SYSTEMS ENGINEER

- IBM Enterprise Computing
- Data Center Migration & Consolidation
- Information Security & Audit
- RFP Writing & SOW Preparation
- BYOD Security
- Microsoft Office 2007, 2010 & 2016
- Sarbanes-Oxley
- Government Compliance - FISMA & FISCAM
- Quality Assurance & Testing
- Project Management
- Desktop Technology - Intel x86 & 64 CPU
- Mainframe - z/OS, z/VSE & z/VM
- Data Center Security Compliance and Audit
- STIG Sales Support

MISSION STATEMENT:

Provide quality technology and expertise to all my clients with commitment to successful project completion. My professional experience incorporates Legacy, Open Systems and Emerging technology bringing benefit and best practice methodology.

My future roadmap includes obtaining SAS Institute Certification with Visual Analytics, Cloud Security, Blockchain and Data Science tools - key credentials for an Information Technology practitioner.

Expertise:

LEGACY, OPEN SYSTEMS COMPUTING, MIDDLEWARE, SOLUTION INTEGRATION, MICROSOFT and IoT.

EXPERIENCE

Platinum Precision Software Inc. New York, NY

4/2002 – Present

Principal Consultant - Information Security and Systems Engineer

Principal Role - Professional Services Engagements:

Information Security Engineer with Auditor background - support client projects using IBM RACF, Computer Associates ETrust Top Secret and ACF2 (project and staff augmentation). Knowledge referencing National Information Exchange Methodology (www.niem.gov), NIST800-53, Department of Defense STIG, configuration, computer forensics and best practices.

Systems Engineer - maintain software configuration of IBM z/OS platform using TSO, ISPF, JCL, Assembler Language, SMP/E and vendor management tools. Perform configuration and customization of commercial-off-the-shelf (COTS) software products and work with vendor to implement any required patches and maintenance. Manage highly complex hardware and software technology. Determine hardware resource requirements necessary to maintain and/or expand service levels or tune hardware and software components for optimum performance

Contributing problem determination as a key SME who assists with data center and operations staff as required. Test and diagnose component issues with GTF, IPCS and VTAM Trace. Manage deployment of IBM and vendor software on z/Series processors with testing, proof of concept and activation into production mode. Scripting using Rexx Language, CLIST and Batch TSO. Basic SAS Programming with use of SAS MACRO language, ODS and PROCs for report generation.

Key projects:

- Served as **Project Lead** in the completion of medium to large-scale technology upgrade implementations between 1984 to present with IBM, Symantec, Canadian Federal Government, Lockheed Martin and Amdahl Fujitsu, Verizon, Frontier Communications
- Key contributing **RFP Proposal writer** for a winning engagement \$5.4 million data-integration project for Michelin to consolidated data center technology between US and European locations, including ACF2 to RACF migration.
- Contributing **Pre-sales Systems Engineer** for data center management and facilities management offerings in both government and private sectors.
- Training and Knowledge Transfer:** Enhanced end users' understanding of mainframe architecture systems by conducting pre-implementation workshops, delivering group and individual training sessions and creating user-friendly training materials for client post-engagement.(Lockheed Martin, IBM, Fujitsu Amdahl)
- Storage Backup and Recovery Mainframe:** Configured, managed and analyzed large scale DASD and Tape environment using DFDSS, DFHSM, VSAM (IDCAMS) objects, Master and ICF Catalogs, Computer Associates software tools for utilization and capacity reports. Segregated SMS and non-SMS storage volumes' full volume backup; ensured nightly execution incremental backup with production operations.
- ACF2 and Top Secret Migration to IBM RACF.** Using IBM's proprietary software tool, from Sandbox RACF environment, DevOps testing with all technical and business areas to final Production deployment.
- Storage Backup and Recovery Microsoft Desktop/Server:** Provided disk management of Intel Core 2 Duo mobile personal computers (Windows 7 Ultimate 64-bit and SuSE Linux v11). Mobile computers' configuration used Intel RST (Rapid Storage Technology) with AHCI bios enabled, Turbo Memory mini-PCI (Robson), SeaTools report utility, Acronis True Image, Lenovo Thinkvantage Recovery. Enabled mobile laptop SATA-2 Seagate Momentus XT hybrid SSD HDD exploiting 2nd generation 3Gb/s interface. Examined performance data access event log data with Windows 7 Microsoft WMI console, Norton Utilities and open source CrystalDiskInfo. Maintained standards-based recovery of installation media and HP software setup directory structure allowing for full system, bare-metal recovery.
- Mobile Computer Support** - configure HP and Lenovo laptop PCs with enablement of ACHI SATA to accommodate SSD storage hardware HDD; enable vPRO capability with Intel AMT and Trusted Platform Module for remote client support; BIOS upgrade using HP and Lenovo flash software. Install WWAN M2M mini PCI hardware for CDMA and GPRS data connection.
- Network Engineer** - Application Development support: IBM subject matter expert role for MCI (now Verizon) long distance billing application rewrite; client engagement required Netview, VTAM SNA, FTP methodology, SNA transport using IBM and third party tools (Netview Distribution Manager, NDM Connect Direct). Assisted with CICS, IMS, DB2, flat file feeds, COBOL, source code management, SAS, Assembler proprietary software review during Requirements Definition phase of development effort. Assisted in review of Information Maps showing data flow between Ericsson switch collection of CDR (call data records), CICS collection of long distance billing data and feeds into fraud detection systems. Utilized SDLC with a strong emphasis on use case testing and Quality Assurance.
- BlackBerry RIM Support** - BlackBerry smartphone handset "modification", backup of user contents, and restore using Desktop Manager. Enable BES features, handset unlocking and factory hard reset. Configure port settings for BIS/BES. Maintain BlackBerry APP Store configuration. Configuration of unlocked RIM device types including 4G LTE.

