat, MVC, XML, JSP, JSON, AWS, HTML5, XHTML, CSS, SASS, Bootstrap, JavaScript, jQuery, React JS, DOM, React, Splunk, Actimize, AWS EC2, S3, JBoss AS 7, AWS Scheduler, Terraform, Cloud formation, Kafka, SailPoint, Spark, zookeeper, HBase, Gradle, Maven, CI/CD, Jenkins, Kibana, Jenkins, Docker, Kubernetes.

Client: CareFirst SBP , MD

June 2020 to March 2023

Role: Java Full Stack Developer

Responsibilities:

- Engaged in discussions with business experts to comprehend business requirements and translated them into technical specifications for development.
- Utilized CSS, HTML, JavaScript, JSON, JSF, Angular 12-15, and Bootstrap for designing web pages with enhanced user interfaces.
- Use ExtJS data stores to manage and synchronize data with your Java backend.
- Implemented Ajax for dynamic search functionality, enhancing user experience and interaction.
- Orchestrated the migration of on-premise infrastructure, including file servers and application servers, to AWS cloud-based infrastructure.
- Use Unix-based scripts (e.g., bash scripts) to automate repetitive tasks.
- TypeScript has type annotations, allowing you to specify the type of variables, parameters, and return values, similar to Java's explicit typing.
- Agile promotes close collaboration among team members, stakeholders, and customers. Java developers often participate in daily stand-ups, planning meetings, and retrospectives to keep everyone aligned.
- CDK organizes infrastructure code into constructs and stacks, enabling modularization and clear project structure.
- Set up AWS services such as EC2 instances, S3 buckets, IAM, and RDS, and participated in deploying applications on AWS.
- Understand isolation levels in DB2 and how they impact concurrency and performance.
- Deploy Java applications to Unix-based servers using web servers or application servers like Apache Tomcat, Jetty, or WildFly.
- Jasmine uses unit testing frameworks like JUnit and practices TDD to ensure code reliability and maintain high code quality.
- Using CDK in Java allows developers to leverage type safety and IDE features like autocompletion, reducing errors and increasing productivity.
- Agile Java developers often practice TDD, writing automated tests before implementing code to ensure that the code meets the desired behavior and remains maintainable.
- Angular comes with a Command Line Interface (CLI) that facilitates project setup, component generation, and building/testing/deploying applications.

- Jasmine is proficient with version control tools like Git and works collaboratively with cross-functional teams, contributing to code reviews and project planning.
- Identify and troubleshoot common DB2-related errors like SQL syntax issues, connection problems, or data integrity violations.
- You might use JWT (JSON Web Tokens) or OAuth for token-based security when integrating with Ionic.
- Microservices communicate with each other using lightweight protocols, typically REST or gRPC.
- Developed processes for reading and writing files to and from AWS S3 buckets to optimize UI rendering speed and reduce server-side processing time.
- Understand the process of building and deploying Ionic applications to platforms like iOS and Android.
- Explore ExtJS's AJAX and data proxy features for communicating with RESTful services in Java.
- Spring Boot includes embedded servers like Tomcat and Jetty, allowing developers to run applications as standalone services without external server setups.
- Engineered Customized Spring Multi Action controllers to manage similar operations efficiently and configured Spring and Spring JDBC frameworks for full-fledged MVC and DB interaction applications.
- Implemented Microservices architecture to modularize applications and improve scalability and maintainability. Leveraged Spring Boot Microservices to segment the application into various sub-modules, enhancing modularity and flexibility.
- TypeScript development commonly uses Visual Studio Code, which offers extensive support for TypeScript with IntelliSense and other features.
- Utilized ISO parser tool with Pivotal Cloud Foundry (PCF) and received training on Technical Essentials and Architecture with Confidential (AWS).
- Worked on Cloud Foundry, User Account and Authentication (UAA), OAuth2 Authorization, and Spring.
- Demonstrated proficiency in Redis Cache, Mem Cache, and Rabbit MQ, integrating them to store and propagate common information across applications.
- Developed Automation Scripts for Functional and Regression testing using Selenium, ensuring application reliability and quality.
- Integrated Spring with Hibernate, leveraging Inversion of Control (IoC) principles for efficient dependency management. Implemented Spring Framework's Aspect-Oriented Programming (AOP) Module to incorporate logging in the application, facilitating monitoring and troubleshooting.
- Employed Spring DAO Module to interact with databases, ensuring efficient data access and manipulation.
- Designed configuration XML Schema for applications, ensuring structured configuration management.
- Utilized Hibernate and Spring to implement enterprise service bus, facilitating communication between backend systems and web properties via Restful API.
- Employed MongoDB as a database management system for storing user-generated data, ensuring scalability and flexibility.
- Used XML, XSD, and JSON messages for data transfer, employing JAXB API and DOM for XML parsing.
- Implemented business logic in Java classes and beans in the middle tier, ensuring robust application functionality. Utilized stored procedures for data validation and developed configuration files for mapping backend database tables to beans.
- Developed and maintained build and deployment scripts using ANT, ensuring efficient deployment processes.
- Utilized RAD (Rapid Application Development) as the IDE for development tasks.

