

Everton Elliott, ITIL v3

eveton@yahoo.com

[\(703\) 731-0165](tel:(703)731-0165)

Senior Configuration Manager

Summary:

- ITIL Certified and exceptionally skilled Configuration Management professional with an extensive background in Change and Configuration Management, and strong knowledge of the software development lifecycle.
- Familiarity with SAFE Agile, sprint planning, Product Management, QA & UAT testing cycles
- Experienced in creating policies and procedures for performing duties related to change, release, and build management, and recommending process improvements, leveraging ServiceNow and BMC Remedy.
- Exceptional knowledge of Project management and in implementing process improvement practices with the ability to prioritize, adhere to timelines.
- Strong problem-solving and interpersonal skills to ensure project team members are working collaboratively to execute the change management plan.
- Excellent organizational skills.

Technical Skills:

Tools:

ServiceNow, JIRA, Confluence, Dimensions, SharePoint, PHIRE, Oracle PeopleSoft Feature Map, BMC Remedy, CMDB, Serena TeamTrack, PVCS, Version Manager, Subversion (SVN), Quest Software Foglight, Oracle databases, Requisite Pro, MS Project, Visio, UML, Relational Databases, Data Warehousing, Microsoft Office Suite (PowerPoint, Excel, Word, Outlook, Visio), DSS, GitLab

Web Applications:
WSDL)

Visual Studio.Net, Dreamweaver, Web Services (XML, SOAP,

Languages: Visual Basic.NET, SQL, XML, JavaScript, HTML, DHTML,
Perl
Operating Systems: Windows 11

Certifications:

ITIL v4 Foundation Certification

ITIL v3 Foundation Certification

BMC Certified Administrator: BMC Remedy CMDB AR System 8.0

Education:

Master of Science, **Management** of Information Systems Technology, George Washington University, Washington, DC - 2005

Bachelor of Science, Mechanical Engineering, Florida A&M University, Tallahassee, FL - 1997

Experience:

Premier: United States Department of Transportation (DOT)

Senior Release Manager

August 2023 – Present

- IT SME with deep Agile experience in **ServiceNow** Platform.
- Experienced in Service Catalog, Request Fulfilment, Incident, Problem, Service Asset and **Configuration**, Knowledge **Management**, Service Portal, Survey Management, Service Now Mobile Capabilities to standardize processes and align IT services with business goals.
- ITSM **Configuration** & Asset SME consulting on **ServiceNow** CSI program
- Well-Versed SME (Subject Matter Expert) on Incident **Management**, Change **management** process and the Knowledge article.
- Provided expert guidance during the project life cycle, serving as **ServiceNow** subject matter expert (SME)

- Forward Plan the release windows and cycles across portfolios.
- Lead the release and transition of software projects which includes managing the documentation, schedule, and validation of the process.
- Direct budget and assist in project planning for release packages
- Create Change Request using **ServiceNow**, to manage, document and track release packages.
- Use **ServiceNow** to approve and manage Software Installation Requests from DOT customers.
- Manages the DOT Definitive Media Library (DML) that controls software **configuration** items (CIs) which are approved for deployment.
- Create and manage Windows Operating System Image Manifest
- Oversees release content and effort based on the service request backlog, pending service requests, third party applications, or operating system updates.
- Conducts, and leads Release Readiness reviews, Milestone Reviews, and Business Go/No-Go reviews.
- Performs Release Reporting to DOT stakeholders during daily or other status meetings.
- Develops and maintains the Release Schedule for all core services and ensures alignment across key partners and vendors.
- Maintain a Release repository and manage key information such as build and release procedures, dependencies, and notification lists.
- Maintain thorough records and documentation to identify and implement solutions.

Nakapuna: United States Navy

Senior **Configuration** Manager

June 2023 – August 2023

- Created and tracked Software Changes using **ServiceNow** as the ITSM tool to manage these changes through the development life cycle.
- Create Changes using **ServiceNow** to deploy Standard and Normal software release packages
- Managed individual release projects using the SDLC methodology by developing schedules and charts to plan and subsequently report progress within the project environment.
- Lead release and deployment calls of software projects which were done weekly and monthly.

