

Summary of Experience and Qualifications

6 + years of Proficient **Performance Engineer** experience in load, stress, endurance, and capacity **testing** for legacy mainframe and **cloud** applications. Strong experience in working with **performance test** plans, tase case, **test** strategies, **test** scripts, **test metrics**, and **test data**. Well-versed in APM and **Automated** load **testing** tools like **Dynatrace**, Application-Insights, Splunk and Site24/7 **HP Performance Center**, StormRunner **LoadRunner**, and **JMeter**. Successfully completed **testing** for **Azure mobile** migration ahead of time using **LoadRunner**, APM App insight, and **Dynatrace**. Excellent interpersonal and leadership skills, ability to handle assignments independently.

Professional Experience

AdilasTech

March 2023 till date

Performance Test Engineer

Responsibilities

- Crated scripts using load runner , virtual ser generator (VU Gen)
- Parametrized unique and dynamic content in the application scripts for real time evaluation using load runner
- Performed **performance testing** for **software** developed in **agile** methodology
- **Automated** and analyzed sever level utilization memory usage , I/O usage , TU , usage and network usage while using **performance test metrics**
- Executed load **test** on **web** -based and client based applications.
- Executed load **test** to verify application optimization using load runner controller
- Develop workload moiling and set up the **performance test** environment
- Developed a self-service framework to give developer **testing** access by clicking a button and **test** results will be sent through **automated** email as soon as the **test** is overusing Jenkins & **Performance Center**
- Performed root cause **analysis** of a system, and found the bottlenecks using **monitoring** tools, **Dynatrace** App insight, and Splunk.
- Involved in capacity **testing** while running the **test** results, analyzing the response time, server utilization, and error count.

MICHAEL AYO
michaelayo075@gmail.com

Amrock (Rocket Mortgage)
Performance Engineer
Detroit, MI

Dec 2021- Feb 2023

Responsibilities

- Worked with Architects, Ops, and **development** team to design/define workload model from production statistics
- Gathered Non-functional requirements, identifying key **business** scenarios and SLAs with the technical and **development** team.
- Developed **Test** Strategy/**Test** Plan for multiple projects.
- Developed Workload modeling and set up the **Performance test** environment.
- Gathered past application response time **metrics** and **business** transactions from the production support team for developing realistic **test** scenarios and load models.
- Used **HP LoadRunner** & controller for load **test**, endurance test, failover test, and stress **test**, and helped other teams to **test mobile cloud** enablement/migration.
- Created scripts using **LoadRunner** Virtual User Generator (VuGen)
- Parameterized unique and dynamic content in the application scripts for real-time emulation using **LoadRunner**.
- Help reproduce Production memory leak issues in the load **test** environment.
- Used **Dynatrace**, Application Insights, and Splunk for **performance** bottleneck **analysis**.
- Create multiple **API** load scripts using Json files and endpoints.

GEICO
Performance Engineer
Chevy Chase, MD

August 2016 – Oct 2021

Responsibilities

- Implemented the additional server in production, helped to handle the expected volume for the 2019 new year & saved an expected outage due to resource saturation using **LoadRunner**, **Dynatrace**, and Splunk
- Organized & tested the change (FIM Module enabling in Trend **Micro's** Antivirus) in load and verified the change not introducing the negative effect using **LoadRunner** and **JMeter**
- Worked with **monitoring** and **cloud** enablement team to make sure App insight & **cloud monitoring** tool are working fine using **Azure** App insight
- Completed **testing** for sprint 12/13 and **Azure mobile** migration ahead of time using **LoadRunner**, APM App insight, and **Dynatrace**
- Tested the newly added servers in the load environment and find out, the additional server positively affected the throughput and improved response time using **LoadRunner** and **JMeter**
- Performed **performance testing** for **software** developed in **Agile** methodology
- Worked on end-to-end application, response time, and established service level agreement (SLA) on each time point with an average of 96%-99% using **performance test metrics**.

