- Data Asset Management, Enterprise Architecture, and Information Integration specialist: enterprise architecture, web e-commerce, business intelligence, big data integration, strategic data warehouse and CRM, operational systems, and data analysis and reporting. Business analysis, process and conceptual modeling, and re-engineering expertise, including information technology strategy planning and process re-engineering experience with several Fortune 500 firms.

Technical Skills

METHODOLOGY

TOGAF, Zachman Information Architecture Framework, IDEF0, IDEF/1X, RUP, Unified Modeling Language, Object-Oriented Software Engineering, Object Modeling Technique, Star Schema and Dimensional Modeling, Information Factory, Information Engineering

SOFTWARE/TOOLS

Infosphere, Erwin, BPwin, Design/IDEF, ERStudio, Mega Suite, ArgoUML, Eclipse (modeling), iGrafx, XMLSpy, Oracle BI Suite, Oracle Forms, Oracle Portal, Crystal Enterprise, Informatica, TogetherJ, Rational Rose, Paradigm Plus, System Architect.

DATABASES

Oracle, DB2/QMF, SQL/DS, Teradata, Adabas, Datacom/DB, MS SQL Server, MS Access

SYSTEMS

Windows, UNIX, MVS,

Career Experience

Intercontinental Hotels Group, Inc., Atlanta, GA

February, 2009 – Present

Director, Enterprise Information Architecture

Responsible for all aspects of information architecture strategy, planning and integration around SOA and EDA including reference information architecture, conceptual business services, information services, canonical messaging models, event ontology and tracking strategy, real-time data integration and data architecture. Reporting to VP, Enterprise Architecture and Security.

- Introduced and socialized the concept of “stakeholder roles” and associated event lifecycles for the various individual interactions that occur at IHG. Examples include Leisure Guest and Business Traveler Journey, Franchise Owner Contract Negotiation and Quality Evaluation, Employee On-boarding, etc. The purpose was to demonstrate the ability to associate events across roles to a single individual to understand the true nature of an individual’s relationships with the company. Included leading edge POC’s around tracking consumer sentiment based on survey responses including free-form text, Big Data positioning for more intense analysis, and complex event processing and tracking to accumulate as many touch-points as possible across the IHG system estate. This work was the strategic culmination of several other initiatives that pursued integration around key IHG concepts.
- Developed architecture and implementation around a back-end data integration strategy that brought numerous operational domain data stores into a fully integrated 20TB ODS positioned in IHG’s Teradata EDW. The resulting integrated store became the “raw materials” for all downstream analytic and predictive capabilities. Also included architectural provisions for Big Data and High Performance Analytics. Platforms under review include leading edge offerings from Pivotal, Cloudera, HP Vertica Systems, SAP Hana and EMC Greenplum.

- Developed **data** strategy and **implementation** approach for \$35M CRM and Loyalty custom system design. Planned and implemented 360 degree perspective of the “guest” utilizing IBM Initiate consumer MDM identification and **management** hub. This platform introduced the business capability of identifying and associating numerous IHG business scenarios to a single individual, including Guests, Owners, Corporate Contacts and Employees. Implemented **Information** Factory **data architecture** pattern around the guest domain. Initiative resulted in enhanced perspectives on over 300M previously “unknown” guest customers.
- Developed **data** strategy and **implementation** approach for \$17M Sales Force Automation **project** utilizing Salesforce.com and IBM Initiate corporate organizational MDM hub. Integrated Sales domain concepts and **data** into the existing **Information** Factory **architecture**. Provided the first real opportunity for IHG to comprehensively understand the full perspective of our Corporate Customers. Initiative resulted in a new “insight factory” concept **implementation** that focused on new and previously unknown perspectives of business travelers and their employers.
- Based on recent directives identified by a new CIO, given responsibility for the **Information Architecture** department within **Enterprise Architecture**. Responsibilities include planning, strategy, roadmaps and guidance around SOA, EDA, and **enterprise data architecture** and analytics.

Daugherty Business Solutions, Atlanta, GA

July, 2007 – January, 2009

Senior Consultant

Fortune 500 **strategic** consulting in the areas of **Enterprise Architecture**, **Enterprise Data Management**, **Business Intelligence** and Conceptual **Solution** Design. Member of Business **Intelligence** Line of Service core definition team.

