

DAMI ASANIKE

Aws Cloud Solution Architect

AWS Cloud Certified

damiasanike82@gmail.com | ATLANTA, GA 30331 | Citizen

PROFESSIONAL SUMMARY

Solutions Architect with over 9 years of experience in Cloud and IT infrastructure on AWS and Azure platforms. Adept in providing innovative technical solutions, enhancing operational efficiency, streamlining workflow processes, and implementing process automation. Specialized expertise in business process design and architecting of enterprise cloud infrastructure.

IT Professional with an extensive understanding of DevOps principles to improve system scalability, availability, and reliability with expertise in provisioning and integrating cost-effective, high performing solutions in the AWS environment to meet challenging business needs.

Well-versed in Agile methodologies and possess strong leadership skills to effectively manage teams and collaborate with cross-functional stakeholders.

CERTIFICATIONS

❖ AWS Solutions Architect - Associate

Architect – Professional

Credential ID: 1HPNM1JJE1VQQQ55
4QMP33JLGEF1Q1CC

❖ AWS Solutions

Credential ID:

SKILLS & TECHNOLOGIES

AWS/Azure	Jenkins/GitLab CI, Code Deploy	Systems Migration
GitHub/Azure Repos/Bitbucket	Bash/Python/PowerShell/SVN	Disaster Recovery
Splunk/Grafana/Elasticsearch	CI/CD	Nginx/Tomcat/Apache
Python/PowerShell/Java	YAML/JSON	MySQL/Postgres/MongoDB
Nagios/Sonar Cloud/Veracode	SDLC	Ansible/Chef/Puppet
Docker/Kubernetes	EKS/ECS/AKS/ACI	Terraform/CloudFormation

WORK EXPERIENCE

Zilla Clinicals – Atlanta, GA (REMOTE)

Senior Solutions Architect

05/2019 – Present

- Developed enterprise architectural models, along with descriptive documentation for all stakeholders.
- Designed and tweaked global AWS **infrastructure**, including nodes in several regions and sub-regions.
- Migrated applications, accounts, and platforms when necessary and feasible.
- Designed AWS **Architecture**, Operations Lead for applications deployed in AWS (CI/CD).
- Well versed in DNS, Load Balancing, SSL, TCP/IP, networking and **security** Hands on experience in AWS provisioning and good knowledge of AWS **services** like EC2, S3, Glacier, ELB, RDS, Redshift, IAM, Route 53, VPC, Auto scaling, **Cloud** Front, **Cloud** Watch, **Cloud** Trail, **Cloud** Formation, **Security** Groups.
- Created tagging standards for proper identification and ownership of EC2 instances and other AWS resources.
- Created Highly Available Environments using Auto-Scaling, Load Balancers, and SQS.
- Implemented Versioning and lifecycle policies in S3 to backup and archive files in Glacier
- Integrated **Amazon Cloud** Watch with **Amazon** EC2 instances for **monitoring** the log files and track metrics.
- Created CloudFormation Templates (CFT) in both JSON & YAML formats to deploy the AWS **services** with the paradigm of **Infrastructure** as a Code.
- Provisioned Applications on AWS while taking advantage of Disaster recovery.
- Configured AWS **Identity Access Management** (IAM) Group and users for improved login authentication.
- Implemented a Continuous Delivery pipeline with **Docker**, Jenkins and GitHub and AWS AMI's
- Have experience of working with **Docker- docker** hub, pulling images from **docker** hub, running containers based on an image, creating **Docker** file to manage customized containers, exposing a container with port redirect, container volume **management**, **docker** inspect, **docker** commit to capture the file changes/settings into a new image and pushing the image to **docker** hub.
- Worked with AWS **services** using S3, RDS, EBS, Elastic Load Balancer, and Auto-scaling groups, EC2 instances with optimized volumes and achieved **cloud automation** and deployments using Chef, **python**, and AWS **Cloud** Formation Templates
- Created AWS S3 buckets, perform folder **management** in each bucket, manage **cloud** trail logs and objects within each bucket.
- Imported and created snowflake schemas to create high performance reports and dashboards
- Leveraged MongoDB and RDS to Database **management**.
- Automated AWS components like EC2 instances, **Security** groups, ELB, RDS, IAM through AWS **Cloud information** templates.
- Used Ruby Rspec framework and wrote test cases for regression and to resolve refactoring problems.