MICHAEL AYO
michaelayo075@gmail.com

- Worked actively with the **development** team to implement **monitoring** tools, analyzed the potential bottleneck from the **test** result, and reported to the entire team to reduce the gap.
- Monitored application JVM, GC process, and resource utilization to identify memory leaks, network, deadlock, and identify redundant.
- Worked with operations to troubleshoot production issues and suggest quick turnaround solutions for short downtime.
- Created an application baseline format from scratch so that we can compare future releases in QC, Dev, and Prod Environment
- Improved current processes/practices available to Load **test** GEICO claim and service applications
- Created scripts with **Web** service, HTML protocols using **JMeter**
- Worked on capacity **testing** while creating scalability, stress, and high-volume **testing**
- Parametrized input **data** and correlated dynamic values that were sent by the server using **JMeter**.
- Prepared plan for future load **testing** projects and Ad-hoc requests/vendor engagements ahead of time to support GEICO corporate objectives
- **Automated** & analyzed server-level utilization, memory usage, I/O usage, PTU usage, and network usage while using **Performance test metrics**.
- Wrote new script, created new scenario that directly tested Diva-M **services** using IBM Watson
- Coordinated and led **mobile cloud** service migration from On-premises (java based) to .Net core **Azure** migration

Health and Human Services
Performance Engineer
Augusta, ME

Jan 2016 – Jul 2016

Responsibilities

- Worked on capacity **testing** while creating scalability, stress, and high-volume **testing**
- Created scripts with **Web** service, HTML protocols using **JMeter**
- Developed virtual user scripts using **LoadRunner** VuGen for various **business** processes, performed correlation, **data** parameterization, and customization of scripts
- Performed load and stress **testing** for various applications using **LoadRunner**
- **Automated** & analyzed server-level utilization, memory usage, I/O usage, PTU usage, and network usage while using **Performance test metrics**.
- Monitored resources to identify **performance** bottlenecks, analyze **test** results, report the findings to the clients, and provide recommendations for **performance** improvements as needed.
- Parametrized input **data** and correlated dynamic values that were sent by the server using **JMeter**.
- Created scenarios in **LoadRunner** controller based on the **test** profiles, fine-tuned the virtual user runtime, and scenario scheduler settings
- Involved in capacity **testing** while running the **test** results, analyzing the response time, server utilization, and error count.
- Compiled scenario **test** results and produced various reports using the **LoadRunner analysis** tool.
- Created detailed **test** plans and **test** cases from the **business** requirements documents.

- Involved in the design and **development** of complete **software** from requirements gathering to deployment
- Proactively caught **performance** issues that could cause production outages using **Apache JMeter** and completed the **development** by asking the load tester for **performance testing**.
- Prepared a complete reference document based on the knowledge transfer which consists of the functionality of the application in detail, installation details, question/answers log, and basic terms used in the application.
- **Automated** & analyzed server-level utilization, memory usage, I/O usage, PTU usage, and network usage while using **Performance test metrics**.
- Executed Load tests on **web**-based and client-based applications
- Executed Load **test** to verify application optimizations using **LoadRunner** controller
- Created a quick summary report after all **testing** has been completed, for results and findings document
- Analyzed **LoadRunner** on-line graphs/reports to check occurrence of **performance** delays, network or client delays, CPU **performance**, I/O delays, **database** locking, and other issues at the **database** server
- Manually performed UAT by writing numerous **test** cases and executing them to validate the results produced

Technical Skills

HP LoadRunner 12.02/ Splunk/ Dynatrace/ Load generator / HP Controller /Gmeter	Azure/ AWS Report	SQL /Oracle 2/JSON/ JAVAScript /XML	Windows System
HTTP/HTML/Web Service/ True Clint	SOAP UI/API	Agile SCRUM	Linux/ Citrix

Education

- Bachelor's Degree in **Business** and Public **Administration**
