PROJECT EXPERIENCE

Gerent LLC, VA | Program Manager

February 2022 – Present

- Gerent is an Information Technology (IT) and business consulting firm.
- Spearheaded agile software development implementation, boosting software **delivery** by 80%, and managed a \$1 million IT software/SaaS project.
- Led teams through the systems development life cycle. Owned Portfolio Management, reporting project progress to senior management.
- Managed multiple implementations of Manufacturing Cloud, Energy & Utility Cloud and Automotive Cloud programs
- Reduced time to implement new projects by 45%. • Developed a team of IT project managers, business analysts, project managers, and project administrators across multiple units to manage project plans and gather business requirements.

Deloitte Consulting Atlanta, GA | Project Manager

February 2021 – December 2022

- Led the IBM **Salesforce** Implementation of a partner portal for 4K+ users in 20+ countries across 3 businesses.
- Managed an 8-week engagement to consolidated and rationalized Mary Kay application portfolio to reduce redundancies and promote standardization anchoring on **Salesforce**.
- Led ACG Digital Transformational project to reduce multiple digital interaction platforms, limited **integration** and connectivity between the platforms, inconsistent processes, and ineffective use of tools.
- Led **Salesforce** work streams from solution architecting and design through development and deployment.
- Lead the development team to implement the technical solution and provide technical governance to the development team to ensure following **best practices**.
- Met with client executives and drive proposals.

NCR Corporation Atlanta, GA | Project Manager

April 2019 – Dec 2020

Managed NCR Earliest Time to Bill program which consist of small to large projects that drives an incremental quarterly services billing of \$50M vs the year prior. Projects consist of ETB Dashboard for Services Annuity Billing (HW/SW Maintenance), Services Billing Management **System, Software Leakage **System** and of Account Point of Contact**

- Using the PMI project management principles, leads the Agile team in efforts to manage, coordinate and oversee a vendor team that provides on-going **system** Operations and Maintenance (O&M) services for the new program
- As the Project Manager, I led initiatives across multiple functions and teams by planning, directing, and coordinating project objectives with consideration for risk.
- I played a leading role in managing the NCR formal application change management process; ensures that requests for application changes are vetted and prioritized; managed throughout the entire software development life cycle.
- I worked with State and Vendor project teams to ensure that reported **system** defects are properly documented, triaged, prioritized and resolved.
- I worked with the team to manage code changes throughout the software development life cycle.
- I managed team resources, ensures an accurate project schedule, detailing all approved work and properly updated and maintained project documentation
- Developed and delivered monthly management reports showing progress of work against the approved schedule; Provided state project team with guidance and instruction to collect needed **data** and metrics for these reports; Presented progress report findings to executive management
- Played a leading role in developing plans and process for **system** O&M knowledge transfer from vendor team to State team member.
- Works with management and other Project Leaders to continually identify and implement organization-wide process improvements

Coca-Cola Company Atlanta, GA | Project Manager

June 2017 – March 2019

CokeWork is an ecosystem of smart digital tools that enables leaner, faster, and easier ways of working together on innovation projects and integrated marketing campaigns such as 2018 FiFA world cup campaign.

- Manage the implementation of Coca-Cola CokeWorks application used globally by over 4000 users across 18 business units
- Promote Agile **best practices** of **continuous integration**, code/design reviews, transparency and accountability through JIRA tracking
- Skilled in user stories and acceptance criteria creation
- Facilitate the daily standup meeting as per Agile methodology to assess the progress of backlogs.
- Coordinate with Product Owner to prioritize product backlog as per project schedules & business demand.
- Manage relationships with **system integration** vendors and managed challenges to deliver projects of high complexity and significant size while maintaining IT policies and procedures.
- Organize demos to client whenever requested.
- Build and maintain client interpersonal relationships while spearheading the global change management and training
- Provide technical recommendations for continued **integration** of the **Salesforce** cloud platform development with other application such as SAP, CPQ, GRIDBUDDY, EINSTIEN, BOX, ORACLE, MICROSOFT AZURE
- Provide extensive support on dashboards and reports for better visibility into campaign results that measure campaign effectiveness and metrics.
- Coordinate with other teams for timely **delivery** of tasks & resolution of defects to make sure testing is achievable within planed schedule.
- Organize & facilitate overall release. Participate in reviews & retrospectives.
- Communicated status, priorities and expectations with key organization stakeholders

Global Harmonization Project

The WIKA Dynamics AX 2012 ERP and CRM implementation was focused on seamless harmonization of WIKA Global (Europe/Asia/South and North America/Africa) processes and operations, with heavy customization and integration of multiple modules within Dynamics AX 2012 and other applications for a projected benefits of total order lead time reduction from several weeks to as little as five days and increased inventory turnover by a factor of 12.