SessionM – Boston, MA

Cloud Engineer

06/2016 – 04/2019

- Built and maintained high availability environments in AWS
- Created CloudWatch logs, streams and rules

- Configured private and public FQDN for Dev, QA, Prod EC2, instances and Load balancers by creating respective records in internal DNS server and using Route53 for public internet hostname.
- Performed troubleshooting for EC2 instance and ELB issues.
- Automated **Vulnerability management** and conducted AWS IAM **Management**
- Implemented **Python** & Shell scripts for **automation**.
- Configured and maintained CI/CD using Jenkins & AWS Code Pipeline.
- Utilized Agile's Scrum methodologies to manage project deliverables.
- Expertise in creating **Kubernetes** cluster with **cloud** formation templates and deploy them in AWS environment and **monitoring** the health of pods using Helm Charts.
- Expertise in setting up **Kubernetes** (k8s) clusters for running microservices and pushed microservices into production with **Kubernetes** backed **Infrastructure**.
- Created and deployed VMs on the Microsoft **cloud** service Azure, created and managed the virtual networks to connect all the servers and designed ARM templates for Azure platform.
- Worked on Azure Fabric, Microservices, IoT & **Docker** containers in and involved in setting up **Terraform** continuous build integration system. Used Azure Internal Load Balancer to provide high availability for IaaS VMs & PaaS role instances.
- Added or removed EBS volumes to/from EC2 instances based on requests.
- Increased volume storage capacity on EBS blocks and regulated storage.
- Implemented domain name service (DNS) through route 53 to have highly available and scalable applications.
- Spearheaded the designing, deploying, and operation of highly available, secured, scalable and fault tolerant systems
- leveraging **Amazon Web Services** (AWS).
- Experience in Designing, Architecting and implementing scalable **cloud**-based **web** applications using AWS and GCP.
- Set up a GCP Firewall rules in order to allow or deny traffic to and from the VM's instances based on specified configuration and used GCP **cloud** CDN (content delivery **network**) to deliver content from GCP cache locations drastically improving user experience and latency.
- Configured and managed **Web** Applications and **Web** Servers (Apache)

Best Buy Inc. – Baltimore, MD

Junior Cloud Architect

03/2015 –06/2016

- Created and updated **network** ACLs, through AWS command line interface
- Leveraged ELB, Auto-Scaling and IEM to ensure application is scalable for big traffic days. i.e., Black Friday.
- Managed recovery and failover plan for all environments.
- Setup WAF in front of **web** applications for **security** and vulnerabilities.
- Leveraged CloudFront to reduce latency in content delivery for online customers
- Migrated application and databases to AWS using 6Rs strategy for migrating to AWS.
- Checked health and performance of containers running inside nodes of EKS cluster using Elasticsearch cluster.
- Created and configured elastic load balancers and auto scaling groups to distribute the traffic and to have a cost efficient, fault tolerant and highly available environment.

- Worked on Autoscaling, CloudWatch(**monitoring**), AWS Elastic Beanstalk (app deployments), **Amazon** S3(storage) and **Amazon** EBS (persistent disk storage).
- Created S3 buckets in the AWS environment to store files required to serve static content for a **web** application.
- Used AWS Beanstalk for deploying and scaling **web** applications and **services** developed with Java.
- Experienced in Automating, Configuring and deploying instances on AWS, Azure environments and Data centers, also familiar with EC2, **Cloud** watch, **Cloud** Formation, and managing **security** groups on AWS.
- Implemented a Continuous Delivery pipeline with **Docker**, Jenkins and GitHub and AWS AMI's
- Implemented domain name service (DNS) through route 53 to have highly available and scalable applications.
- Maintained the **monitoring** and alerting of production and corporate servers using **Cloud** Watch service.
- Created RDS instances to serve data through servers for responding to requests.
- Created snapshots to take backups of the volumes and images to store launch configurations of EC2 instances.

EDUCATION:

Morgan State University - **BSc in Marketing (Finance Minor)**
August 2011-May 2014

Dami Asanike

- Atlanta, GA, US