- Present daily release and deployment via status calls to more than 100 stakeholders
- Manages flow of multiple releases as well as troubleshooting issues by coordinating with stakeholder teams as needed.
- Report Status of vulnerabilities using Post **Implementation** Review and Lessons Learned documentation.
- Manages the software and hardware baseline as the Gatekeeper of what goes into production
- Support **configuration** identification by maintaining a database that documents all software and hardware (Dimensions, PHIRE, Feature Map, Jira/Zephyr, etc.) in use by NP2
- Support meetings or SETR events that allow Government personnel to decide when and if new software and hardware releases are to be implemented for NP2
- Perform status accounting by recording and reporting the status of all NP2 related software and hardware. Status accounting shall include record of purchase, number of licenses, when licenses must be updated, projected costs when updated, number of licenses implemented, and where those licenses have been implemented.
- Facilitate communications with all software and hardware stakeholders to ensure software and hardware actions efficiently and effectively enhance NP2's overall goals.
- Ensure all significant software and hardware defect are tracked and documented
Perform revision **management** for all electronic documents, (briefings, reports, worksheets, charts, draft forms, QA review summaries). Maintain and update **CM** policies, procedures and standards.
- Use a decision support system (DSS) to compile **configuration** items information and data and synthesize it into actionable graphical reports.
- Identify and maintain the original **configuration** of requirements documentation, design documentation, software, and related documentation.
- Train personnel on proper **configuration management** processes and **practices**

BAE Systems

US Department of Justice

Senior Change and **Configuration** Manager

August 2020 – April 2023

- Lead the release and transition of software projects which includes managing the documentation, schedule, and validation of the process.

- Manage the Release Phases and Release Tasks for in-flight Releases.
- Use ServiceNow, to manage document storage and tracking.
- Conduct Post Implementation Review including Lessons Learned documentation.
- Conduct process analysis, workflow documentation, detailed data analysis, change management, and configuration management activities.
- Use GitLab for online code storage and capabilities for issue tracking
- Managed the development of software requirements and test case management using Jira
- Use Jira to build Kanban boards to visualize workflow and maximize efficiency.
- Conduct process analysis, workflow documentation, detailed data analysis, change management, and configuration management activities.
- Responsible for coordinating with internal stakeholders and external vendors to gather requirements and execute cyber related tasks
- Help guide systems through the development, test and production environments
- Lead planning, analysis, and execution of the development of a team solution for a Configuration Management Database (CMDB).
- Drive utilization of the Configuration Management Database (CMDB) to baseline, identify, track, document, audit, and control the functional and physical characteristics of the system design.
- Plan, schedule, and drive implementation of configuration and change management processes to support development of systems, products, and processes.
- Perform periodic configuration status accounting through audits of systems baselines and associated configuration related content.
- Catalog, track, and trace configuration items using attributes and schemas.
- Develop, coordinate, and maintain policies and procedures in support of the Functional Control Board (FCB) and the Change Control Board (CCB) implementation and execution.
- Oversee team that facilitates the FCB & CCB process and meeting.
- Provide training to personnel on change and configuration management related work instructions and processes.
- Lead process improvement and special project activities requiring engagement and collaboration with a variety of functional teams

- Energized when faced with complex technical challenges and diligently work to identify creative solutions.
- Ability to perform high quality work, both independently and with a team, in a fast-moving environment.
- Ability to plan and prioritize tasks to successfully meet/exceed customer expectations.

GEICO, Washington, DC

February 2020 – February

2021

Senior IT Contracts Administrator

- Responsible for negotiating contracts for IT hardware, software, and professional services.
- Communicates with senior **management** and responds to their inquiries and requests.
- Responsible for verifying the completeness and accuracy IT contract requests to ensure adherence to the GEICO's policies, procedures, and processes.
- Negotiate with vendors to more effectively position GEICO to receive the **best** value proposals for the corporation.
- Perform audits and reports of IT contract requests and software inventory.
- Communicate IT contract issues with vendors and diverse audiences.
- Create high level **workflow** for IT contract **management** process.
- Responsible for designing and implementing IT contracts database.
- Help with hardware and software license tracking.

