Qualifications

Educated and trained in **computer software** disciplines, I have a comprehensive skill set and experience to work on complex **software** projects. With passion and knowledge of building and maintaining automated CI/CD framework, and with extensive experience in **software development**, testing and agile practicing, I am well qualified to help a company to manage a team of **technical** engineers and to build **software** better and faster.

- Seasonal **software** dev manager with people **management skills** and extensive hiring experiences
- Expert in creating and maintaining the **cloud** based CI/CD system **software development**
- Developed tools to allow improve developer experience on laptop as wells tools to facilitate the pipeline environments
- Experience with CI system like TeamCity, Jenkins, and Bamboo
- Efficient in **management** and **planning** for the AWS based **cloud infrastructure**
- Hands-on coding **skills** in languages like Groovy, Gradle, Java, Ruby, Bash, Ant, etc
- SCJD certified Java programmer Certified SCRUM master
- Deep knowledge of all aspects of agile **software development** life cycles
- Specialized in building automated CI/CD processes
- Developed complex **analysis** to pinpoint hard-to-find **software** defects
- Extensive experience in managing the **cloud Infrastructure** As a Code
- Led and managed team of **technical** people
- Wrote and published **technical** documents
- Extensive usage of **programming** IDEs like IntelliJ and Eclipse
- Familiar with various version control **systems** like GIT, Subversion, Perforce and ClearCase
- Experience with automation and **performance analysis** for **client/server** applications
- Expert level of Selenium test framework

Professional Experiences

Senior Software Development Manager

Workday Inc

Pleasanton, CA

01/2016 - present

Workday is built with a true **cloud architecture** that allows us to scale and deliver **innovation** to everybody at once. **It** is the leader in the fields of **cloud-based management** solutions for Human Capital, Financial, Payroll, Student, **Planning** and other ERP etc.

- Acted as the change agent for transforming the old Workday core service pipeline on the Ant system onto the modern object **oriented** Gradle/Java based build framework, and converted the on-premise build environment onto the **Infrastructure** As Code into virtualized AWS **cloud infrastructure** via terraform and packer scripts.
- After I rewrote the whole build system for Workday core team single handed using 1000+ jiras and about 200k lines of code
- Built a CI/CD delivery team for managing the Workday core services including the Java packages and metadata databases, as well as for hundreds of jars and binary artifacts for many services.
- Worked with PM/PO and **leadership** team to enforce the agile/scrum process for prioritization and ensuring projects to go completion for each iteration.
- Created the effective automated CI system that runs over 1 million tests many times a day continuously for all the developer feature changes
- Served as the transformational tech leader to moving the company's legacy build framework on Ant into the modern object **oriented** Gradle framework
- Strategically migrated the whole CI/CD system into the new system while keeping the existing pipeline running in parallel
- Performed the CI/CD operations for the **development** teams of 4000+, shipping the core services **software** into the **cloud** twice a week.
- Served as the scrum master for the core service build team and automated the scrum and Kanban jira **management**
- Lead the effort of migrating the automation **infrastructure** from physical **data center** into the **cloud** based **infrastructure**
- Established a robust system for hotpatch on-call via pagerDuty and build automation
- Recreated the manual maintained **infrastructure** into the AWS backed **Infrastructure** As Code (IAC)
- Implemented parallel pipelines to facilitate complex features testing and delivery into the **cloud data center**
- Lead the dev teams to upgrade all the major version of Java platform for the core service teams
- Coded the jira automation framework to have all the pipeline failures routed to various dev teams over hundreds of dev teams
- Wrote the slack **integration** to automatically notify dev teams about the build failures and build health
- Automated the process of delivery build pipeline health so the dev teams can focus the effort to do effective triaging for the blocking failures
- Worked with all the **management** and the product teams to prioritize the resource and projects for the Workday company goals
- Lead the **project** of **migration** of the Workday core **software** build system using Docker, Kubernetes on Google **cloud** (GKE) and Jenkins CI pipeline, the developer local environments are managed with Docker Compose

Senior Software Engineer

Workday Inc

Pleasanton, CA 10/2012 - 01/2016

- Single handed rewrote the CI framework from the Ancient Ant build system with Gradle

based automation framework via about a quarter million lines of code in Groovy, Java and Bash.

