

EMMANITH BABU

Mainframe Developer

Phone: 9293677246

Email: emmanithbabubussa@gmail.com

EXPERIENCE SUMMARY

- Around 8+ years of professional experience in the Software Analysis, Design, Development, Testing, Maintenance and production support on Banking and Social Security benefit domains on IBM Mainframe applications.
- Conversant with all phases of project Life Cycle including Requirement Analysis, Program Design, Development, Unit testing, System Testing, Integration Testing, Maintenance and Documentation.
- Extensive experience with large databases including DB2 & ORACLE.
- Having work experience at Client place UK (New Castle)
- Extensive knowledge and work experience in COBOL II, RM-COBOL, CICS, DB2, JCL, UNIX and VSAM.
- Extensively used debugging tools such as XPEDITOR and INTERTEST.
- Hands on experience on DB2 tools such as QMF, SPUFI, FILE-AID, DB2 PLATINUM.
- Expertise in using configuration management tools CHANGEMAN, ENDEVOR, ELIPS, LIBRARIAN and PANVALET.
- Excellent knowledge of both Batch and Online Systems running on Mainframes.
- In-depth working knowledge of the software development life cycle (SDLC) and excellent analytical and programming skills.
- Extensive experience on various Mainframe Application Development, Systems programming and Testing Tools XPEDITOR, SMARTTEST, IBM Debugger Tool, PERIGRIN, Confidential Internal R2DS Test Harness Tool and INTERTEST including FILE - AID for MVS/DB2, SYNCSORT, PL/1, MQ Series, QMF, POINTERS, STROBE, OMEGAMON and SPUFI.
- Extensive experience on various Mainframe Configuration Management Tools including ENDEAVOR, CHANGEMAN.
- Basic Knowledge of 5010 EDI Standards.
- Expertise in knowledge acquisition methods, system study, architecture analysis and making High Level Design and Low Level Design Documentation.
- Performed analysis of current functionality and recommend process improvements for enhancement.
- Highly motivated with the ability to work effectively in teams as well as independently.
- 24x7 production support as a primary response for both batch & online abends.
- Experience in all phases of Software Development Life cycle (SDLC) -- Requirements Gathering, Analysis, Construction, Unit Testing, and Support to various Testing techniques - Integration, Regression Test and Deployment Support.
- Roles played: Mainframe developer (Software Engineer), Senior mainframe developer (Senior Software Engineer), Mainframe Tester

- Interested/Willing to learn new technologies based on the business requirement (rapid adopting ability for the new technology).
- Worked with multiple interfaces (from different vendors) in sending/receiving data files as well as with different interfaces having different technologies.

TECHNICAL SKILLS

Languages: COBOL, COBOL-II, MFCOBOL, JCL, REX, C, COBOL POINTERS, MQ Series, Easytrieve.

Business Intelligence: Informatica 6 and 7

Databases: DB2v10, IMS, VSAM and SQL/ORACLE, SQL Server.

Environment: s: OS/390, MVS/ESA, Z/OS, AIX, UNIX, Windows 2000 / NT / 98 / 95, MS Visio.

OLTP: CICS, XML AND HTML

Configuration Tools: ENDEVOR, CHANGEMAN

App. Dev Tools: FILE-AID, FCT, SPUFI and QMF Testing/Debugger

Tools: XPEDITER, SMARTTEST, IBM Debugger Tool, Confidential R2DS Test Harness Tool, INTERTEST, IBM Debugger Tool, Traceability Matrix and QC

Tools: SUPERC, FILE-AID, XML, SDF, FCT, ABEND-AID, SYNC SORT, CA7, NDM, SDSF, ISPF, VISIO, OMEGAMAON, TSO, JES2, SharePoint, QTP and Peregrine Incident Management Tool, ACF2, VTAM, STROBE.

EXPERIENCE DETAILS

Bank Of America, North Carolina, United States||Oct 2022 – Present

Mainframe Developer

Responsibilities:

- Prepared Design specification and program specification for several application programs in Event Manager and Campaign Engine.
- Involved in preparing functional specification for Event Manager Module.
- Extensive coding done in COBOL and DB2 for new programs. Also amended many existing code without effecting to existing functionality
- Develop mainframe applications including new & existing application development, maintenance and enhancement for various projects using COBOL, JCL, PL1, VSAM, DB2 and CICS in the IT industry in Banking & Financial services domain
- Developed and maintained Endevor packages for promoting COBOL and JCL code changes across development, test, and production environments

- Utilized **Endevor** for version control, code promotion, and **deployment**, ensuring organized and efficient application lifecycle management
- Managed and controlled **mainframe** application versions through **Endevor**, facilitating smoother and more structured releases
- Coordinated code changes and promotions across multiple environments using **Endevor**, supporting **agile** development processes
- Gather and analyze requirements, understand end-to-end application functional specifications and build strategies based on projects needs
- Develop new applications **software** while maintaining and enhancing existing applications
- Define, document, analyze, code, implement, study and review project status along with developing & coding programs, applications and enhancements based on agreed SLAs
- Review & edit requirements, business processes and recommendations related to proposed solutions
- Performed restart logic for File driven and none file driven logic for several application programs.
- Prepared Test script for unit testing and executed.
- 24x7 production support, provide resolution to production job abends, attend conference calls with business operations, system managers if any issues in batch stream and Online stream.
- Gather requirements via discussions/meetings with business users and IT Management.
- Involved in batch / Online cycles monitoring and ABEND fixing which part of production support is and creating ABEND logs for future reference. Providing the permanent fix the frequently getting abends.
- Supported in UAT and System Testing and perform defect fix which part of Testing.