Client Consultant Project Timeline:**HP Field Services – Business PC Upgrade
2010-Preset****On-Call Resource for UPS Retail Stores**

Replace POS (*Point Of Sale*) UPS Retail PC hard drive. Configure network to new desktop Windows operating system "build" from HP Business machine. Execute test case results with remote deployment team. Verify Windows Operating system functionality, BIOS firmware and IP endpoint security authentication to POS Server.

Advisor - Small Business and Consultants**May 2014 to Present**

Assist consultant team with preparation of Statement of Work content review focusing on Executive Summary, Scope of Project, key deliverables, timeline, skills, pricing (compensation), procurement and engagement goals. Review engagement's Individual consultant(s) resume review for incorporating skills, expertise and technology acquired from previous projects. Business network mentoring. Collaborate building professional profiles for practitioners on LinkedIn, Manta, GIT Hub, ConnectWise and Quora.

Volunteer - New York City SAS Users Group 2015-2016 Long Island City, New York

AIG - RACF and CA-Top Secret Architect September 2009-December 2009 Livingston, New Jersey

Information Security Engineer - Subject Matter Expert advising corporate policy and operational procedures for ensuring protection of corporate mainframe, midrange, virtual server, desktop, key technology assets and data. Enforcement of compliance measures which protect mainframe operating systems (z/OS, AS400, Linux, Unix, Windows), client production data and executable program files. Monitor unauthorized access and modification. Programming using SAS, SyncSort, DFSORT and Rexx to report on security data. Writing and presentations to C-level and senior management audience. Mentoring to junior and intermediate staff persons. SAS Programming using base SAS and MACRO developing reports of CA-Top Secret and RACF security metadata from extracted flat datasets. Administered mainframe's PKI management of ownership and permissions across z/OS LPAR images. Coordinate RACF and CA-Top Secret security support for application migrations, product rollouts, and contingency testing.

Ernst and Young - CMS/HHS IT Audit Team**March 2009-June 2009 Baltimore, Maryland**

Subject Matter Expert - IBM Mainframe Security annual FISCAM/FISMA 2009 compliance review. : Examined federal agency's security compliance in a large scale enterprise environment consisting of z/OS, z/VM, virtual Linux, Unix Server clusters, and Windows client desktops. Identified key review areas using NIST 800-53. Evaluated agency security management at all mandated levels which included entity-wide (site), system, and business process application. Report findings identified vulnerability and deficiency areas in Medicare's data center. Using federal government DoD STIG guidelines, was Subject Matter Expert who confirmed compliance to NIST 800-53 requirements. Security management software consisted of IBM's RACF, Computer Associates' CA-ACF2 and CA-Top Secret for mainframe platform production, test and sandbox environment. Evaluated regulatory compliance for Medicare private insurance companies SFTP compliance.

