

Sung-Hyun Kang

Senior Software Engineer

Profile Summary

- **Software Engineer** experienced in building and deploying solutions using the **MEAN / MERN** stack as well as **.NET** and **Spring Boot** backends. Experienced in **Scrum / Agile / Waterfall** development models. Along with the ability to work in large teams using **Github / Jenkins**. Known for championing positive team culture and knowledge sharing.
- Full Stack **Developer** with a strong command of **programming** languages including JavaScript, C/C++, and **Java**. Proficient in building applications with **Angular v6,8,10,13,14**, **React**, **MongoDB**, **Node.js**, **.Net**, **Springboot** writing server-side code and building APIs, and manipulating **SQL & NoSQL** databases. Solid understanding of **Authentication**, **Security**, and **version control**.

Education

University of Wisconsin-Madison
B.S. in Computer Science
Madison, WI

Technical skills

Languages: JavaScript, Python, C/C++, **Java**, Matlab / HTML HTML5, CSS (with Bulma, Bootstrap, Semantic Materialize Sass CSS3),

JavaScript stack: **Superset:** TypeScript / **FE Framework:**, React, Angular, / **Libraries:** Redux, RxJs, NgRx / **Back-end:** Node.js, Express.js, Next.js, .Net, **Spring Boot**

Databases: **SQL:** MySQL, MS SQL Server, Oracle SQL, postgres / **NoSQL:** MongoDB, Casandra, DynamoDB

Dev: Git, Gitlab, GraphQL, **Jenkins**, bitbucket, **docker**, **kubernetes**, Service Mesh, GRPC, REST

Servers: Distributed Linux Systems, SSH FTP Putty Screen Tmux, Debian, Centos, redis Ubuntu, Apache, Nginx

Cloud: AWS, Atlas, Azure, GCP, **Terraform**, Ansible

Languages

English: Fluent

XXXXX: Native level

Professional Experience

Bayer Senior Software Engineer

Remote Sept 2023-

Nov 2024

1. Delivered responsive, user-friendly **web** applications utilizing **React** and **.NET**, leveraging advanced front-end features like **Hooks** for lifecycle management and **Redux** for robust state management across complex workflows.
2. Spearheaded the migration of a monolithic **.NET** application to a **microservices architecture**, ensuring smooth decomposition of core functionalities into independently scalable **services** to enhance fault tolerance and enable **agile** deployments.
3. Architected **cloud**-based solutions on **AWS** using **services** like **S3**, **Lambda**, **API Gateway**, **DynamoDB**, and **RDS**, while optimizing data handling processes for millions of active users with an emphasis on high availability.
4. Authored optimized **SQL** queries, leveraging **Entity Framework** for data access in **.NET** and creating stored **procedures**, **triggers**, and **views** to efficiently manage large datasets, achieving high performance in high-load environments.
5. Developed scalable solutions using **Azure Cloud Services**, including **SQL Database**, **Data Factory**, and **Azure Functions**, implementing data-driven processes that increased system uptime and performance under peak traffic loads.
6. Developed **Angular Components** using **Typescript** and utilized **Angular Material** to create responsive and accessible user interfaces, created and maintained reusable **services** such as **components**, **directives**, and **pipes** to decrease development time and improve maintainability.

SHK Tech Consulting Software Developer

Remote Sep 2022- Sep 2023

7. Collaborated with the executive team to identify and seize high-impact **business** opportunities, leading to the development and **deployment** of scalable **software** solutions across five distinct industry verticals using a versatile technology stack including **MEAN**, **MERN**, **Java/Spring**, and **C#.NET**.
8. Met regularly with stakeholders and users to define technical requirements and understand **business** goals in order to tailor deliveries to their **business** goals, adjusting technical explanations to each person's level of understanding.
9. Managed **Agile / Scrum** development processes, coordinating stand-ups, sprint completions, and quality assurance **testing**, while collaborating with DevOps to create and maintain a robust **testing** pipeline for consistent code base progression.
10. Leveraged a technology agnostic approach to **software**, employing a mix of modern development stacks (**Angular**, **React**, **MongoDB**, **Express.js**, **Node.js**), enabling the rapid development, **testing**, and **deployment** of applications tailored to specific market and customer needs. Directly contributing enhancing a competitive advantage in the marketplace.
11. Built **RESTful** APIs using **Java Spring Boot**, integrating **Spring Security** for authentication, and enabling secure, scalable interactions with back-end **services** through **JSON** data.
12. Designed and developed **cloud**-based solutions leveraging **AWS services**, including **S3** for data storage, **Lambda** for serverless computing, **API Gateway** for creating and managing **APIs**, **DynamoDB** for **NoSQL** database **services**, and **RDS** for relational database management, ensuring scalable and efficient backend architectures.
13. Expertly utilized a suite of **Azure Cloud Services** to design and develop scalable solutions; employed **Azure SQL Database** for relational data storage, **Data Factory** for data **integration services**, and **Azure Functions** for building **serverless applications**, optimizing operational efficiency and system performance.
14. Consumed **RESTful** APIs and using **RxJS** and used **NgRx** to facilitate state management across the global application. Applying concepts such as **global store**, **reducers**, **actions**, **selectors**, and **effects**.

