(401)

SUMMARY OF QUALIFICATIONS

Exceptionally well proficient and resourceful Professional with more than five years of experience and a solid academic background in computing; possess excellent analytical, visual, and **problem** solving skills with the ability to manage multiple projects simultaneously while producing high quality work in a fast-paced environment.

Areas of expertise:

Object-Oriented/Functional Programming	RDBMS
SQL Server	Data Warehousing/NO-SQL
OLAP	Java/J2EE , C/C++, VB/C#, Web services
Mathematics	Game Design & Development

EDUCATION

MS in **Computer Science Education**, Keiser Institute of Technology, Ft Lauderdale, FL
·GPA: 3.9/4.0

AS/BS in Game Development & Simulation **Programming**, New England Institute of Technology, Warwick, RI
·GPA: 3.50/4.00 Major: Game Development & Simulation **Programming**

BS in **Computer Science**, Bellevue University, Bellevue, NE
·GPA: 3.92/4.00 Major: Technology Advance Program

AAS in **Computer Science**, Community College of Rhode Island, Warwick, RI
·GPA: 3.80/4.00

RELEVANT EXPERIENCE

****Java/C++ Developer Contractor****, IDC TECHNOLOGIES INC, AT&T ARICENT TECHNOLOGIES, Meriden, CT, June 2014 – Aug 2016

Architect an Intel-sensor adapter for an electronics telecommunications system written primarily in C/C++ using abstract models of the system that led to the development of remote client socket programs that send messages across TCP/UDP/SIP IP to various gateway servers; encrypted messages were initially stored as **XML** and serialized to POJOS via JAXB and DOM. Developed visual component libraries in C++ with optimized compilation done with C++ Borland compiler using register calling convention to optimize function calls in handling dynamic events . Implement native method calls from **Java** to C/C++ and converted C/C++ code to **Java** for socket **implementation** of TCP/UDP/SIP messages across each gateway platform. Developed remote proxies to the new integrated application platform using **Java** Remote Method Invocation (RMI) that facilitated transfer of serialize-able messages across each client machine that interacted with the gateway platforms written in legacy code. Wrote **java** code to update alarm messages for each gateway platform and implemented SIP messages for real-time multimedia intercommunication using pure object-oriented techniques. Developed a GUI application as a rewrite for the data-gateway-platform that allows customers to load large bulk of records from the files using JavaFX with Apache Hadoop, which led to increase throughput, scalability and load balance. Developed

and implemented a ContactMatchEvaluator SOAP-based web-service in C# to calculate similarity scores between contact records; tested algorithm of ContactMatchEvaluator via SOAP UI NG API Builder. Developed a customized JMX notification listener to send notifications on low memory usage threshold; development was done within GNU/LINUX UBUNTU environment using Net beans IDE as development platform. Generated python script for start-up of application server on remote machines that later transitioned to mere standalone development. Several OOP Design Patterns were applied during development such as Data Access Object (DAO) with Hibernate/JPA, EJB 3.0 and JMS along with Dependency Injection (DI), Singleton, Facade, Adapter, Abstract Factory, Produce-Consumer, GUI, Proxy, Observer, Object-Pooling, Delegation. Source code was version through SVN. Other contributions include converting code from JDK 1.7 to JDK 1.8.

Java/C++ Developer Contractor, Octapace LLC, 3M CitiusTech Inc, Princeton, NJ, Jun 2013 – Feb 2014

Worked on international classification of diseases (ICD) project for healthcare industry and facilitated the development, implementation, and transition of ICD-9 to ICD-10. Main role in this project include developing a medical device engine for encoding rules for a clinical tracking interface called clinical abstractor via C/C++ and providing access to the clinical abstracting system via virtualization software. Developed Java Web Services to poll rules from clinical abstractor on mobile device via JAX-WS API; used APL to customize mappings for the groupers and converted code from APL to C++ for increased object-orientation and transition into ICD-10. Used LogMeIn Rescue to remotely access client machine and install Code finder Interface Module (CIM) site containing XML rule definitions and setup VMware player to manage virtual machines hosting clinical abstractor along with the coding and reimbursement system (CRS). The clinical abstractor interacted with MS SQL Server 2008/2010 database. OOP principles were strictly observed and applied throughout development including several design patterns. Testing phase was done with CUnit and the polling of lookup tables via JWS/JDBC. Assisted a team of systems-level engineers in the medical procedure that was geared toward development and implementation of a handheld device for monitoring patient heart-rate. Developed web-services for the handheld device via REST and SOAP to store information about the heart-beat of the patient. Used JAXB to do marshalling/unmarshalling of Java objects along with APIs for abstracting audit-log web-service messages. The application servers used for deploying the handheld device system includes Apache tomcat & JBoss within Eclipse RPC IDE. Wrote Unix/Schell-Scripts within the BPEL for each web-service port and BPM and MDM; this included linking Generated ANT build script to automate running process and importation of web-services and interacting with DB2/Sybase via JMS, which was versioned through SVN/Subversion using PowerBuilder as the main continuous integration tool. Developed mobile interface components using Ext JS, Angular JS, MockJax.js, Bootstrap/Twitter DOJO, GOSU, and Groovy, which interacted with MONGODB database; testing phase of the mobile service project was done through GUNIT, JUNIT, and audit logging and automated via maven.

