Core Technical Experience

- **BODS/Syniti ADMM (Advance Data Migration Management), Migration Cockpit, S/4 Hana Migration Consultant** A Seasoned S/4 HANA Data Migration consultant including Data Integration, Conversion and ETL, Technical Solution Architect & Migration Expert/Lead for S/4 Hana & Data Warehousing. Hands-on, 20+ years of Extensive Experience in Migrating legacy data (SAP ECC and Non-SAP) to S/4 Hana using Syniti (Replicate, Syniti Mapping, Syniti Admin Tasks, Syniti data quality etc.) & Migration Cockpit App (earlier LTMC/LTMOM), Win Shuttle, SAP Business Objects Data Services (BODS), Information Steward and BODS for Cloud Platform CPI-DS). Several years of experience in Data Profiling & Data Quality. Expert in all areas (end to end) of S/4 Hana Data Migration, ETL, Data Transform, Data Quality and Data integration space:

Highlights of Expertise

- a) Successful Data migration implementation to S/4 HANA 2024 and 2025 using greenfield and brownfield approach. Several years of expertise in obtaining cross-functional alignment and working in parallel with various teams and business functions. Expert in producing business data validation strategy and execution using various tools such as Syniti Replicate, Syniti Mapping, Migration Cockpit, WinShuttle, BODS, Information Steward, and LTVF to reduce time and automate validation. Expertise with SAP Data models, including Master and Transactional Data. Worked as data lead & provide support on planning, strategy, and execution during cutovers, mock loads, and dress rehearsals leading up to production cutover, Managed development and testing activities. SAP HANA – SLT/BODS replication Methodologies.
- b) Participated in project data migration activities to support the successful data conversion from ECC to S/4HANA (Green field & brownfield implementation). Assessed & analyzed existing data structures in SAP ECC & S/4 Systems. Performed data profiling to identify inconsistencies, redundancies and data quality issues. Designed and executed ETL processes (BODS, RFC, ABAP Data flows etc.) to extract data from ECC & S/4 systems. Performed data transformations and cleansing to align with S/4/HANA data models. Ensured successful data loading into S/4HANA using tools like SAP Migration Cockpit, Syniti Migrate etc.
- c) Implemented data validation rules and reconciliation processes to ensure accuracy. Conducted mapping workshop with business, pre and post migration data validation to guarantee data integrity. Worked closely with business stakeholders, functional consultants to understand data migration requirements. Collaborated with functional and technical teams to align data migration activities with overall project goals. Supported data migration testing cycles, including unit testing, Mock1,2,3 & ITC1,2,3, (integration test cycles), and user acceptance testing (UAT). Addressed and resolved data-related issues during testing and post-go-live phases. Ensured compliance with data governance and security standards. Solid understanding of ETL processes and data migration best practices.
- d) Expert level knowledge of SQL and data profiling tools like information stewards etc. Developed queries/programs for data extraction using SQL/ABAP DFs/BODS/RFC from ECC. Strong hands-on experience with SAP Data Migration tools (e.g., SAP Data Services, SAP Migration Cockpit, LTMOM, LSMW). Expert level knowledge of Data Cleansing/Cleansing Burndown (Create, Track, Compute, Obtain & Plot).