Microsoft Software Engineer

Remote May 2018- Sep 2022

15. Directed **software engineering** and system implementations for the CosmosDB team at Microsoft, focusing on defining functionalities and integrating new applications. Led architectural enhancements and **programming** teams to implement frontend changes, integrate **Azure Copilot**, and migrate the **CosmosDB** portal to a **React-based micro frontend architecture**, significantly enhancing system capabilities and user experience.
16. Led the **integration** of **Azure Copilot** into the **CosmosDB Data Explorer**, leveraging **GPT** technology to implement **AI-driven** query generation. This enhancement significantly improved **data querying** capabilities and user engagement by enabling intuitive, **natural language processing** of queries and automating complex data interactions within the platform.
17. Coordinated the migration of the CosmosDB Azure Portal to a React-based **architecture**, integrating **Redux** for advanced state management. Utilized **React Hooks** for **lifecycle management** and **Context API** for state distribution across components, effectively doubling interaction efficiency and enhancing user experience by streamlining UI responsiveness and maintenance.
18. Developed the CosmosDB Portal experience for Hyperscale (Citius) **PostgreSQL**, demonstrating a user-centric approach to design and requirement gathering. By analyzing user feedback and anticipating user needs, I introduced a PostgreSQL API for **Cosmos DB**, which aligned with user workflows and data management preferences. This initiative successfully increased Cosmos DB sign-ups by 120,000.
19. Implemented a **C#**-based proxy backend application for the **integration** of the **Cassandra API** shell into the Cosmos DB Data Explorer, facilitating a seamless and interactive environment within the Azure Portal, and eliminating the need for third party dependencies.

GE Healthcare *Senior React Developer*

Remote June 2018 - May 2021

20. Developed an MVP application from POC, architecting and scaling **microservice architecture** to handle complex processing and transferring of HIPPA compliant radiology data. Conducted meetings with stakeholders and users to successfully transform **business** problems into technical solutions to streamline the processing and **analysis** of CT scans across multiple hospital networks.
21. Spearheaded the design and **deployment** of a comprehensive on-premises **service mesh** solution, enhancing **microservice architecture** scalability and reliability while enabling precise traffic management, **service-to-service security**, and observability across our enterprise network.
22. Effectively leveraged **Java** and **Java Spring Boot** utilizing **Spring Data** for seamless ORM, **Spring Security** for robust authentication and authorization, and **Spring MVC** for responsive **RESTful Services**. Championed the **implementation** of monitoring **services** to better understand our users and infrastructure need with **Netflix Eureka**.
23. Led the front-end development of a scalable **web** application using Angular, focusing on crafting dynamic, user-friendly interfaces with **Angular Components**, and managing state and **APIs** with **RxJS** and **Angular Services**. Implemented **Angular Router** for efficient navigation and **lazy loading**, significantly improving load times and user engagement. Optimized application performance and maintainability using Angular's built-in change detection and **Ahead-of-Time (AOT)** compilation.
24. Developed event-driven microservices for artificial intelligence (AI)-driven post-processing of medical images on the utilizing **Spring Kafka** for communication between microservices
25. Encouraged **software** best practices such as DRY and SOLID principles, **continuous** improvement and change management to streamline **software deployment** and release management by implementing infrastructure-as-code for **Jenkins** CI/CD processes using **Groovy** and **Python**.
26. Fostered a collaborative development environment by mentoring juniors, review pull requests (PRs) and pushing for a culture of technical democracy where every engineer's input felt valued and appreciated.
27. Built and integrated the test **automation** infrastructure using **Selenium**, **Cucumber**, **Karate**, and **Jenkins** for **integration** tests, **Jasmine** and **Karma** for **unit** tests.