Security and Exchange Commission (SEC)

Senior Change Manager

October 2014 – February 2020

- Created and managed Software Change Requests using **ServiceNow**, to manage the process from initial request to post-delivery customer support activities.
- Responsible for the facilitation of the **Configuration** Control Board (CCB) as well as drafting the meeting minutes.
- Extensively worked with CMDB Asset, Change and Contract **Management** modules, as well as Sunflower databases to successfully automate the IT asset **management** and software **management**.
- Developed and maintained **Configuration Management** program artifacts, to include but not limited to, presentations, models, operating procedures, and **training** materials.

- Administered the Configuration Management SharePoint Access accounts and the ServiceNow Change group accounts.
- Responsible for User acceptance Testing for changes made to the Change Management tool set.
- Provided weekly and monthly metrics detailing Change Management activities.
- Provided operational support for Configuration Management functions, to include the System Development Lifecycle (SDLC).
- Assist the development teams with the design of release packages for deployment.
- Responsible for the review and validation of all Change Requests (CR) to ensure adherence to the Security and Exchange Commission (SEC) policies, procedures and processes following ITIL and ITSM best practices. This included open communications for requests of status and assisting with supplying direction and gaining approvals.
- Worked with change requestors and change owners, answered questions and gave guidance within the Change Process and Change lifecycle.
- Performed audits and reports of Software change requests and software inventory.
- Verified the completeness and accuracy of release libraries before implementation, and ensured that correct versions of programs were included in specified releases.
- Managed hardware, software and firmware changes to the Security and Exchange Commission's (SEC) IT environment.
- Distributed Change Management communications to ensure various teams are aligned on the Change Management process.
- Responsible for maintaining the SEC Configuration Management Library to include archiving, auditing and reporting monthly metrics.
- Developed hardware and software version control processes, policies and procedures and ensured that they were followed on hardware and software development projects.
- Responsible for working with SEC personnel to create, populate and archive Software Release files.

Computer Science Corporation (CSC)

Senior Asset Manager

June 2011 – October

2014

- Led the Asset Management (AM) and Configuration Management (CM) teams, while providing ITIL aligned services in a highly leveraged cross function ITSM environment on

the behalf of the US Department of Homeland Security and Transportation Services Authority, to ensure the deliverable of software licensing and Asset Management business services in support of client requirements in a data center operations environment.

- Facilitated and managed the overall requirements of GFE accountability (by way of Configuration Management plan, policy and procedure documentation development, planning, acquisitions, procurement, operations, maintenance and disposal) to fully execute service level agreements.
- Leveraged BMC Remedy CMDB Asset, Change and Contract Management modules, as well as Sunflower databases to successfully automate the IT asset management and software management contract and physical accountability processes, on the behalf of the USV client and corporate endeavors.
- Analyzed, developed, implemented and monitored key phases of the Asset Management and Configuration Management process to properly control, manage, audit and decommission the status of all configuration items (CIs) within the client's data center environment.
- Utilized ServiceNow to manage software and hardware change requests.
- Oversaw the contract agreements for hardware and software licensing support and/or maintenance. Such exercises included acquisitions, compliance, life cycle planning and financial cost analysis and reconciliation with the Service Delivery Management (SDM) and Program Control Office (PCO) leads, through the use of both automated and manual Asset/Configuration functionality/toolsets.
- Researched and examined estimates of material, equipment services, production costs, performance requirements, and delivery schedules to ensure accuracy and completeness while identifying savings opportunities for renewals, software licensing, and services.
- Provided team leadership and oversight on project deliverables for the Asset Management and Configuration Management teams, while managing contracts and customer relationships to maximize value creation and costs for acquisitions management, software licensing, maintenance, and service offerings.
- Managed software/hardware assets by monitoring software compliance, change management, managing license data, procurement processes, blanket purchase agreements (BPAs), and contract validation, coordination and updating license data.