State of Oregon - RACF Security Consolidation**September 2008-March 2009 Salem, Oregon**

RACF Security Impact Study - examined technical and management requirements to combine/ consolidate multiple RACF security database across six z/OS LPAR images. Examined using RRFs, RACF database copy/merge utility software to produce a common Group tree hierarchy, SETROPTS configuration, privileged user accounts and exits. Wrote SAS v9r2 programs that examined IRRDBU00 extract files and produced ad-hoc reports of historical and live metadata isolating data ownership, permissions by group and user, SURROGATE user ids, z/OS Started Task Id configuration, DB2, IMS and CICS. Reported STIG compliance and areas of improvement to Executive Sponsor.

IBM Global Services - Caremark z/OS Data Center Migration June 2008-August 2008 Scottsdale, Arizona

Mainframe z/OS upgrade of MVS, CICS, DB2, IMS and third party software. Provide Subject Matter Expert support for CA-ACF2 to RACF Security conversion to Caremark and ACS Outsourcing staff members. Used HCD, SMP/E, TSO, ISPF, JES2, NDM Connect-Direct. Subject Matter Expert for Caremark's ACF2 to RACF migration (sandbox and production). Support and maintain: IBM z/OS environment using SMP/E, TSO, JCL, ISPF, HCD, Assembler programming, SVC (IBM, ISV and internal), JES2, Proclib maintenance, Unix System Services, HFS, NFS, IPCS, VTAM, third party vendor methodology (Computer Associates, Oracle, SAP). Preplanning research with IBM and OEM vendors, create Sandbox LPAR platform, coordinate user community testing and change control deployment into production mode. Maintained Syslog console, SMF and Netview event log data with retention periods conforming to client information security standards. **Storage Systems Assurance:** In a architect role, developed storage strategies with disaster-recovery measures for client firms. Addressed client business and technology requirements with a service level agreement approach operational databases and operating system disk storage with a solution that guaranteed recovery performance and high availability (Used FDR/ABR, DFDSS and DFHSM) for mainframe hardware, application and database backup protection as Caremark transitioned from using outsource provider to in-house operations of its storage management. z10 Processor: worked with team using HCD to examine new z10 processor. Made recommendation of testing of Caremark Linux, Java, Websphere and Unix System Services applications requiring RACF protection replacing CA-ACF2 (used by outsourcing providers)

CA-ACF2 Security Assessment - CIGNA Connecticut**September 2007-April 2008 Bloomfield,**

Conducted infrastructure security audit - technical review targeting configuration of z/OS LPAR images protected by CA-ACF2 running batch, TSO, Unix System Services, CICS, IMS, DB2, J2EE applications, Websphere and development platform. Constructed areas of review using technology defense in depth criteria advised by Department of Defense STIG for z/OS and z/Linux. Advised client to implement SAF ACF2 protection of Unix System Services files, directory structure and Super user credentials, including ACF2 SMF record logging. Submitted report of

findings and recommendations to executive sponsor. **Application Security Engineer review activities:** reviewed SDLC cycle with **development** and **database support** teams to secure **project** LOB applications using new z/OS features (SAML, two factor authentication, role based **access control**, centralized **management** of entitlements). **Security Compliance:** Modernized **information security** policy and procedural standards for z/Linux file system hosting Websphere, application production and **development software** to maintain segregation of data for a major insurance company and CMS Medicare claims provider. Delivered written policy and standards, within technical spec. Incorporated SAML as an application **security** best practice for JAVA API used in **line** of business applications **Unix System Services:** Recommended that all USS files, directories and resources be fully integrated with CA-ACF2 replacing ACL protections. Recommended that USS applications integrate CIGNA **security** standards for ACF2, **encryption** and secure file transfer.

Citicorp - Role Base **Access Control** Entitlements New York

October 2006 - February 2007 New York,

Provided subject matter expertise to a Citicorp **project** vendor building an entitlements solution using CA Compliance to manage more than 145 data centers running **RACF**, CA-ACF2 and CA-Top Secret with single-sign-on and organizational departmental function using SOA . Examined audit and **security administrator** reports showing bank's mainframe controls, including user account naming convention. Reviewed Rexx, Java API invocation, SQL queries and **SAS** programs **reporting** on Citicorp **security** protection and metadata. Reviewed operational use of secure FTP (sftp) and NDM Connect Direct for data transfer. Contributed use case documentation for entitlements requirements definition and proposed testing. Evaluate single sign-on proof of concept using business role entitlements, considering corporate identity **management** standards.