- Involved in all phases of Dynamics AX implementations.
- Acted as Subject Matter Expert in setup and configuration of the Dynamics AX Financials (AR, Sales & Marketing, AP, Procurement and Sourcing, GL, Cash and Bank Management) and (Purchase request, RFQ, Workflow, Purchase Order processing)
- Actively participated in facilitated discussions with the client and project teams in order to understand and communicate client's needs, project team's goals, and individual role.
- Assisted with the development of functional and technical specifications, unit and system test scripts, user training and deployment plans.
- Worked with other implementation team members to ensure the overall accuracy and consistency of accounting transactions throughout the system.
- Wrote training documentation, trained the end-users, and provided Go-Live/Post Go-Live Support.

Husky Energy Inc Canada | Business Analyst June 2013 – August 2015

Program: Money Ball.

This is a multi-year with \$8.75M total investment with a payback of 3.4 years to establish sustainable and scalable processes that ensure 10% in revenue enhancement, and 10% in cost avoidance within the Husky Heavy Oil Group with yearly services budget of + \$190 Million. This program helps to automate proven business processes that expand to Equipment Maintenance, Fluid Management / Logistics, Well Servicing, Engineering and Operations.

The project improves processes, controls, and data collection/tracking of an asset throughout its lifecycle. The cloud base solution provides the operators in the field the ability request notification for service and work Orders in SAP via Salesforce

- Lead the design, development, testing, deploying, and support of integrations between Salesforce and other systems (SAP, PVR, CORTEX and Active Directory).
- Designed, documented, tested, and deploy high quality business solutions on the Force.com platform
- Developed business process flows, use cases and user stories. Build prototypes and lead customer discussions
- Developed content, reports, dashboards, Chatter, custom objects, workflows, triggers and validation rules.
- Implemented security models such as user accounts, sharing rules, user roles, user profiles, field level security, content folder rights, groups and list view rights.

Fluid Management System

The project streamlined and optimized data entry and capture of well information as well as provide a dynamic load

planning that incorporates different exceptions from well operators, facility operator, truckers, and dispatcher with near real-time load schedule and a capability for predictive forecast of load demands.

- Primarily involved in developing prototype of the application as proof of concept (POC) for business team and as a guideline for development team.
- Facilitated and led group discussions to elicit requirements in Joint Application Development (JAD) sessions by communicating with documented business requirement document, working prototype and work flow diagrams.
- Deployed, configured and supported the prototype application for its demo /UAT for various vendor companies, prepared deck for UAT & gathered feedback and followed up with further updates on the prototype and related documents.
- Developed use cases document for the application, traceability matrix , **system** requirement specification (SRS) and presentations for proposed solutions
- Created various Custom objects, Tabs, Workflows, Reports, **Apex** triggers and validation rules for the application and Customized Page Layouts for **Salesforce.com** Standard and Custom objects.
- Created Email templates in Text, HTML and VisualForce necessary for the application.
- Analyzed and Created Custom Profiles as required for the business needs and implemented Object level, Field level and Record level **security**.
- Defined various Validation rules to validate the **data** in the application.
- Created custom report types and generated report using the report types.
- Used **Data** loader for all **data** adding, updating, and deleting, exporting **data**.
- Used Eclipse IDE for building scripts and deployment
- Documented Sales force fundamentals and reporting for easy understanding and navigation for business users

Vendor's Time Tracking **System**.

This project reduces the administrative effort to enter tradesmen's hours in multiple systems and provide a mechanism and process whereby tradesmen enter hours and availability in one **system** that allows work time audit, in preparation for invoicing and provide reporting functionality for hours worked by each tradesman and complete work history on each work order. The project annual saving is \$2.9 million.