- Implemented the Semantic versioning system for the Workday core internal deliverables include jar, RPM and Docker images
- Refactored the Java dependency from file based system onto artifactory backed Ivy and Maven system
- Automated the core service developer on-boarding process on Mac via the combination of Bash, Brew and Python

Senior Software Engineer

Guidewire Software

San Mateo, CA 11/2007 - 10/2012

Guidewire Software Inc. is the leading and fast growing web app software provider to serve the property and casualty insurance industry. It fully embraces the agile practices in all its development activities. Following is a list of my roles and accomplishments:

Platform Software Engineer

- Served as the triage engineer to do feature implementation and defects resolutions that have high customer values
- Worked in the roles of test master and release master to coordinate internal platform building and releasing
- Worked with PM and other engineers to prioritize and handle the customer escalations that were raised to platform team

Automation Framework Developer

- Worked as a Java developer to implement features and to fix bugs for our internal test automation management and execution in our internal continuous integration system (CI).
- The server side of the CI system is a complete web application that is built on top of Guidewire's platform just like other Guidewire commercial products. Created the features such as suite scheduling, test base reorganization, plugin management, etc.
- The test client agent of the CI system does all the distributed test execution/reporting and customer build deployment.
- Did extensive bug fixes and feature implementations in the areas of application server (Tomcat, Web Logic, Web Sphere and JBoss) deployment, multiapp test configuration, JNDI configuration, Java and ANT script integration, and Swing UI feature implementation.
- Performed troubleshooting when the continuous integration system was not behaving in the areas of hardware, operating system, application server and databases
- Administered the Perforce source control system to make sure the smooth integration between development team and the continuous testing system
- Investigated and researched machine virtualization solutions among KVM, Citrix Xen, VMWare Workstation, Microsoft Hyper-V, and Oracle Virtual Box
- Managed the testing infrastructure such as PXE reimaging machines, OS upgrading, and machine health monitoring.
- Served as DevOp support engineer to resolve development infrastructure issues for developer, QA and other internal users

- Built the **integration** system between RN and **Guidewire** portal to facilitate the **communication** among different departments.

Platform **Integration** Scrum Master

- Lead the agile **development** process for the platform **integration** team to ensure the agile practices like daily standup, sprint **planning**, retrospectives and weekly agile book reading.
- Worked with developers, QA and PM to prioritize and deliver various features like file based archiving, document **management** to application teams.
- Worked with other developers to build the language class types and type loaders for Web Services (WSDL, SOAP)
- Built the **integration** system for Jira and AgileZen to facilitate the team to adopt the Kanban practices

Lead Test Automation Engineer **MDL Information System** **San Ramon, CA, 2000 - 10/2007**

MDL is an international company that provides database and specialized **software** to Pharmaceutical and chemistry industries such as Merck, J&J, Pfizer and DuPont, just to mention a few. The QA department has over 40 full time testers.

Following is a list of major achievements:

- **Test Automation Framework**
 - Architected, designed and led **development** of this framework utilizing SilkTest tools along with .Net and Java.
 - Test automation framework is a full blown system that covers the entire **software** testing life cycle including managing test cases, plans, implementation, execution and result **evaluation**. Through this framework, both the manual and automated testing are streamlined and tracked with audit trail of results
 - Responsible for reviewing and approve all MDL's QA test automation plan and test automation **design**, make **technical** recommendation and help each team make **design** change
 - Whole suite of automated tests to cover smoke testing and regression functional testing
- **Performance Evaluation**
 - Developed a workflow based on usage pattern to simulate near-actual user experience
 - Executed and analyzed web application **performance** in a WAN environment using SilkPerformer along with Shunra storm box
 - The user interactions are recorded and simulated between **client** and **server** using SilkPerformer
 - Simulate and measure user **performance** level by using SilkTest
 - Developed a 24x7 monitor for our commercial DiscoveryGate website using SilkPerformer script.

Credentials

- AWS Practitioner
- Certified Scrum master
- Certified SCJD Java Developer
- Strong verbal and written communication skills in English and Mandarin

Education

MS Computer Science

12/2001

Kent State University

PhD Chemistry

12/2000

University of Akron

BS Chemistry

Nankai University

Ziming Sun

- San Ramon, CA, US

Summary

As a **Senior Software Development** Manager at Workday, I lead a team of talented engineers who deliver scalable, reliable, and innovative web applications for the **enterprise cloud**. I have over 11 years of experience in **software** engineering, with a focus on Java **technologies**, Gradle, Groovy, and Ant. I enjoy agile **development** practices and collaborating with cross-functional teams to create solutions that meet customer needs and **business** goals. I am also passionate about learning new **skills** and **technologies**, such as AWS, Ruby, Bash, Gosu, Watir, Rspec, C#, and Perl. I hold multiple AWS certifications and have completed courses on preventing workplace harassment. My mission is to develop high-quality **software** that makes work easier and more enjoyable for everyone.

Work History

Total Work Experience: 25 years

- **Senior Software Engineer Workday**
Oct 01, 2012
- **Software Engineer Guidewire Software**
Oct 01, 2007
- **Test Automation Engineer MDL Information Systems**
Oct 01, 2000

Education

- **Doctorate** | University of Akron
- **Bachelors** | Nankai University
- **Masters** | Kent State University

Skills

- **leadership** - 31 years
- **software** - 31 years
- **agile** - 23 years
- **automation** - 21 years
- **framework** - 21 years
- **java** - 21 years
- **qa** - 19 years
- **database** - 18 years
- **apache ant** - 13 years
