Experience Summary:

- **Mainframe** analyst/developer/lead with several years experience in requirements analysis, preparing high & detail level designs, detailed technical specifications, coding, unit **testing**, system **testing**, analyzing test results, job scheduling, implementation, and production support.
- Platforms: **IBM Mainframe** with **COBOL**, **DB2/SQL**, **IMS**, **VSAM**, **CICS**, **JCL**, **MQ**, sequential files.
- Extensive background working across all phases of the System Development Life Cycle.
- Well versed in **testing** methodologies, processes involved in developing and executing test scripts, creating test data, and defect resolution.
- Ability to analyze existing systems in detail.
- Ability to conceptualize and document new designs that are efficient & effective. Designs are forward thinking in terms of understandability and ease of change for future enhancements.
- Experience in scheduling jobs and preparing batch job flows.
- Expertise in writing and **testing** queries in **DB2**.
- Expertise in coordinating system tests: test plan formulation, setting up test data, designing test cases, executing test scripts, validating results.
- Experienced with integrated systems that employ varying technologies across multiple platforms.
- Expertise in documentation using Microsoft Office Tools: Visio, Word, Excel, Access, MS Project, Power Point.
- Motivated to dig in and broaden system knowledge, strive to understand internal workings.
- Excellent interpersonal skills.
- Ability to work individually or as a team member.
- Ability to lead **design**, development, **testing**, implementation, and support over a full life cycle.
- Experience with team collaboration at a senior level to ensure **quality** and delivery: provide technical support, review deliverables, communicate with offshore teams, track deliverables, status reporting, and mentor other team members.
- Experience leading teams of 2-8 members, breaking down **design** & development effort into manageable units, and devising overall plan to execute development plan.
- Ability to communicate and interact effectively with clients and business partners.

Technical Skills:

Operating Systems: MVS, OS 390, TSO/ISPF, MS-Windows 5/98/NT/XP
Languages: **COBOL**, **SQL**, **EASYTRIEVE**, **JCL**, **CICS**
Development Tools: **SPUFI**, **FileAid** for **DB2**, **Batch FileAid**, **File Manager**, **Platinum**, **Endevor**, **SCLM**, **CA7**, **Expedit**, **Syncsort**, **Panvalet**, **Strobe**, **QMF**, **Test Director**
Database: **DB2**, **VSAM**, **Sequential Files**, **IMS**, **MS Access**
Hardware Platforms: **IBM**, **PC Compatibles**
Microsoft: **Word**, **Excel**, **Project**, **VISIO**, **Outlook**, **Access**, **Powerpoint**

Educational qualifications:

Bachelors in Computer Science, St. Cloud State University, St. Cloud MN, 1988
Associate of Arts, Normandale Community College, Bloomington MN, 1986
Certificates: **HTML**, **JavaScript**, **XML** – **W3Schools**, 2010

PROFESSIONAL EXPERIENCE:

Contractor, Minneapolis, MN

Duration: Jan 2010– Present

Role: Sr. Developer/System Analyst/Technical Lead

Description: Contract with large bank in Mpls to convert data as part of a large merger acquisition.

Roles/Responsibilities:

- Coordinate and lead execution of TIR & SWIFT entitlements conversions.
- Analyze system performance, efficiency, and **design**. Provide change recommendations, and carry out the development and **testing** for approved recommendations.
- Mentor new team members.
- Analysis, **design**, development, **testing**, and deployment of new batch reporting applications. Responsible for entire development life cycle, required documentation, & approvals.
- Required to work independently to carry out day-to-day activities effectively, and work in a team environment for production conversions.
- Provide production support: monitor system & applications, resolve abends, identify potential issues, validate performance, participate in on-call duties.

Environment: **IBM Mainframe**, **COBOL**, **DB2**, **JCL**, Easytrieve, CA7, **IBM** utilities, sequential files.

Express Scripts Inc, Bloomington MN

Duration: Nov 2000– Jul 2010

Role: Software Engineer/System Analyst/Technical Lead

Description: Support Prior Auth & Claims systems. Modify/rewrite applications to meet new business requirements, support technology upgrades, enhance reporting, improve system performance, and apply changes required to support government mandates and regulations.

Roles/Responsibilities:

- Participate in requirements discussions, estimating, and up-front analysis of existing applications.
- Accountable for overall **design**, development, and implementation.
- Lead **design** and development teams thru analysis and coding phases (includes offshore personnel).
- Coordinate with interfacing systems, develop solutions across platforms and technologies.
- Perform in depth analysis to create detail level designs based on business requirement specifications.
- Coordinate and participate in the creation of technical specifications from detail **design**.
- Build and modify applications from technical specifications, then unit test those applications.
- Perform and coordinate **design** reviews, code reviews, and unit test reviews with team members.
- Coordinate and lead system test: Accountable for test plan, data, scripts, err resolution, execution.
- Participate in SQA test process: create test cases, validate test cases, log and track of defects.
- Develop implementation strategy and lead deployment execution.
- Provide production support: monitor system applications, resolve abends, identify potential issues, evaluate performance, participate in on-call duties.

Environment: **IBM Mainframe**, **COBOL**, **SQL/DB2**, **JCL**, **VSAM**, **CICS**, MQ Series, Sequential files.

Independent Contractor, Minneapolis, MN

Duration: Jun 1994– Oct 2000

Role: Sr. Developer/System Analyst/Technical Lead

Description: Contracts with multiple large corporations, served as lead analyst & senior developer.

Roles/Responsibilities:

- Participate in requirements discussions, estimating, and up-front analysis of existing applications.
- Perform in depth analysis to create high level and detail level designs based on business requirement specifications.
- Write detailed technical specifications.
- Create code from technical specifications, then unit test those applications. Review code and test results with other team members to ensure **quality** and accuracy.
- Participate in system test activities: author test cases, build test data, document test plan, execute test scripts and validate results.
- Develop implementation strategy. Participate in deployment activities.
- Provide production support: monitor system & applications, resolve abends, identify potential issues, validate performance, participate in on-call duties.

Environment: **IBM Mainframe**, **COBOL**, **JCL**, **VSAM**, CA7, **DB2**, IMS, Panvalet, sequential files.