- Effectively generated, managed, maintained and/or adhered to a series of governing policies that pertain to software and IT asset **management** concepts and processes (to include Federal Acquisition Regulation (FAR)).
- Facilitated team meetings with senior **management**, change **management** board members (TRB/CCB), Asset **Management** team members, federal clients and vendors through the use of strategies and tactical planning to resolve operational, financial and maintenance issues.
- Served as the point of contact for internal and external clients, vendors and support teams to resolve technical issues while building customer relationships in concert of service delivery processes.
- Generated and provided SLA reports and analysis on a quarterly and monthly basis identifying expenditures and Asset **Management/Configuration Management** reports by way of pivot tables/charts, diagrams, presentations and additional online resources, where applicable.
-

Computer Science Corporation (CSC)

Senior Business Analyst

May 2006 – June

2011

- Computer Science Corporation (CSC), Arrival Departure Information System (ADIS). This system is used by the Department of Homeland Security to determine if non-US citizen entering the United States have overstayed their visa, by matching arrival and departure records using biometric and biographic data. Specific duties and accomplishments include:
- Managed individual release projects using the SDLC methodology by developing schedules and Gantt charts to plan and subsequently report progress within the project environment.
- Facilitated JAD sessions/design and requirements gathering sessions, to define functional and data requirements.
- Elicited requirements using interviews, document analysis, requirements workshops, storyboards, surveys, site visits, business process descriptions, use cases, scenarios, event lists, and business analysis.
- Participated in the ADIS project acquiring CMMI Level 3.

- Analyzed the system to perform Business Rules updates in coordination with the system owner.
- Performed risk **management** and developed strategies to manage and mitigate risks using managerial resources.
- Created and managed System Change Requests using PVCS/Serena TeamTrack, to track the process from initial request to post-delivery customer support activities.
- Developed, Identified and maintained cross-function mapping through the Requirements Traceability Matrix document.
- Analyzed multiple functional areas and their interrelationships to perform Requirements Traceability Matrix analysis and updates.
- Initiated projects and systems change requests, including business case development, to improve unit capabilities and effectiveness.
- Generated and maintained documents including the Functional Requirements Document, Requirements Traceability Matrix Document, Business Rules Document, System Design Document and Interface Control Documents for all external interfaces.

General Dynamics Land Systems

Business Analyst

June 2001 – May

2006

- Gathered requirements from customers to create technical designs on multiple projects
- Documented and communicated requirements to customers and Systems Development staff using standard methodology/format such as Use Case to provide clarity.
- Created application process modeling utilizing UML diagrams created in Visio.
- Maintained data into Requisite Pro database.
- Created preliminary design concepts and drafted technical design documents.
- Maintained project schedule and resource allocation using MS Project.
- Independently managed the design details and oversaw the timeline of development projects.
- Developed performance and reliability analysis metrics on web portal use and problem reporting and resolution.
- Assisted in the development of solutions that addressed and satisfied needs and/or problem areas of the user community using Lotus Notes help request system.

- Identified, developed and implemented new technology processes and procedures for current programs and future business opportunities.
- Developed SQL database to support Manufacturing assemblies and process sheets.
- Developed new Intranet web pages as required to support the workforce using Dreamweaver, Hand coding and ASP.net.

Boeing

Systems Engineer/Web Developer

August 1997 –

May 2001

- Built and maintained web base application and intranet web site to support
- F-18 Fighter Aircraft forward fuselage design team. Analyze engineering **practices** in order to recommend improvements.
- Conceptualized, created and managed the Engineering Intranet Web Site.
- Directed web site content and specifications gathering from customers and clients.
- Presented web site concepts to customers and clients in monthly web development meetings.
- Provided customer and client technical support and **training** for Web site administration
- Created custom menu bars, navigation controls and forms using JavaScript and Perl Script.
- Resolved non-conformance Engineering issues with F-18 E/F forward fuselage parts using systems such as the Closed Loop Evaluation and Reporting II (CLEAR II).
- Performed investigation and corrective actions through root cause analysis for any structural production problems that may affect F-18 parts.
- Wrote and reviewed standard operating manufacturing procedures and process specifications.
- Responsible for writing and reviewing work instructions for the F-18 Fighter Aircraft using legacy systems such as Automated Tooling Orders (ATO), Large Order Production System (LOAPS), Automated Planning System (APS), Engineering Document Storage System (EDSS) and Integrated Manufacturing and Control Systems (IMACS)
- Updated and maintained the Manufacturing Engineering Department Web Site.