- Employed SQL Server 2010 as the database for creating stored procedures, ensuring efficient data storage and retrieval. Engineered analytical engines to extract data from API sources and present it back as APIs or persist it into NoSQL platforms, facilitating data **analysis** and reporting.
- Designed and prepared **unit** test cases using JUNIT and Log4j, ensuring the reliability and stability of the application. Utilized Angular.js with Node.js for **web** application development, enabling efficient and dynamic frontend development.

Environment: **Java** 8, J2EE, CSS, HTML, **Java** script, **JSON**, JSF, Angular 12 13 14 15, Bootstrap, **XML**, WSDL, JMS, **Spring** IOC, MVC, **Spring** DAO, Struts, Hibernate, REST and **SOAP** API's, MongoDB, SQL Server, SQL, JUnit, Log4j, Apache Tomcat 6.0, SVN.

Client: Guardian Life Insurance , GA

January 2018 to May 2020

Role: **Java** Full Stack **Developer**

Responsibilities:

- Responsible for collecting **Business** Requirements and User specifications from **Business** Analyst/client team, ensuring alignment with project objectives.
- Engaged in the development, **testing**, and **deployment** of **web services** for the application, ensuring functionality and performance.
- Utilized **Spring** Framework with dependency injection for application customization and upgrade, enhancing flexibility and maintainability.
- Understand basic DB2 database design principles, including tables, keys, indexes, and relationships.
- ExtJS provides a rich set of UI components and layout mechanisms, allowing you to create complex user interfaces.
- Learn about ExtJS's component-based structure and how to use it effectively to build responsive and user-friendly interfaces.
- In **Agile** teams, **Java** developers may work in pairs to write code, fostering knowledge sharing and reducing errors through real-time code reviews.
- Work with database administrators to ensure **Java** applications align with DB2 design and performance goals.
- Angular is built with TypeScript, a superset of JavaScript that introduces static typing, classes, and interfaces. **Java** developers will find TypeScript's type system and object-oriented features familiar.
- Familiarize yourself with debugging techniques for both **Java** and Ionic applications. In Ionic, tools like Chrome DevTools can be useful for debugging the frontend, while **Java** IDEs like IntelliJ IDEA or Eclipse are useful for backend debugging.
- **Agile** teams use user stories to describe requirements from a user's perspective. **Java** developers often work from a backlog of these stories, prioritized by product owners, to ensure focus on the most valuable features.
- Angular has a robust dependency injection system, much like **Java's** **Spring** Framework. This allows for better modularization and easier **testing**, aiding developers in managing dependencies within their Angular applications.
- Microservices require mechanisms to discover each other and distribute traffic effectively.
- Implemented core **Java** for all **business** logic modules, leveraging **Java** 8 features such as Stream, Lambda Expressions, and functional interfaces.
- If you work in a team, it's crucial to communicate effectively with frontend developers who specialize in Ionic .
- Designed and developed Microservices **Business** components using **Spring** Boot, facilitating modularization and scalability.