- e) Proven experience with Syniti Tools (Syniti Data Migration, Syniti Knowledge Platform [SKP], various modules including Reporting hub, Migrate & Construct
- f) **Syniti Replicate (ADMM)** Installation, on local SQL DB, making sure it meets Syniti replicate requirements, license key, run setup, used standard installation, follow on prompts. Some of many Completed Syniti administrative tasks: Imported Excel, guided setup, server setup, subject areas, development areas, user management user deployment, Role management, Relevancy attributes, script templates (for validation or execution)
- g) **Syniti ADMM Data Mapping:** Imported datasets into mapping, created target tables, mapping the field of a data source execution of ETL jobs. If pre-requisites have been completed then we can access ETL jobs page: ETL Tasks at release, data, target, source level. Syniti ADMM SQL Server (source or target) settings: Used Microsoft SQL Server as a source database for Refresh, Mirroring, and synchronization. The setup process for a refresh replication can usually be completed using Syniti Replicate without additional documentation, as it does not involve access to the SQL Server logs. Pre-requisites: Ensure that you have the Microsoft SQL Server .NET Data Provider (included with .NET Framework). Ensure that you have the System. Data (file name: System.Data.dll) assembly in your path name. Syniti ADMM data quality tasks performed: The Data Quality Parameters settings configured specific to the Quality module of the Syniti Knowledge Platform, specifically to a) number of records downloaded to the data store b) number of records returned by a query c) configured data retention to clean up historical data.
- h) Highly skilled professional with 20+ years of proven track record in significant client-facing roles, utilizing strong technical, analytical and management skills to complete complex systems integration and governance within Pharmaceutical, Healthcare, Utility, Retail, Federal, defense, manufacturing and food sectors. Delivered multiple SAP implementations on time, on budget. Strategic Planning and Implementation.
- i) I have worked on various data-related initiatives such as migration, validation, ETL, data cleanup, data archiving using tools mentioned above.
- j) More than 12 Successful projects on **SAP Data Migration to S/4 Hana** including Data Modeling, Architecting landscape, Sizing, Administration, Deployment, Upgrade & Optimization, Testing, Landscape Transformation Validation Framework (LTVF), ETL/BODS Framework, BODS Audit jobs, BODS Code migration/Promotion, Change management, Production Rollout and Production support after go-live, using SAP BODS & its tools (Rapid Data Migration to SAP ERP & SAP CRM, DQM for SAP, Information Steward, Rapid Marts, All-in-One pre-built Jobs for SAP).
- k) Extensive Experience working on Data Integration, Master Data Conversion, Data Migration & Data Cleansing in SAP ECC/CRM/BW/HANA & non-SAP environments using Data Services. Used SAP Rapid Deployment Solutions (RDS) packages for Rapid Data Migration to ECC. Multiple project experience of implementation of SAP Best Practices Data Migration (BPDM) packages. IDOC processing, reprocessing & error handling experience. Rapid Data Migration to SAP ERP and SAP CRM which is compatible with BODS.
- l) **Deep Syniti Replicate & Syniti Mapping, BODS** experience, including SAP EIM suite – DS, DQ, DM & DQM, RDS, BODS interface with SAP MDG & MDM and Information Steward; used all versions of BODS, including 4.3, 4.2, and lower versions. Managed and governed BODS technical architecture and design, Managed & coordinated BODS code promotion process, BODS user management, repositories management, server management, Performance tuning.
- m) Expert Level Hands-on Knowledge of Integration of SAP BODS DQM with SAP ECC, BW & CRM systems. Implemented Business Address cleansing & Data Cleansing in SAP environment (ECC & CRM).
- n) Data Extractions from SAP Applications (using Extractors, tables, iDocs & ABAP data flows) & load to SAP ECC/BW (using iDocs, Master & Transaction

- SAP structures, LSMW). Expertise to execute and resolve issues related to LSMW Workbench and its recording.
- o) Experience Extracting Data from PeopleSoft. Used BODS as web-service in SAP ECC & CRM environment and used web-service as source in BODS jobs/data flows.
 - p) End-to-end experience: Installation, Configuration, Job Server Clustering, Development, Upgrade, Testing, Deployment, Support & Administration.
 - q) SQL Expert: HANA SQL, SQL Server & T-SQL, Oracle & PL/SQL, Teradata & its utilities, IBM DB2
 - r) Data Extraction & load from/to all major databases (SQL Server & T-SQL, Oracle & PL/SQL, Teradata & its utilities, IBM DB2, Snowflake), flat files & spreadsheets.
 - s) **Information Steward:** (Data Insight, Cleansing Package Builder, Metapedia, Metadata Management), Installed and Configured Information Steward (IS) v5.2.10, Defined profiling rules for Information Steward (IS) v4.2.10 Identified scorecard requirements & Configured Scorecards for Information Steward (IS) v4.2.10 SAP Information Steward for Data Quality Platform: Experience in Match Review Configuration setup & Match Strategy Changes. Created new rules for data quality score card and executed integration projects. Used 'Data Insight' data quality module of Information Steward extensively for basic profiling, rule-based profiling, rules development and scorecard implementation.
Experience with Information Steward Installation and configuration. Configured for SAP Authorization, worked as Administrator/developer. Users, Groups (Administrators, Analyst, Rule Approver, Scorecard Manager, User, Data Steward, & CPB User) & Access privileges (roles etc.) management & Administration. Rights for connections, projects, tasks, folders & objects. Used extensively for data quality & rule validations.
- Experience working with BW process chains. Experience working on getting data loaded through web services, configures RFC webserver on Management console.
- Experience monitoring experience BO & IPS using CMC servers running with optimal performance. Have experience with Fix service packs and major releases, configuring and supporting SSO (Single Sign on) using Windows AD in and SAP/BOBJ environment CMC skills adding users, group security, access levels, folder security, application security, authentication methods, user alias mapping users to AD groups.
- t) In depth experience in BODS in implementation, support & maintenance operations. Extensive hands-on experience in Data Services Configuration, development, migration and troubleshooting. Strong Knowledge of Data Integration, Data Profiling and Data Quality. Heavily used DI transforms such as Query, Validation, Case transforms as well as DQ transforms such as Match, Associate, Data Cleanse & Address Cleanse. Many years of experience Performance optimization/Tuning jobs for high volume and complex transformation scenarios, Configuring DS components including job server and repositories. Expertise to analyze current business requirements and architect solutions within the SAP BI Business Intelligence - BODS Data Services ETL & BO Business Objects environment. 12+ years' experience to Develop data Semantic models in, HANA, SQL server, Oracle, DB2 & Teradata data mart and relevant SAP BODS ETL mappings.
 - u) Used BODS to import (converts into NRDM), export metadata for XML (hierarchical) documents (files or messages) then Used & Processed XML files as source and Target. Defined Format of XML file or message (.xsd or document type definition (.dtd))
 - v) Extracted and familiar with data and table structures with following modules: SAP Production Planning, Customer master, Material master, vendor master and COPA, SD, MM tables. Migrated legacy data to SAP S/4 Hana including following objects: Customer master, Material master, Vendor Master, Cost Centers, GL accounts, and other financial entities.