Symantec Professional **Services** - National Accounts

November 2005-August 2006 USA

- **Government Security Assessment - State of North Carolina** - Symantec team Subject Matter Expert covering IBM Mainframe for a review of infrastructure **security**, **database**, LOB application-level **security** and regulatory compliance procedures to outside federal and state agencies (IRS, SEC, CTC, CMS/HHS, State of North Carolina). Assessment **project** tasks included review of clients' **computer** hardware, offshore **development**, outsourcing provider(s), **database** environment, **network** topology (**TCP/IP** and **SNA**), key LOB applications, z/OS processor virtualization, **disaster recovery**, recovery, virtualization and **security** product configuration/controls. **Project** plan was incorporated focus on utilizing ISO27001 best practices for client **management** with suggested approach to mitigating risks and exposures by a remediation plan (including data center change **control** impact to technology platform and staffing). Written report content submitted to engagement's Executive Sponsor.
- **Host Security Technical Audit - Private Sector companies** - Participated in technology focused audit targeting infrastructure **security**; examination of Sarbanes-Oxley compliance of client's technology. Examined compliance issues for PCI applications (incoming payment cards). Reviewed client's infrastructure and key LOB application **security** (all operating system platforms). Presented assessment **SAS-70** Level 2 due diligence findings with executive sponsor and stakeholders. Remediation planning with client **security** staff for known issues requiring improvements. Recommended to client **IT security** staff using ISO27001 and Dept of Defense STIG as a checklist for enabling all possible controls by operating system, **network** and **database** platform. Identified exposures to potential **information** loss and data harvesting by internal users with a focus on mandating SFTP (Secure File Transfer Protocol) as a replacement for FTP (default FTP). Examined data ownership assignments, inclusion of enterprise role base **access** entitlements, absence of role based **access** controls and service level users in production and **development** platforms. Examined industry-known risks and test controls associated with system-level and application data integrity. Develop/enhance audit plans, review programs and examinations to evaluate **control** areas for business processes and technology operations. Analyze findings and testing results; present findings in a formal report and conduct end of engagement meeting with executive sponsor.
- **IT Regulatory Compliance Audit** - Independently identify and apply specialized industry best practice methodology (COBIT, ISO27001, NIST800-53, Department of Defense STIG) to achieve **information** assurance objectives. Take a leadership role during each engagement with identification of regulatory compliance issues related to enterprise computing. Examined compliance in operating system configuration files, parameters and reports with client technical stakeholders. Reviewed data center change **control** level of effort and impact with client **management** and technical stakeholders for remediation recommended actions.
- **PKI Management - IBM z/OS Mainframe** - Examined public and private key store, **management**, data ownership, **access control** permission(s) in all three external **security** subsystems (**RACF**, CA ACF2 and CA ETrust Top Secret) for Symantec clients.
- **DB2 Security Controls** - Examined DB2 system configuration and clients' "defense in depth" of **RACF**, CA-ACF2 and CA-Top Secret **database** protection of programs, views, privileged user activity, logging and operational controls.

- **Security Technology Executive Report:** Prepare written work paper and executive summary content identifying client infrastructure findings, briefing papers, and other documentation supporting security findings and remediation steps for SAS70 level 1 or level 2 audit examination.

IBM Global Services - Carle Hospital (IBM Customer) December 2004-February 2005 Urbana, Illinois

Provided Carle Hospital's Technical Support group (MVS, CICS, DB2, Networking and Operations) with an in-depth information security review of RACF SETROPTS, configuration of z/OS subsystems and products, CICS transactions, DB2 security interface, Storage systems (DASD and Tape) and operations (System console). Review RACF DSMON for effective controls of APF Libraries, RACF Group Tree, RACF Global Access Checking Table, SMF security record capture, management of privileged user accounts. Provided executive sponsor with written report indicating successful compliance and areas requiring remediation, using NIST-800 and IBM best practices as a metric. Referenced Department of Defense STIG as a suggested guideline for in-house monitoring between external security audits. Identified system level change control tasks for restriction of Started Task and SURROGAT RACF user definitions to appropriate staff by effective use of Group connect(s).

PWGSC - Canada Federal Agency August 2003-April 2004 Ottawa, Ontario

Led a key Canadian project: examined PWGSC agency's twenty-four z/OS LPAR images protected by RACF and CA-Top Secret; z/OS subsystem components consisted of DB2, IMS, CICS Transaction Server, CICS Gateway Server, Websphere Application Server, HFS, Unix Systems Server, CA-1 Tape Management, DFHSM, Netview, Communications Server. Managed a team of SAS developers querying common Started Tasks, RACF Groups, RACF users, CA Top Secret ACID, RACF Class Descriptor Table and ICF Catalog HLQ values for protected/unprotected resources. Examined LPAR images' catalog structure for unprotected HLQ values (LOB qualifiers and TSO/CICS user ids).