- **Manheim Auto Auctions** – Responsible for definition, **development** and **implementation** of the Manheim **enterprise data** model.
 - Completed a fully attributed EDM covering nine business subject areas within the Manheim organization.
 - Defined canonical object models, **data** models, and message models (XML Schema) for the Customer and Vehicle subject areas.

Country Financial, Atlanta, GA

October 2001 – June 2007

Sr. Manager – Enterprise Architecture

Managed a **team** of 13 highly skilled **technology** architects with experience across the board in process, **infrastructure**, application and **data architecture**. Developed mission, principles and roadmap for the **architecture** function.

- Introduced **Enterprise Architecture** approaches and **governance** to the various **development** organizations, and instituted programs to insure its adoption into the company.
- Responsible for coordinating **architecture** activities within several major SOA and Master **Data Management enterprise** class initiatives.
- Developed business **intelligence** conceptual **architecture**, presented concepts and design to **senior management** and implemented production dimensional models (claims and policy) for the **strategic data** warehouse **project**. Cost savings in the first two years exceeded \$3.5M.

Thinkologies, Inc., Atlanta, GA

February 2000 – August 2001

Director, Enterprise Data Management

Primarily responsible for **management** of the start-up organizations **data** resources; including: 1) business conceptual model, 2) operational process **data** design, **implementation** and administration, 3) application design **data** mapping (EJB/OO to Relational), 4) Business **Intelligence architecture** and **data** warehouse conceptual design and **implementation** 5) ETL design and **implementation**, 6) standards, procedures, policy and **security**, and 7) **Data Management** operations budget.

- Developed the business conceptual model and resulting **enterprise data** model and standardized business terminology among various internal and external stakeholders.
- Designed and implemented a unique “feedback” oriented **data** warehouse that categorized user responses and survey elements as “facts” **sharing** common dimensions organized around the client marketing program structure and customer analytical variable definitions.

Highland Technology Group, Atlanta, GA

Principal

Co-founder and company officer responsible for marketing strategy and business development, operations, and legal. Also responsible for pursuing the Data Architecture Services program within the company.

- BellSouth Corporation – Senior Data Architect responsible for ETL processes used to structure data for the BellSouth Consumer and Small Business web-based product catalog systems.
 - Created conceptual model and database design for the Bellsouth.net "Bellsouth Buzz" consumer web portal.
 - Developed detailed requirements, conceptual analysis and process design for Bellsouth external clients requesting electronic commerce solutions involving Bellsouth products and services.
- VerticalOne Corporation – Senior Data Architect responsible for data management strategic planning.
 - Consulted on initial conceptual approach to VerticalOne's multi-channel account management strategy. Facilitated sessions to develop business conceptual model, and worked to design implementation framework and concepts.
 - Conducted data warehouse design brainstorming session around primary dimensional modeling concepts utilized in the VerticalOne operational systems.
- Vanstar, Inc. – Program Manager, Data Integration responsible for automated network operations center program development.
 - Responsible for data management architecture design and development for Vanstar's network operations center development initiative (StarCenter).
 - Integrated the StarCenter NOC repository (basically a large scale integrated data warehouse supporting advanced system management capability) with existing trouble ticketing, call management and automated notification processes.

Spectrum Technology Group, Sommerville, NJ

Senior Consultant

Senior Consultant responsible for enterprise level data management consulting engagements.

Equifax, Inc., Atlanta, GA

Internal Consultant

Primarily responsible for enterprise level data management strategy and infrastructure implementation.

Used: Erwin, TogetherJ, Paradigm Plus, Oracle, DB2

Kawneer Company, Atlanta, GA

Senior DBA

Primarily responsible for enterprise level database management design, implementation and administration.

Cox, Inc., Atlanta, GA

Database Analyst

Primarily responsible for enterprise level data analysis, strategy and infrastructure implementation.

Education

B.S., Mathematics, Birmingham Southern College, Birmingham, AL

Post-graduate studies, Georgia State University, Atlanta, GA