- Mapped out existing business processes and providing **system**-based solutions that increase efficiency and reduce operating costs.
- Scoped Phase, Gap Analysis, Testing, and Implementation Phase.
- Created page layouts, search layouts to organize fields, custom links, related lists, and other components on a record detail and edit pages.
- Implemented pick lists, dependent pick lists, lookups, junction objects, master detail relationships, validation and formula fields to the custom objects.
- Customized standard objects like Accounts, Contacts, Opportunities, Cases, as per client's need.
- Migrated **data** from ACT, Excel, MS outlook and Legacy Systems using **Data** Loader, Import Wizard.
- Generated and analyzed custom reports and dashboard for management and various business unit personnel to provide detail information on key performance indicators.
- Developed process enhancements through automations including **Workflow**, Approval Processes, and Escalation Rules.
- Involved in testing and administration spanning all facets of package software and SaaS application implementation.
- Strong knowledge & experience working in teams implementing Agile Methodologies.
- Knowledge in **Salesforce.com** SFA, Force.com **Apex** Classes, **Apex** triggers, **Integration**, Visual force, Force.com **API**, SOQL, and SOSL.

Project: Pipelink **Customer Experience Portal (PCEP)**

This customized **customer** facing portal was an Oracle fusion enterprise application that automates and integrates numerous Enbridge business processes and support real-time interaction between Enbridge and its customers, improving pipeline efficiency by 25% and increasing **customer** satisfaction.

- Conduct business planning sessions and leading the development of business cases with clients to develop business strategies and plans
- Conducts need assessment or process facilitation with client to identify organization, information, and **integration** requirements
- Promote interoperability of business and technology, acting as the bridge between the business objectives and the technology requirements
- Lead client groups to conceptualize processes to apply information technology as a strategic asset, as it applies to business
- Determines business requirements through research, facilitation and/or analysis
- Documents requirements using deferent techniques such as Use Cases and/or Swim Lane diagrams with SPARX Enterprise Architecture Ver. 9.0 Tool
- Facilitates the development/creation of current and future state business processes, organizational, and high- level technology architecture models related to the problem domain
- Develops detailed business and technical specification
- Contribute to the creation of test plan; developing test cases and scripts for functional testing using Rational Quality Management Tool.
- Complete status reports and other duties as assigned.

Project 1: SharePoint Portal Implementation

The project provides the functionality, methods, and tools to be used for organizing and storing electronic documents throughout the lifecycle of contents that relates to their processes.

- Gathered, documented and analyzed business and functional requirements from multiple stakeholders for SharePoint 2010 Implementation
- Facilitated meeting with DIALOG departments to standardize and optimize the way **data**/information is created, managed, stored and removed from systems
- Designed SharePoint solutions to address business needs and opportunities and propose changes that would make the SharePoint environment a more effective solution.
- Created SharePoint workflows using SharePoint Designer 2010 and other project documentation such as specification document, process flow to document requirements
- Designed User Interfaces incorporating; Page Lay Outs, Master Pages, Web Part Zones and SharePoint Web Parts; Designing and developing SharePoint themes + templates
- Reviewed Information Architecture assessment to assure information flow **integrity**, portal structures and taxonomy
- Provided guidance and advice on permissions for Owners, Members and Visitors of SharePoint sites, established usage policy and procedures, user roles and responsibility, and user groups.
- Documented SharePoint policies, procedures and governance policies. Manage content review, approval, and publishing.
- Developed test cases in Rational Quality Manager –RQM and executed them as required within the

Sandbox; Documented test results and ensured compliance with project standard

- Developed SharePoint training documents; Trained new SharePoint team members ; Provided user support for company SharePoint site such as Unlocking and reset user accounts and passwords via Active Directory
- Provided recommendations on other on-going Enterprise Content Management project such as “Live link” project

Project 2: Medical Supply Claims System – Ostomy

I was a senior analyst on the Ostomy medical Supplies project that was part of the Drug Plan IT Efficiencies project; this client facing solution span multiple applications and technologies, with stakeholder across the province. The solution enables Saskatchewan health service providers' access to check a patient's eligibility for services and also submits claims in real-time which reduces manual efforts and increased health service providers' revenue by 28% and invoicing accuracy by 47%