Special area of review examined network controls, secured data transfer (inbound/outbound), PKI implementation, avoiding data harvesting by intruders and audit control improvement using SAF (RACF and CA-Top Secret resource protection).

HIP Insurance June 2003-August 2003 New York, New York

Completed a RACF security assessment for HIP that reported all IBM subsystem controls, RACF SETROPTS, Started Task Table (and resource class) user accounts, privileged accounts, CICS, DB2, IMS, Batch production, QA certification, Change Control, system security exits and management of provisioning activities. Examined network management, including mandated encryption of batch file transfer of outgoing and incoming data. Submitted written report of findings to executive sponsor identifying compliance success factors and areas requiring improvement. Used RACF DSMON, CA Audit, Vanguard Integrity Suite, Fileaid, SMP/E and IBM Health Check. Programmed using SAS with extracted RACF IRRDBUoo data. Disaster Recovery planning to protect operating system, network, database, key business applications and console(s) for clients using SunGard and Iron Mountain. Technology tools included Innovation (FDR/ABR), IBM (DFHSM, DFDSS, RMM, Tivoli Storage Manager), Computer Associates (CA-ASM2), referencing SMF and Syslog console data and documentation of operational procedures.

Guardian Life Insurance June 2002-April 2003 New York, New York

IBM Security Engineer - provided senior level subject matter expertise for firm's Information Security organization covering mainframe compliance and MVS Systems Programmer. Maintained security configurations of three production designated LPAR images protected by two RACF databases, and a test sandbox LPAR image. Managed SETROPTS configuration, Started Task table / general resource class, privileged user account activity, CICS transactions, IMS controls, DB2 DSNR attach and sign-on, production FTP service accounts, SURROGAT user assignments, "Fire Call User Accounts" - Application recovery, Websphere application security, and Tier 2 help desk support.

CA-Top Secret to RACF Migration - worked with IBM Software Migration Office to test Guardian's acquired purchase of Berkshire Life's RACF definitions in sandbox prior to production cutover. Led cutover activities for IT Security resulting in a successful security migration combining two companies' data into a single RACF database, without any production or user 913 ABEND errors. Collaborated with DB2, CICS, Network, MQ and QA managers for Sandbox, Testing and final deployment into Production.

QA Standards - Data Ownership initiative replaced RACF dataset, general resource profiles and group tree content with "Group" permissions and ownership within the security database. Provide project support in a cross-functional environment for application and database security standards compliance.

STAFF

Amdahl Fujitsu

April 1995 - January 1999 Washington, DC

System Engineer and Project Manager

- **IBM Systems Engineer** maintained installation and configuration of MVS, VSE and VM host systems used for completing IBM's test cycle of Netview (tools: SMP/E, JCL, TSO, ISPF, RACF, VM CMS, VTAM, NCP, VSAM IDCAMS, CICS, ICCF, Assembler Language, VM/CMS). Completed IBM Quality Assurance regression and new feature test cases of Netview (NCCF, NLDM, NPDA, Terminal Access Facility, Log Management). Product installation, configuration, testing and deployment of Netview Access Manager (Tivoli Access Manager) in a multi-LPAR cross domain environment.
- **SAS Product Support** Installation of SAS product and components.
- **Data Center Consolidation** - provided hardware and software systems engineer support for customers moving data center operations and consolidating multiple centers into a single location. Reviewed storage, network, terminal emulation (3270), printers and console hardware needs for new location.
- **Technology Asset Management** - Software Licensing review of installed mainframe, midrange and desktop products; reviewed system library files and executables against licensing data (vendor invoice documentation) for consistency and delivered written report with new software licensing model resulting in annual renewal savings and reduced total cost of ownership. Examined perpetual, site, IBM Sysplex and CPU licensing models. SAS programming for client data center SMF reports.
- **RFP Proposal Writer** for commercial and government projects. Key 1996 "winning engagement" was a \$5.4 million data-integration project delivery in a fifteen month timeline for an automotive manufacturing firm that consolidated data center technology between US and European locations.
- **Pre-sales Systems Engineer** for data center management, specialized solutions offerings and hardware targeted to government and private sector customer accounts - National support resource.
- **Project Management** - develop staffing, resource requirements, key delivery dates, scope of technical deliverables and pricing for professional services engagements. Prepared plans in response to RFQ and sales inquiries from existing customers. Worked with Microsoft Project and Primavera.

