

WONDWOSEN.F. BELAY

(CERTIFIED **MULESOFT** DEVELOPER)

PROFILE

- Good experience in **Agile** Software Development Life Cycle including Requirement Analysis, Design, Development and Testing of **Mule** applications.
- 7 years of experience on Anypoint Platform (Design Center, **Exchange** & **Management**), **Mule** ESB, Anypoint Studio
- Good experience in **API** led connectivity **architecture**
- Experience in building complex **Mule** Flows, Scopes, Error Handling strategies, Message Filters, Validation, Transformation, Message Enricher and Flow Controls.
- Used several connectors like HTTP, **Database**, **Salesforce**, Workday, **FTP**/SFTP and several Messaging Que connectors.
- Have used SQL and **database** technologies extensively on several projects. Worked extensively on writing efficient SQL to read and write data.
- Worked on developing batch integrations to transfer data in bulk between enterprise applications using **Mule** ESB.
- Good experience with Credentials Vault (Secure Property Placeholder), Payload cryptography and transport **security** Protocol (SSL/TLS and SSH)
- Prepared Munit test cases for **Mule** flow validation
- Utilized GitHub repository to run Jenkins for CI/CD.
- Familiarity with NCIS X12 data format for various B2B Financial EDI transactions
- Strong team player. Worked on projects with different team sizes.

TECHNICAL SKILLS

Anypoint Platform: **Mule** ESB 3.9.x/4.1.x (Cloud Hub Instance & On-prem Instance), **API** Designer (RAML), **API** Manager, Runtime Manager, Anypoint Studio, Anypoint Partner Manager for B2B EDI, Anypoint Visualizer

Web technology and web service: HTML, CSS, AJAX, REST, **SOAP**, WSDL

Connectors: HTTP/HTTPS, **Salesforce**, **Database**, Oracle EBS, Workday, File, **FTP**/SFTP, AMQP, **JMS**, Anypoint MQ, etc.

Message Transformation: JSON, XML, Data Weave, **Java** Collections, Data Mapper

Cryptography and Security: JCE, XML, PGP, SSL/TLS, SSH

Database: TSQL, PL/SQL, MongoDB

CI/CD & Version control: Jenkins, Bamboo, **Maven** automation, GitHub, Bitbucket

Operating Systems: Window 7/8/10, Linux

Languages: **Java** script, Python, **Java** Basics

Remote access tools: PuTTY, WinSCP

EXPERIENCE

Credit One Bank (October 2020 - Present) **MuleSoft developer** Las Vegas, NV (Remote)

Part of **Mule** Project team, coordinating with business stakeholders to understand, analyze and prioritize requirements and user stories in sprints. Development planning, setting goals, and estimating effort is also part of the role. I am producing design and **architecture** documents, developing new **API**'s, implementing **API** led connectivity integrations for proposed solution architectures. In the meantime, I am also assisting junior developers.

Tasks:

- System, process, and experience **API**'s design using RAML 1.0 specification and implemented fragments for code reuse
- Create **Mule** flows in Anypoint studio using end point connectors (e.g., HTTP, HTTPS, SFCD, Oracle EBS, Oracle OSC, SMTPS, JDBC etc.) and use **Mule** 4 ESB to integrate client/server systems
- Implement different flow scopes and flow controls to improve performance
- Use Dataweave 2.0 for message transformation and importing crypto modules to encrypt/decrypt sensitive fields in payload
- Prepare and implement extensive list of global error handling scopes for APIKit based projects
- Use of different queueing technologies including Anypoint MQ, VMQueue and Active MQ
- Apply **OAuth** 2.0 /JWT token/Client Id Enforcement for Access and TSL/SSL for transport **security**
- Make use of Splunk for logging and **monitoring** purposes in both Production as well as non-prod environments
- Use Jenkins pipelines for automatic deployments for projects into cloudHub and on prem deployments (Kubernetes Cluster Deployments)
- Monitored and tested application performance and identify potential bottleneck, develop solutions, and collaborate with developers and Quality Testing leads on solution implementation to increase the performance.
- Use Anypoint Partner Manager to implement B2B EDI transactions using ANSI X12 data format

Woodriver Energy (April 2018 – September 2020) –**MuleSoft Developer** (Denver, CO) (service provider)

Member of Project **delivery** team, my main role was to design **API**'s using RAML specifications, build system, process and experience **API**'s, publishing and managing **API**'s, applying **policies**, Anypoint **monitoring**, **API** documentation, implement **MuleSoft** based orchestrations following **MuleSoft**'s recommended **API** development practices. I also developed and executed complimentary MUnit tests with more than 90% code coverage, identify, debug, and resolve defect cases with **MuleSoft** (find workarounds where fix isn't available), identify/highlight risks, code review, enhancements, Anypoint MQ, consuming **SOAP** and REST services.

Tasks:

- Creating High level and Detail design for ESB **integration**.

- Develop message flows that used MQ, HTTP/HTTPS, **FTP**/FTPS protocols using respective nodes.
- Created different Interface Design Document for ETL and Applications.
- Implemented reusable flows/sub-flows such as error handling, logging, and **monitoring**.
- Working Knowledge on MQSC commands and setting up Distributed Queue **Management** and set up MQ **monitoring**.
- Develop, test, and consume message flows that are exposed as both **SOAP** and Rest services to consumer applications.
- Perform appropriate message transformation using XSLT, ESQL and **Java** to mediate message format discrepancy between service consumer and provider services.
- Created XSD and WSDLs for implementing web services in IIB and DataPower.
- Created high performance, **security**-rich, point-to-point file transfers that can eliminate dependency on unreliable file transfer protocol (**FTP**) exchanges.
- Secure Web services using SSL mutual authentication, digital signatures, WS-**Security** including configuration of cryptographic keys and SSL policies in DataPower

Merchant Bank (December 2016 – March 2018) – **MuleSoft Developer (Winona, MN)**

As part of a presales POC, developed **integration** software artifacts and assisted in architectural and development best practices according to **MuleSoft** recommended style and guidelines. Helped develop an integrated **API** network connecting several systems including Fenargo, **Microsoft** Dynamics 365, Back Base and Suntec. Produced the middleware required to run a POC internet banking platform and simplifying existing system architectural elements, introducing reusability of produced artifacts to the system, and allowing for **API** network analytics and **monitoring**.

Tasks:

- Performed problem determination and problem source identification by troubleshooting and provided production support.
- Analysis of existing middleware applications and services and prepare migration plan.
- Work with **customer** project **management** team to define and elaborate their requirements.
- Prepare technical documents and turn over documents.
- Deploy applications to different environments (Test, QA, and PROD).
- Performed end-to-end testing, resolved problems, and validated the test results.
- Provide support for existing applications in all environments.

EDUCATION /
CERTIFICATION

MSc in Offshore Technology

University of Stavanger, Norway – June 2016

B.Sc. Civil Engineering

Addis Ababa University, Ethiopia – July 2009

****Mule 4 Certified****

Wondwosen Belay

- Queen Creek, AZ, US
