Senior DevOps/Site Reliability Engineer (SRE) experienced in Large Scale, High Performance Cloud Software and Infrastructure Engineering, Agile, ITIL, SDLC, Project Management, Change Control, Configuration Management, Policy Development & Enforcement, blackbox/whitebox Test & QA Review, Application Troubleshooting, Daily Administration, Capacity Planning, Systems Development, Engineer Support, Vendor Interaction, Platform Design and Security

Employment History:

10/19 – 02/24 ParamountPlus, San Francisco, CA

Sr. DevOps Engineer, Observability, Site Reliability Team

Responsible for Observability Platform Infrastructure, Development, Maintenance as the Sr DevOps Engineer on the Observability Team, of the Site Reliability Team for ParamountPlus (formerly CBS Interactive), currently with 63 million subscribers, supporting dozens of client platforms, languages (PHP, Java, Nodejs, Go, et alii) across a diverse tech stack inside GKE (Google Kubernetes stack) with internal Prometheus/Thanos infrastructure, Grafana, Apache Kafka, Fluentd and Logstash, Apache Druid, Elasticsearch, Kibana, Grafana, ThousandEyes and New Relic, and Datadog's Vector for data pipelines

- Brought a recent major PHP8 upgrade project from another team back on track for release before Super Bowl code freeze, a major dependency needed by many teams across the enterprise
- Responsible for architecting/maintaining observability solutions in Helm, Argo CI/CD, Terraform
- Front line, Tier 2, 24/7 oncall escalation for the entire ParamountPlus technology stack
- Design and implemented tools in multiple languages for managing different parts of the observability stack
- Mentoring of junior engineers

07/18 – 9/19 Roche Sequencing Solutions, Pleasanton, CA

DevOps Engineer, HPC Systems Group

Responsible for DevOps Engineering for a 150+ node (w/ K80 GPUs) HPC system (Univa Grid Engine, primarily Nextflow & Docker) fronting 6 Petabytes of GPFS storage for pharmaceutical R&D, specifically for machine learning and genome sequencing

- Managed and deployed services on multiple Kubernetes clusters (Ansible Tower, inhouse microservices)
- Managed and delivered a Shared Application Tree, providing libraries and tools (vis Spack and LMOD) for fully dynamic loadable software configurations for running HPC cluster jobs for genome sequencing and machine learning
- Built out application stack for GPU enabled Tensorflow platform
- Designed, coded and deployed agent-based filesystem crawler for managing filesets and disk utilization on a 6 Petabyte GPFS cluster
- Managed Github Enterprise and multiple Jenkins installations for CI/CD
- Architected/Delivered/Supported HA setups for GHE and Jenkins, for DR purposes

11/16 – 01/18 BloomIP. Inc, Union City, CA

Senior Systems Engineer

Responsible for Automation and Engineering for a managed services provider with data centers in California, North Carolina and Amsterdam, as well as managing the data needs of an office complex in Mountain View owned by Google

- Providing automation solutions for datacenter operations for several large well known clients in such diverse verticals as mobile storage, green energy, security auditing, and product recalls
- Rollout of Ansible 2.x and open sourced Red Hat Ansible Tower
- Automation and monitoring of AWS infrastructure for managing resources in RDS, Route 53, and EC2 in Cloudwatch with Centos and Debian Linux
- Automation of provisioning into AWS, and GCP of Centos Linux and Windows
- Troubleshooting VPNs between on-premise devices and AWS
- Oncall Duty

10/15 – 11/16 Kentik. Inc, San Francisco, CA

Senior DevOps Engineer

Responsible for DevOps Engineering for a SaaS provider of DDoS analysis and mitigation

- Buildout of puppet infrastructure spanning production and development on Centos Linux
- Customer On-premises solution buildouts
- Dockerization of internal services
- Design and build out of DNS based service discovery system for Docker container management
- build-out of Icinga2 replacement for legacy monitoring services in GCP
- Oncall Duty

03/14- 10/15 Cloudmark, Inc. San Francisco, CA

Senior System Engineer

Responsible for DevOps Engineering for an Enterprise class mobile/email security provider

- Dockerization of internal services
- Ceph storage cluster management
- Migrating key development systems during colocation migration
- Built custom Linux provisioning systems for Rackspace and GCP utilizing APIs/puppet
- Automating provisioning of Active Directory DNS
- Responsible for scheduled production code pushes
- Oncall Duty

03/11 – 09/13 Yahoo! Finance and Frontpage Sunnyvale, CA

Senior Service Engineer

Responsible for Service Engineering of Yahoo! Finance

- App monitoring (Nagios/Splunk) and building new monitoring packages for FreeBSD & RHEL
- Deployed Splunk for application log mining
- Responsible for application instrumentation and associated monitoring
- Responsible for documenting new alerts and maintaining monitoring system configurations
- Responsible for daily operations of Y! Finance's quotes feed systems
- Automation of new Yahoo homepage code deployments
- Responsible for scheduled production code pushes
- Data center migration and consolidation efforts
- Converted quotes feed architecture from multicast to unicast

Work History

Total Work Experience: 15 years

- **Devops Engineer** Apple, Inc
Sep 01, 2024
- **Senior Devops Engineer** Paramountplus
Oct 01, 2019
- **Senior Devops Engineer** Roche
Jul 01, 2018
- **Senior Systems Engineer** Bloomip
Nov 01, 2016
- **Kentik, Inc Senior Devops Engineer**
Oct 01, 2015
- **Senior Systems Engineer** Cloudmark, Inc.
Mar 01, 2014
- **Senior Service Engineer** Yahoo! Homepage
Jan 01, 2011

- **Sr. Linux Administrator Fox Digital Media / Canvas Technologies**
Jan 01, 2010

Education

- **Pre-Bachelors** | Rutgers University, College of Engineering

Skills

- **load balancing** - 20 years
- **distributed computing** - 15 years
- **engineering** - 20 years
- **devops** - 9 years
- **infrastructure** - 8 years
- **architecture** - 7 years
- **mentorship** - 7 years
- **upgrades** - 6 years
- **apache http server** - 5 years
- **apache kafka** - 5 years
- **elasticsearch** - 5 years
- **java** - 5 years
- **node.js** - 5 years
- **php** - 5 years
- **tier 2** - 5 years
- **splunk** - 4 years
- **automation** - 18 years
- **storage** - 9 years
- **software** - 7 years
- **operations** - 6 years
- **configuration** - 4 years
- **kubernetes** - 1 years