- Team lead for the Q/A team that was responsible for Quality assurance and implementation
- Worked with senior Drug Plan managers to identify priorities and coordinate application planning
- Lead the acceptance test function for the various Drug Plan and Extended Benefit systems affected by the PHRS system redevelopment by documenting business processes and impact, test plan development, co-ordinate use case development and acceptance test implementation, prioritize test activities and time manage test activities.
- Create Test Strategies, Test Plans, Training guides and User Manuals
- Implemented Change Request and prepared regular projects status update reports for project manager and other stakeholders

Project 3: Chiropractic Claims Adjudication System

This is an upgrade of the Drug Plan claims application which was successfully implemented February 23, 2011. This multi-years project involve many other areas within and outside Sask. Health; increasing health service provider's bottom-line by over 45% with introduction of real-time claim processing.

- Developed and documented business requirements in support of the strategic and operational project by the aid of MS Visio and Rational Rose modeling tools;
- Created and documented models, business process flow models, business services, data and information requirements by using (UML);
- Developed estimates with other stakeholder for the proposed project;
- Planned and communicated regularly with the stakeholders by means of status reports, presentations, e-mails, and meetings;
- Coordinated the design and review sessions of the key project deliverables using the Rational Unified Process (RUP) to ensure that technology solutions meet the identified business needs;
- Remained current on technical and professional information regarding areas of responsibility;
- Performed JAD sessions with business users to document the as is business state, and the to be business target state, and gap analysis, adopted waterfall methodology for the SDLC.

Comcast Communication, Atlanta GA | Business Analyst July 2007 – October 2011

Project1: e-Bill Payment System Application Enhancement

The project was to enhance the functionalities of the web based system through which customer view and pay bills online.

- Developed and documented business requirements in support of the strategic and operational project by the aid of MS Visio and Rational Rose modeling tools;
- Created and documented models, business process flow models, business services, data and information requirements by using (UML);

- Developed estimates with other stakeholder for the proposed project;
- Coordinated the design and review sessions of the key project deliverables using the Rational Unified Process (RUP) to ensure that technology solutions meet the identified business needs;
- Remained current on technical and professional information regarding areas of responsibility.

Project2: SharePoint 2007 Implementation

Comcast implemented SharePoint 2007 to provide a cost-effective way to organize, share and collaborate more effectively.

- Met with decision makers, systems owners, and end users to define business and operations requirements and systems goals; Recommended solutions that align with corporate goals
- Led the gathering and documentation of high-level and detailed business and functional requirements from a broad community of stakeholders; Documented and diagram requirements
- Reviewed and analyze the effectiveness and efficiency of existing SharePoint systems and develop strategies for improving or further leveraging these applications. Solidify processes for content authoring and publishing
- Acted as an advisor to project team members on business/**system** processes; provided guidance and advisement to client to ensure their needs are met
- Participated in the planning and execution of **system** test and user acceptance test activities

Department of Education, Atlanta GA | Business Analyst

October 2006 – November 2007

Project: Student Information Management **System Upgrade**

*Project involves eradication of paper-based **system**. The new **system** is a web base service that performed functions of allowing student and authority to login to a webpage to view student information.*

- Documented business, functional and non-functional requirements, business process flow models, screen mockups, Prototyping, Brainstorming, Interface and Document Analysis to gather requirements for development of the **system**.
- Drafted UML diagrams like Business Use Cases, Activity diagrams using Rational Rose **modeling** aid.
- Create Vision and Scope Documents, Need Document, Business Requirement Documents, Test Strategies, and Test Plans and Training guides and Manuals.
- Participated in regression testing to ensure initial functionality of the **system** had not been affected, with the aid of Win runner, Rational Functional Tester.
- Evaluated the Department's information management processes, identified Gaps and made recommendation on **improvement** strategies.
- Conducted interviews, focus groups and job shadowing with internal staff and stakeholders to better understand their challenges and captured their business processes.
- Conducted **data** classification, **data** profiling, and **data** quality assurance of **data**.
- Brainstormed with SMEs on **best** approaches for **data** and information **system security**.
- Ensured **delivery** of business requirements document is in the sufficient level of detail that accurately defines the business need within specified solution scope through the Enterprise Zachmans framework Architecture;
- Validated that the identified solution meets the strategic needs and business case benefits.