Java Developer Contractor, Teksystems, Globalfoundries, Albany, NY, Sept 2012 – May 2013

Assisted team of engineers in the development and implementation of a route validation agent project geared toward a Linux/Windows environment. The client for this project is Global foundries a top-leading global semiconductor manufacturing industry co-partnered with IBM, Renesas, STMicroelectronics, Samsung, and Toshiba that provide services for integrated circuits. Main role include developing and implementing validation rules for the RVA architecture using an iterative agile approach. The systematic planning, analysis, design, and development of the RVA architecture was accomplished by using core java coupled with Spring MVC and SOA architecture along with RESTFUL API including validating content of route

spreadsheet using Apache POI in conjunction with JAXB within JBoss application server and interacting with DB2/Oracle database. The version control system used for managing RVA project include SVN with Jenkins as the continuous integration tool for automated build, checkup, and testing in both development and production environment, which was simplified by unit and integration testing via JUnit Generator. Automated test procedures for development team using AgitarOne as observation-driven testing tool, which helped improve code performance and pinpoint unforeseeable bugs. Also, developed and implemented a Mailroom Print application geared toward an AIX Linux environment. Developed an SFTP program for securing the transmission of remote components in an SSH 2 server along with encapsulating Mailroom Print Services using JAX-WS API web-service and MQ message broker along with executing UNIS/Shell-Scripts. Experience with MDM and the application servers used for deploying MATRX project include IBM Web-sphere within RAD IDE. The applications were developed using EJB 3.0, JQuery/Javascript, Spring Web-flow, Spring MVC, Spring IOC, JSF, and Hibernate/JPA along with JQuery, JSON, EXT JS, Backbone.js, Node.js, Knockout.js, MockJax.js to simplify drag and drop of UI components. OOP design patterns such as Proxy, Façade, Abstract Factory, DAO, Singleton, and Dependency-Injection were used throughout the lifecycle development. Generated build scripts that automate running process and importation of web-services that interact with Oracle database via JMS/JDBC, which was versioned through Clear-Case. Testing phase of SFTP was done with Javassist and JUNIT framework and automated via maven.

Java Developer Contractor, KForce, CAI, Pittsburgh, PA, May 2011 – Mar 2012

Analyzed project requirements and developed Java/J2EE applications for the national merit scholarship corporation e-commerce industry. Assisted in the systematic planning, analysis, design, and development of integrated, distributed systems tailored toward an e-commerce environment. The client for this project is the computer aid incorporation sponsored by the national merit scholarship corporation. Java/J2EE applications were developed using technologies such as Struts, Hibernate, Spring IOC, Spring Transactions, JSF, JSP/Servlets, Adobe Flex, JQuery, PHP, Bootstrap XUL, FTL, PostgreSQL/Sybase, MySQL, Perl/CGI-Script, UNIX/Shell-Script, Python, aspect-oriented programming (AOP), JNDI, Javascript, subversion (SVN), GIT, xml Marshalling/Unmarshalling (JIBX) and other open source APIs along with the use of JUnit, Tomcat, HTML 5, GWT, CSS 3, XSLT along with Maven for deployment testing and build scripting within Unix/Linux environment.

Computer Programmer Part-time, RI State House, Legislative Data, Providence, RI, Oct 2009 - Jan 2015

Major role in this position involved planning, analyzing, designing, developing, and maintaining dynamic application programs for a local government agency. The conversion from project requirements to functional applications is facilitated via Agile life cycle and rapid application development (RAD) with Object-Oriented Programming (OOP) paradigm that brought about successful development of integrated systems.

Projects/Accomplishments:

- Analyzed program requirements incorporating agile methodology to design and develop database systems on both web and enterprise platform.
- Programmed database to extract, transform, and load data across various platforms using T-SQL with Stored Procedures to meet requirements of legislative data.
- Generated electronic reports/forms for Legislative Data Systems and website using MS Access with SQL, T-SQL, Embedded-SQL, and VBA Macros.
- Generated Embedded SQL Queries for updating forms and reports from inside MS Access database using Data Active Object (DAO).
- Wrote code in VBA Macros to dynamically update database forms.