Environment: **COBOL**, MFCOBOL, **JCL**, **DB2**, **CICS**, VSAM, TSO/ISPF, SPUFI, QMF, FILE-ID, XPEDITER, XMLHSBC R2DS Test Harness Tools and **ENDEVOR**, ABEND-AID, OMEGAMON, REX, SYNC SORT, PL/1, **IBM** Debugger Tool, CA7, **COBOL** POINTERS, MS VISIO, QC, Easytrieve, MQ Series, SQL Server, PRISM, Server, JES.

CVS Health, Woonsocket, United States||Jan 2021 - Sep 2022

Mainframe Developer

Responsibilities:

- Review Business Use cases, Initial Requirement (IR) documents and understand the requirements.
- Prepared several function documents like Functional Specification, Message Specification, and File Specification.
- Involved Coding new programs and amend existing programs.
- Prepared Test script for unit testing and executed.
- Involved in System Testing and **Deployment** Support
- Mentor the team in building a complete deliverable product by integrating various portions created during the development cycle
- Provide high-end development solutions and troubleshoot all issues related to development, coding, testing, implementation and **deployment** of applications and **software**

- Design and develop code applications as per technical and functional programming standards
- Handle various duties like monitoring, developing, updating and modifying existing programs by using knowledge of **mainframe**
- Assist in various **mainframe** programming projects ensuring delivery within specified time lines and highest level of quality using appropriate development methodologies
- Implemented automated workflows in **Endevor** to streamline the process of **software** delivery and reduce manual errors
- Worked with team members to establish best practices for **Endevor** usage, ensuring adherence to versioning and **deployment** standards
- Worked closely with development, testing, and operations teams to ensure **Endevor** processes were aligned with project timelines and delivery requirements
- Provided training and guidance to junior developers and teams on using **Endevor** for version control, code promotion, and **deployment** management
- Worked with database administrators and system architects to integrate **Endevor**-based workflows with **DB2** and other backend systems, ensuring smooth data and application code flows
- Streamlined **Endevor** processes for continuous integration and continuous **deployment** (CI/CD) within the **mainframe** environment
- Excellent understanding of the system(s) being developed, coded, enhanced, maintained or supported by the team
- Develop scalable and creative technical solutions in close collaboration with the Application
- 24x7 production support, provide resolution to production job abends, attend conference calls with business operations, system managers if any issues in batch stream and Online stream.
- Gather requirements via discussions/meetings with business users and IT Management.
- Involved in batch / Online cycles monitoring and ABEND fixing which part of production support is and creating ABEND logs for future reference. Providing the permanent fix the frequently getting abends.
- Participate in Client/Team meetings send regular status updates and Task assignments to the Team members.
- Full time first level production support for **mainframe** applications and always given high priority for the production issues. Analyze the production problems and take the action immediately. Perform code changes or data patching if necessary and all the QMS documents to be updated accordingly. If the issues due to other teams, co-ordinate with the other teams to follow up to solve immediately. And inform management on up-to-date status.

Environment: **COBOL**, MFCOBOL, **JCL**, **DB2**, **CICS**, VSAM, TSO/ISPF, SPUFI, QMF, FILE-ID, XPEDITER, XMLHSBC R2DS Test Harness Tools and ENDEAVOR, ABEND-AID, OMEGAMON, REX, SYNC SORT, PL/1, **IBM** Debugger Tool, CA7, **COBOL** POINTERS, MS VISIO, QC, Easytrieve, MQ Series, SQL Server, PRISM

Ascension, Missouri, United States|| Oct 2018 - Dec 2020

Mainframe Developer

Responsibilities:

- Working on Enhancement and Maintenance type of Work Requests
- Following entire SDLC processes like Analysis, Estimation, Design, Coding, Testing, Implementation and Review.
- Analyzing the requirements and prepared HLD and LLD specification documents.
- Identified data structures for new tables and changed impacted systems for this system.
- Written new programs and changed existing impacted programs for IDMS system.
- Reviewing the Program Specifications and Program Code.
- Prepared Impact Analysis Document before changing the existing programs.
- Program development using COBOL, JCL, DB2, CICS.
- Developed new CICS screens (MAPS).
- Identifying, Unloading and Loading Test data from Production to Test regions.
- Used CHNGEMAN Tool to work with Production and Test environments.
- Used XPEDITOR tool to check the flow of the batch and online programs after code changes.
- Writing the SQL queries against the database using QMF and SPUFI.
- Estimated time and efforts for the Enhancements.
- Preparing Unit Test Cases as per the new code.
- Involved in internal reviews like code walkthroughs, inspection and unit-review tests of converted programs, copybooks and JCL's etc. and review of quality control documents.
- Involved in Unit testing, functional, integration and regression testing.
- Prepared Program hierarchy flow-charts by using VISIO tool.
- Involved in SQA Testing and prepared Test Cases, Test Plans, and Scenarios.
- Solving Problem tickets/Incidents of severity 1,2 and 3 within time
- In depth analysis of application and fixing bugs if any and enhancing the system.
- Coordinating weekly Tec talk meetings.
- Preparing the test plans and test cases.
- Trouble shooting any issues while implementing new application programs.

Environment: COBOL, JCL, DB2, TSO/ISPF, SPUFI, MS-OFFICE, QMF, Peregrine Incident Management Tool, FILE- AID, XPEDITOR, ENDEAVOR, MQ Series, PERIGRINE and IBM Debugger Tool

Experian, Costa Mesa, CA|| Jan 2017 - Sep 2018

Mainframe Developer**Responsibilities:**

- Analyzing the requirements and prepared technical documentation and LLD.
- Written one time batch programs for creating the empty files which are required.
- Written new programs and changed existing programs.
- Modified the existing programs as per the new functionality.
- Reviewing the Program Specifications and Program Code.

- Prepared Impact Analysis Document before changing the existing programs.
- Program development using COBOL, JCL, DB2, CICS, VSAM.
- Monitoring the Batch jobs and providing remittance support.
- Involved in creation of DB2 stored procedures.
- Identifying, Unloading and Loading Test data from Production to Test regions.
- Used CHNGEMAN Tool to work with Production and Test environments.
- Used XPEDITOR tool to check the flow of the batch and online programs after code changes.
- Worked with PPT, PCT, TCT, FCT, DCT and TST tables to register CICS components.
- Writing the SQL quires against the database using QMF and SPUFI.
- Extracting (Data Carving) the collection of data from larger data sets.
- Used NDM (Connect Direct) for transferring the data sets across the regions.
- Developed new CICS screens (MAPS) and used TDQ's and TSQ's in online process.
- Comparing the test results before performing the test and after performing the test.
- Preparing Unit Test Cases as per the new code.
- Involved in Code review, Test results review and documentation.
- Involved in Unit testing, online system testing, functional, integration and regression testing.
- Prepared Program hierarchy flow-charts by using VISIO tool.
- Estimated time and efforts for the Enhancements.
- Used Quality center to write test cases and also used as a repository to store all the Test documentation and Test cases.
- Involved in SQA Testing and prepared Test Cases, Test Plans, and Scenarios.
- Define requirements using Quality Centre and generate Traceability Matrices to ensure that all the requirements are covered by the test cases
- Involved in internal reviews like code walkthroughs, inspection and unit-review tests of converted programs, copybooks and JCL's etc. and review of quality control documents.

Environment: COBOL, CICS, DB2, JCL, CHANGE MAN, XPEDITOR, INTERTEST, SQL, FILE-AID, SPUFI, QMF, IDCAMS, FTP, ABEND-AID, DB2 PLATINUM, SORT.

State Street Corporation, Boston, Massachusetts || Sep 2015 to Dec 2016

Mainframe Consultant

Responsibilities:

- Gather requirements via discussions/meetings with users, IT Management.
- Analysis on Function Design and High-Level Functional Design
- Preparing Technical Design, Test guidance and Review.
- In depth analysis of application and enhancing the system if any rectification.
- Task includes development of online screens (BMS Maps) and programs to display selection to open and close user accounts.
- Done the Impact analysis and research of the affected system.

- Program Modification using COBOL, JCL, DB2, CICS, and VSAM.
- Identifying, Unloading and Loading Test data from Production to Test regions.
- Generating various adhoc and critical reports as per requirement of the business.
- Used ENDEVOR Tool to work with Production and Test environments.
- Used XPEDITOR tool to check the flow of the programs after code change.
- Writing the SQL queries against the database using QMF and SPUFI.
- Involved in SQA Testing and preparing Unit Test Cases as per the new code.
- Comparing the test results before performing the test and after performing the test.
- Coordinating with the programmers while coding and Testing
- Work with Client IT Management & staff for co-ordination of System and end user testing.
- Participate in Client/Team meetings send regular status updates and Task assignments.
- Create weekly status report and participation in team meetings.

Environment: COBOL, JCL, VSAM, CHANGEMAN, INTERTEST, CICS, CICS BMS SCREENS, QMF, CA7, DB2, MQ Series and QC

Emmanith Bussa

- Jersey City, NJ, US