Shell Petroleum | Business Analyst - Information **System**

October 2005 – September 2006

Project: Accident / Incident Information **System**

The Project involves redesign of Shell accident reporting systems to track accidents and their cost, determine the cause and identify solutions

- Gathered and documented functional and non-functional requirements using Use Case Development and
- Held meetings and JAD Sessions with users, stakeholders and sponsors to gather business requirements as well as to analyze document and review functional Use Cases
- Identified business objectives working with stakeholders to define business process changes
- Developed business cases to help prioritize business goals, time frame and procedures for accomplishing projects
- Created Business Requirement Documents (BRD) to ensure the business and technical scope of projects are well defined and understood by both IT and the business division, UML notations and Design documentation
- Followed Project Life Cycle (PLC) Guidelines and completed all assigned project artifacts per standards
- Implemented Change Request and prepared regular projects status update reports for project manager and other stakeholders; Carried out Quality Assurance and User Acceptance Testing

Nigeria Liquefied Natural Gas | Business Analyst January 2004 – October 2005

Project: Electronic Information Management (EMI)

The project provides the functionality, methods, and tools to be used for organizing and storing NLNG's documents, and other contents throughout the lifecycle of contents that relates to their processes.

- Performed Gap analysis, prepared project plan and solution documents and coordinated with multiple IT teams (Development, QA, Vendors) both internal and external, to ensure **delivery** of product within tight deadlines.
- Generated a streamline process to understand the various issues and desired functionality of the new **system** by interacting with users, management, SME (Subject Matter Expert) and stakeholders.
- Created questionnaires for SMEs to gather requirements; Facilitated review meetings to ensure that the project was implemented within the specifications of the contract.
- Championed Requirement Scoping and identifying high priority requirement for implementation.
- Assisted the QA team in reviewing test cases, test plans and tested the final application for usability testing to verify whether all the user requirements were catered to by the application.
- Facilitated User Acceptance testing (UAT) for the application as a Business User, Trained end users and client IT group on functionalities.

Nigeria Liquefied Natural Gas | Test Analyst

July 2002 – December 2003

Project: SAP **System Integration** testing

- Worked closely with the Senior Test Manager on the Analyzer Upgrade project for **integration** of SAP and non- SAP solutions and business scenarios.
- Developed test strategies and Test Plan for technical, functional, **integration**, regression, and User Acceptance testing; assessed testing requirements and provide estimates of testing effort and resources
- Prepared detailed test plans including risk assessment of areas not being tested, analyzed business requirements to ensure testability through industrial **best** testing **practices** in Rational Test Manager
- Identified any cross systems impacts of the project; Developed test scenarios/cases and scripts to ensure quality of applications
- Executed Functional, **System** and **System Integration** testing in SAP and other interfacing applications
- Identified and managed risk areas and determined solution readiness to transition to Production environments; Manage clients' expectations and deliverables

Daewoo Engineering and Construction | Project Engineer

May 1996 – June 2002

Project: Pipe Fabrication Project for NLNG.

Project manager with Daewoo Construction and Engineering, the owner of all the spool fabrication during the construction of \$6 billion LNG plants/facilities that contains six liquefaction units, producing 22 million metric tonnes of LNG per year

- Execute projects in accordance with contracts and Blueprints in respect of: Safety, Cost, Productivity, Schedule; Provide input/review/consultation to estimating for input to bids related to site conditions and execution plan.
- Oversaw projects and initiated contracts of up to \$45 million for LNG Pipeline construction.
- Coordinated cash audits, value of work done, and expenditure forecasts. Saved \$2 million in 2 years from construction contract review.
- Coordinated planning, pre-qualification, and tendering phases of execution contract. Ensured adherence to company, group, and international standards and specifications.
- Prepared punch lists. Supervised fabrication & installation of Spools, line construction, increased production through process **improvement** by 25 per-cent.
- Project cost management; preparation of estimates and project proposal sheets. Overall contract management from planning to handover and closeout. Develop monthly/yearly resource and revenue forecasting, budgets and cost reporting.
- Ensure performance reviews are conducted on a regular basis and career development plans are in place for divisional staff.