- Developed documentation including file definitions, data-dictionary, entity relationships and attributes to facilitate readability and maintainability of programs.
- Programmed a website for RI State House using Microsoft Front Page to interface with DB2 J Queries and MS SQL Server along with ASP/ASP.NET within Visual Studios.
- Designed and developed an **automated** time-sheet intranet application system for the RI State House using Core **Java**, **Java** Server Face (JSF 2) with AJAX Pagination, JavaScript, CSS, JSP/JSTL, HTML 5, Hibernate, Apache Derby/My-SQL, LDAP Novell E-Directory for security and authentication with JNDI along with Quartz Scheduler for running batch scripts to start/stop application server, JConsole/JVisualVM with JMX for monitoring JVM performance, and Oracle Glassfish server within Netbeans IDE.
- Designed and developed a menu order tracking program for the clerks of RI State House Administrator using JSF, EJB, JNDI, **Java** Mail API, and JPA

Database Programmer Contractor, RI State House, DOE, Providence, RI, May – Aug 2009

Main role include participating in the systematic design and development of database applications for a legislative team. This **process** incorporated systems principles to developing dynamic database applications that were used by the department of education to solving case incidents. The project undertook in this position was a serious one entailing multiple JAD sessions and meetings with the legislative team to discuss technological requirements. The project was successfully completed with an interactive report displayed on the website for the department of education. As a result, the RI State House JCLS recruited me to work part-time in the legislative data systems office.

Projects/Accomplishments:

- Participated in designing a schema based on requirements using the SDLC & SOA, & **Agile**.
- Converted relational database schema to a data-warehouse.
- Performed extraction, transformation, and load (ETL) between relational data sources and data-warehouse.
- Used SQL Server **Analysis Services** (SSAS) to develop data-warehouse .
- Used Share point via SQL Server Reporting **Services** (SSRS) to generate reports on ad-hoc queries.
- Designed & developed **web**-site using thin-client **web**-application tier model, **web** sphere, **spring** framework, & MVC Design Pattern.
- Generated report on **web** site using JSP, Servlets, Javascript, CSS 3, HTML/XHTML, Struts, JBOSS, & Enterprise **Java** Beans in an Eclipse and Net beans framework.
- Generated SQL Queries and stored procedures for increased efficiency and performance
- Used **Spring Web** flow and **Web** sphere to control and monitor **web**- **services**.
- Generated **XML/XSLT** to mock up database objects supplemented by the use of **web**- **services** such as JBOSS, JSS/JMS, and XSLT to transform between documents.
- Used AJAX to simplify the delivery of client **services** and hibernate to map persistent objects with relational database structures.
- Used JavaScript, VBScript, ASP/JSP, & SQL to integrate SQL Server database with **Java** Application.
- Trained employees in the usage of SQL Server Management Studios (SSMS), SQL Server **Analysis Services** (SSAS), & SQL Server Reporting **Services** (SSRS).

TECHNICAL KNOWLEDGE & SKILLS

Database Tools: Data-Modeling Tools, ERWin, MS Visio, SQL Server Management Studio, Profiler, ER-Win, MS-Visio, Informatica Power Center, Information-Repository-Dictionary System (IRDS), MS SQL Server (2000, 2005, 2008), MS SQL 2000, XML, MSRS, DTS, SQL Profiler, MSAS, VSS, SQL ServerAgent Jobs, Aggregation Wizard in SSAS Reporting Services, SQL Server Reporting Services (SSRS) 2000, Transact-SQL (DDL, DML), Stored Procedures and Functions, SQL Profiler, Installing/Configuring SQL Server Instances Backup & Restore Defining & Managing Security on SQLServer Databases, Data Extraction, Transforming, and loading (ETL), SQL Tools (SSIS, Data Transformation Services (DTS), Bulk-Insert, BCP), Master Child Packages, SSIS Package Configurations, XML Files & SQL tables, On-Demand & Schedule Reports, Microsoft SharePoint, Reporting Services, Static and User Defined Reports, KPIs & Dashboards, ROLAP and MOLAP (multidimensional) cubes, SQL Server Analysis Services, Multidimensional Warehouse, MDX Queries, Oracle, DB2, LDAP, BC2, Perl, Object-Oriented Technology, Machine-Language, SSIS, Data Transformation Services (DTS), Bulk-Insert, BCP, MongoDB, Apache Hadoop