- Leverage the AWS SDK for **Java** to interact with AWS **services**. It includes libraries and APIs to communicate with most AWS offerings, streamlining development.
- Employed **Spring**/Spring Boot and REST **web services** frameworks across applications, enabling efficient communication and **integration**.
- Monitor **Java** applications on AWS with **services** like **Amazon** CloudWatch for metrics and logs, and AWS X-Ray for distributed tracing.
- Utilized **Spring** MVC **architecture** to develop commands objects, controllers, DAOs, and model objects, ensuring a structured and organized codebase.
- Integrated Splunk for monitoring and analyzing alerts in case of failures, ensuring timely resolution of issues. Implemented Hibernate in the data access object layer to access and manipulate information in Oracle 10g DB, optimizing data retrieval and storage.
- Developed rich prototypes and applications using HTML, CSS, JavaScript, jQuery, **XML**, AJAX, **JSON**, **AngularJS**, and Bootstrap, ensuring enhanced user experience.
- Demonstrated expertise in CSS concepts, including CSS Background, Layouts, Positioning, Animations, and Box Model, ensuring visually appealing and responsive designs.
- Utilized JavaScript, Ext JS, and **AngularJS** for frontend development, ensuring dynamic and interactive user interfaces. Created cross-browser compatible **web** pages with responsive design using Bootstrap and Media queries, ensuring compatibility across various devices.
- In the TypeScript ecosystem, you'll often use Node.js with package managers like npm or Yarn, and build tools like Webpack or Parcel.
- Applied MVC **architecture** in the browser, event-driven applications using AJAX, JavaScript, **JSON**, and **AngularJS**, enhancing application structure and performance.
- Configured complex JIRA workflows and schemes, ensuring efficient project management and **collaboration**. Implemented **AngularJS** MVC Framework for binding data retrieved from the database to the view, enhancing data presentation and user interaction.
- Leveraged file management and image libraries to efficiently handle file operations and image manipulation.
- Provided IaaS support to clients on Microsoft Azure **cloud**, configuring storage pools, virtual machines, and backup solutions.
- Troubleshoot and resolved test incidents for MS Azure IaaS platform, ensuring the stability and reliability of **cloud** infrastructure.
- Enhanced frontend components using jQuery and JavaScript to add interactivity and dynamism to **web** pages, improving user engagement.
- Developed reusable **AngularJS** directives, ensuring code reusability and maintainability.
- Practiced Test-Driven Development with **Agile SCRUM** methodology, actively participating in **business** meetings and status updates.
- Debugged applications using Firebug to identify and rectify issues in document traversal and node manipulation. Developed a **RESTful** API for account management and security role lookup, improving application functionality and **integration**.
- Tracked and resolved defects using Quality Center, collaborating with QA and product owners to ensure quality deliverables.

Environment: **Java**, J2EE, AWT, **Spring**, **Spring** Boot, Oracle, Spring, Hibernate, MVC, Tomcat application Server, JSP, Servlets, Splunk, Oracle 10g, PL/SQL, Junit, **XML**, log4j, Maven 3.0, HTML/HTML5, CSS/CSS3, JavaScript, TypeScript, jQuery, Bootstrap, Angular 12 13 14 15, AJAX, **JSON**, JIRA, REST **web services**, Azure, AWS.

Role: Java Developer

Responsibilities:

- Provided application support for Java-based city applications, ensuring smooth functioning and resolving any issues that arise.
- Utilized Java applications integrated with Hibernate for efficient data management and persistence.
- Developed DAO objects and implemented data access layer using JPA-Hibernate to facilitate CRUD operations on databases.
- Employed Angular HTTP services for backend REST web services interactions, facilitating the exchange of JSON data. Implemented Servlets to handle HTTP requests for online transactions, credit card payments, registration processes, and bug tracking functionalities.
- Developed database access programs using JDBC thin driver to execute queries, prepared statements, and stored procedures in the DB2 database.
- Utilized XML schema (XSD), XSL/XSLT, and XML technologies to navigate and process XML documents, enhancing data processing capabilities.
- Developed SOAP web services and clients using JAXB and XML, adhering to the SOAP architecture standards.
- Leveraged core Java technologies such as Collection API, Multithreading, Java 8 Lambda Expressions, and Streams for efficient application development.
- Integrated Angular to provide custom services and validate credentials in the user interface using custom filters.
- Built Single Page Applications (SPA) using Angular components, Forms, Events, Router, Animations, and Flux concept for enhanced user experience.
- Implemented Spring Boot and Spring Security features to enhance application security and manage backend queries efficiently.
- Utilized Spring Injection/Inversion of Control and Hibernate ORM for streamlined data retrieval and backend query execution.
- Implemented CI/CD pipelines using Jenkins for automated build and deployment processes.
- Leveraged core Java concepts like Collections Framework, Exception Handling, I/O System, Multi-Threading, JDBC, and Data Structures for robust application development.
- Applied object-oriented programming principles, data structures, and algorithms to solve complex problems effectively. Utilized Gradle build tool for automating Docker file generation, image building, and pushing to Docker Private Registry. Developed Automation Frameworks using Eclipse, Maven, Selenium WebDriver, and TestNG, extensively leveraging JAVA OOP's concepts.
- Deployed systems on AWS Infrastructure services such as EC2, utilizing various AWS services like S3, IAM, Elastic Beanstalk, Lambda, CodeCommit, and CloudWatch.
- Created and deployed REST API and Microservices using Spring Boot, ensuring efficient communication between microservices and front end.
- Implemented authentication for RESTful web services using Spring Boot Security Starter to enhance application security. Utilized Spring Batch for processing large volumes of records efficiently, including logging/tracing and transaction management.
- Designed and developed Restful API and services following best practices for interaction within microservices and with the front end, using Spring MVC and Spring REST.
- Created Data Pipelines on AWS for scheduling migration of data from SFTP servers to RDS instances, ensuring smooth data flow.
- Used Apache CXF as the Web Services framework to implement REST APIs.

- Developed and Deployed SOA/**Web Services** (**SOAP** and **RESTFUL**) using Eclipse IDE.
- Established an Informant service layer using **Spring** MVC for efficient service management.
- Utilized JIRA for bug tracking, issue tracking, and project management, ensuring effective **collaboration** and task management.

Environment: **Java** 8, Hibernate, **Java**, Servlets, JSP, **Spring** IOC, **Spring** boot, Microservices, **Spring** Core, APIGEE, CSS, JavaScript, Angular 4, JPA, **Web** Logic, JDBC, DB2, CI/CD, **Spring** IOC, Hibernate, SVN, Rabbit, **XML**, XSL, XSLT, XSD, SAX, JAX-WS (**SOAP**) **web services**, Bit Bucket, ANT, **Spring** Boot, SOA.

Client: Grapesoft Solutions Hyderabad, India

August 2013 to March 2015

Role: **Software Developer**

Responsibilities:

- Developed and tested functionalities by writing code in HTML, CSS, JavaScript, and jQuery, and ensured their robustness through JUnit **testing**.
- Proficiently utilized CSS for various styling aspects including backgrounds, layouts, positioning, text formatting, borders, margins, paddings, tables, pseudo classes, pseudo elements, and behaviors, ensuring a visually appealing and consistent user experience.
- Rapidly prototyped interface designs using hand-coded, validating, standards-compliant, and semantically rich HTML and CSS, while considering cross-browser compatibility and addressing any identified bugs.
- Created and optimized graphic prototype websites and application interfaces using HTML and CSS, focusing on enhancing performance and user engagement.
- Developed application-level code to interact seamlessly with APIs and **Web Services**, leveraging technologies such as AJAX, **JSON**, and **XML** to facilitate data exchange.
- Applied usability principles to design intuitive user interfaces for **web**-based customer applications, prioritizing user experience and accessibility.
- Designed **business** applications adhering to **web** technologies standards like HTML, XHTML, and CSS, ensuring compliance with W3C guidelines.
- Took responsibility for code optimization and conducted thorough **testing** of websites across different browsers, ensuring consistent functionality and appearance.
- Developed applications tailored for different browsers and addressed compatibility issues through bug fixing and optimization efforts.
- Implemented data-formatted **web** applications and deployed scripts using client-side scripting techniques with JavaScript, enriching user interactivity and responsiveness.

Environment: HTML, CSS, JavaScript, TypeScript, ECLIPSE, Adobe Photoshop, MS Office, Firefox, AJAX, **JSON**.