CORE SKILLS

- | | | |
|--------------------------------|---------------------------|----------------------------|
| • z/OS MVS & z/VM | • SuSE Linux | • CICS Transaction Server |
| • Sysplex - Parallel and Basic | • Microsoft Office | • CICS Gateway Server |
| • RACF, CA-ACF2 & Top Secret | • Visio Professional | • LDAP |
| • TSO & ISPF | • Acronis | • CA-Compliance |
| • FTP | • FDR/ABR | • CA-Audit |
| • NDM Connect Direct | • Tivoli Storage Manager | • Vanguard Integrity Suite |
| • Tivoli Access Manager | • RMM | • SAS Base |
| • VTAM & TCP/IP | • SMF, MXG, RMF | • SAS MACRO Language |
| • Firewall & Routers | • Tivoli Identity Manager | • CA-ASM2 Storage |
| • VSAM & IDCAMS | • CA-1 | • CA-IDMS Database |
| • Tivoli Access Manager | • CA-7 & CA-11 | • Z/OS Assembler |
| | | • HCD |

- Microsoft Windows 7 & Vista
- Active Directory & GPO
- IOF & SDSF
- Tivoli NetView
- **Computer** Associates ETrust
- Microsoft **Project** Professional
- SMP/E
- Omegamon
- JCL
- JES2 & JES3
- Unix System **Services**
- DFDSS, DFHSM, ICKDSF
- IBM Global Parallel File System Platform
- Clist
- ISPF Dialog Manager
- RAID Storage Configuration
- Solid State Storage Hardware
- GitHub

SMALL BUSINESS AND HOME OFFICE **SUPPORT**

HP Business Laptops

Bios SETUP configuration, hardware, **software** and patches for HP Business Elitebook.. Review hardware maintenance specs for RAM upgrade, WLAN cards, WWAN enablement (and recommendations for selecting a mobile data provider), backup methodology, anti-virus protection, spyware prevention (using freeware and licensed products), logical **firewall** protection (Windows **Firewall** or anti-virus product), backup/**recovery**, disk **management** (including defrag). **Research** maintenance patches using HP SSD Manager, standalone download, Microsoft system update and hardware vendors; test patch application.

Directory **management** – segregation of Production, Test, Admin and User

HP Protect Tools **Security Suite**: installed, configured and activated on Windows Vista and Windows 7 laptop images.

Fingerprint Biometrics: Installed fingerprint device with HP driver with activated TPM 1.2

Intel PROWireless **Administration**: Install **Software** and Drivers WLAN and WiMax. Enable WiFi WLAN log collection to examine **network** connectivity for event log data (SIEM).

Network configuration: configure Ethernet/Gigabit and Wireless routers (with NAT **Firewall** enabled) ; supported Cisco Linksys, Netgear and D-Link devices with adjunct DOCSIS modems.

Lenovo ThinkPad

Lenovo proprietary utility **software**, configuration of laptop **security**, backup/**recovery**, Lenovo patch update, WWAN, WLAN, Intel vPro **security** biometrics, Cloud connectivity for Windows 7 and 10 Pro 64-bit

PRESENTATIONS

NYC **RACF** Users Group **October 2005 New York, New York**

"**RACF** IRRDBUoo Extract utility program as a **security** data mapping tool with **SAS**, SyncSort and Fileaid" with client case studies (Federal Government of Canada and Guardian Life Insurance

SHARE **August 2004 New York, New York**

"Using **RACF** IRRDBUoo IBM utility as a **security** business intelligence data mapping tool with **SAS**, SyncSort and Fileaid" Presented SHARE August 2004 session with Francis A. DeCostanzo

Vanguard Conference **July 2006 San Diego, California**

"Selecting an **Information Security** Vendor for Compliance Assessment"

"Using **RACF** IRRDBUoo as a key z/Secure **RACF** Business Intelligence tool with **SAS** Analytics and Mainframe's metadata"

EDUCATION & **TRAINING**

University of Hartford, West Hartford, CT

Matriculated study in Education and Music May 1975-May 1978

Northeastern University, Boston MA

College Intensive Certificate Course MIS COBOL Application Programming April
1981-July 1981

University of Connecticut, Stamford CT *Admitted*

Technology and General Studies - 4th Year Senior Baccalaureate Degree Program -
Plan Graduation 2023