Developemnt/Build Tools: Eclipse, Net beans, GWT, JBuilder, Jenkins, PowerBuilder, CruiseControl, AgitarOne JUnit Generator/Agitator, Weblogic, Websphere, Glassfish, JBoss, Tomcat, JIRA, SM Plus, SiView Standard Material Manager (MM), SiView Standard Specification Manager (SM), Citrix XenApp/XenServer/XenDesktop, Visual Studios (2005, 2008, 2010), Rational Application Development (RAD)

Database Languages: SQL, T-SQL, Embedded-SQL, Dynamic-SQL, MDX, DB 2 SQL Queries

Business Intelligence: BIDS, SSIS, SSAS, SSRS, SharePoint

Programming Languages: VB.NET, C, C#, C++, Java, Gosu, Action-Script, Visual Basic, 2D & 3D Unity javascript/C# Programming. APL

Web Languages: HTML/XHTML, VB-script, XML/XSLT, ASP, ASP.NET, Ajax, IIS, PHP, JSP/Servlet, JavaScript, Ext JS, Spring MVC

Operating Systems: Linux/Unix, Windows XP/2005/2000/NT/7, MAC, Android

Applications: MS Office (Word, Excel, Access, PowerPoint, Outlook, Front Page), Open Office Org, Microsoft Front Page Adobe (Illustrator, InDesign, Photoshop), Insite Deluxe, Wix, Macromedia (Dreamweaver, Flash), Quarks XPress, Microsoft Visio, Visual Studio, IBM SPSS

ADDITIONAL EXPERIENCE

Online Private Tutor, Online Wyzant Tutoring, Apr 2009 – Feb 2010
Worked as an Independent Contractor for the wyzant tutoring community, and was certified to teach and tutor students in mathematics, computer-science, & reading.

Major Tasks/Accomplishments:

- earned satisfactory score(s) on pre-test and was certified to teach students in the subject-areas of **mathematics**, **computer science**, and reading.
- effectively taught students the discipline of **mathematics** and **computer science**, which benefitted them in succeeding academically.

Private Tutor, Rhode Island College, Providence, RI, March 2009 – Aug 2009

Privately taught students subject-areas of **Computer Science** and **Mathematics**, and helped them integrate both disciplines interchangeably. The **integration** of both disciplines was facilitated through the teaching of algorithm development incorporating data-structures, mathematical set-theory, and discrete **mathematics** into a single conglomerate. This enabled students to perceive the deep relationship between **computer science** and **mathematics** especially in mastering both disciplinary fields. Successfully, students' **problem**-solving skills improved with effective methods derived from the amalgamation of **computer science** and **mathematics**.

Projects/Accomplishments:

- Used Eclipse and Net beans as integrated platforms to demonstrate to students the use of the **Java programming** language
- Helped students improve their mathematical skills by developing algorithms of their own that executed successfully using **Java** as an object-oriented **programming** language to demonstrate algorithms & data structures.
- Taught students the central theme of **mathematics** with respect to computability theory by exchanging topics of mathematical set-theory with **computer science** algorithms.
- Helped students gain deep insight and understanding of data structures necessary to develop algorithms with greater efficiency.
- Helped students become better **problem**-solvers through mathematical engagement and the study of data structures
- Taught students how to integrate **Java** application programs with an Oracle database via JDBC, JSP, Servlets, & Enterprise **Java** Beans technology

Private Tutor, Brian Mcelroy Tutoring, Inc, July 2008 – Jan 2009

- Helped students with math subjects especially with the preparation of SATs, MCAS, and other standard exams. Tutored students with learning disabilities, and helped them overcome abstruse subjects. Used appropriate academic principles and discipline to teach online.

Academic Tutor, CCRI, Warwick, RI 02886-1807, January 2007 – May 2008

- Tutored students in **mathematics** and **Computer Science** by earning a CRLA certification with higher salary pay, and was complimented on behalf of strong **leadership** skills and academic quality. Courses in which I tutored students comprise College Algebra, Pre-Calculus, Trigonometry, Discrete **Mathematics**, Advanced **Java Programming**, and Calculus 2.

Academic Tutor, Mass Bay College, Wellesley, MA 02481, September 2005 – May 2006

- Tutored students in **mathematics** under federal work study granted to me by Mass Bay Community College as an acknowledgment of good academic standings in **mathematics** courses. Several subjects I tutored students in comprise College Algebra, Pre-Calculus, Calculus 1 & 2, and Trigonometry. Also helped students with **computer** courses such as **Java Programming**, **Computer Application Software**, and word document typing.

COLLEGIATE ACTIVITY

Internship, Cooperative Learning, CRLA, Providence, RI, Jan – May 2008

CERTIFICATION

Certificate of Completion in Ultimate **Java** Development, Mobile Android, C **Programming**, &
Game Design and Development Specialization

JAMES CAYO