- w) SAP applications worked with: S/4 Hana, SAP ECC, Service Excellence IS Retail, AFS (Apparel & Footwear), CRM & Production Planning (PP).
 - x) Implementation of SAP Business All-in-One Best Practices (AIO/BP) Data Services Pre-built jobs (Preconfigured Migration Objects) for Rapid Data Migration to SAP ERP & SAP CRM. Experience in Data Migration techniques like migration with AIO packages and data quality transformations, receiving and sending iDocs and integration with SAP ABAP to Data Services.
 - y) Experience in Integration SAP suite of BI products with Business Objects including Business Objects Data Services (Rapid marts), Business Objects 4.1, Crystal Reports and SAP Integration Kit.
 - z) Strong hands on experience with Central Management Console & Lifecycle Management.
- **Recent Roles:** SAP S/4 Hana Data Migration Solution Architect, Syniti Replicate, Syniti Mapping Admin & Developer, BODS ETL Solution Architect, SAP Data Migration Lead, Master Data Lead, Legacy Data Migration Led to S/4 Hana, ETL Architect, Data warehouse Architect, Data Warehouse Manager, BODS Lead consultant, Data Migration Lead, ETL Lead, onshore/offshore Lead/Developer.
 - Extensive Experience with Data governance & its best practices including convergence of data quality, data management, data policies, business process management, and risk management surrounding the handling of data in an organization.
 - Expert level experience in job lifecycle, deployment, Source Control and Methodology (Dev/QA/Prod), Enterprise Best Practices/Reusable Patterns/Frameworks (Logging, Error Handling, Notification, Reporting), Audit/Monitor/Growth Plan of Jobs.
 - Expert level experience in Cleansing, Enhancements, Standardization, address cleansing & Advanced ETL performance tuning for Data Services jobs.
 - Provided technical leadership in following areas: Data Integration, design, development, optimization, testing, and deployment & Administration.
 - Highly detail oriented, strong commitment to timely execution of tasks.
 - Used Reference data extensively (unit of measure, country codes, corporate codes, fixed conversion rates (weight, temperature, and length), calendar).
 - Have Strong Data Analysis, Modeling skills, Strong documentation, communication and organizational skills.
 - Very comfortable on client site interacting with directors, managers, DBAs, developers, end users, testers, functional, non-technical staff, offshore resources and all other team members.
 - Professionalism and good sense of client service. I do things right in first time, 95 per cent of the time.
 - Experienced in working with cross-functional teams. Excellent team player with good organizational, communicational, analytical and logical skills. Collaborated and achieved consensus among diverse groups. Provided task delegation and workload management to the other ETL developers.
 - Ability to handle multiple tasks and work independently as well as in a team, experienced in interacting with Business/Technology groups.
 - Created & maintained high standards of data integration including high level & low-level design documents. Created BODS development standards. Expert in writing BODS custom functions.
 - ETL code, test plan & test result, deployment/migration document and knowledge transfer to production support.
 - Source System Analysis and Semantic Data Modeling using ERWin & other tools.
 - Ability to design scalable models for Performance goals.
 - Knowledge transfer and client staff training as last phase of project.
 - Several Projects on Data Warehousing (using Agile Methodologies), Data Integration, Data Migration, Data Conversion, Data Quality, & MDM (Master Data Management)

implemented successfully from end-to-end (design, installation, configuration, development/upgrade, Testing, deployment & support).

- Metadata in Repository Tables & Views, Recovery Mechanisms. RDBMS Database tables, ERP SAP R/3/ECC/BW (using iDocs, Extractors & Tables), Flat-Files & Spreadsheets used as ETL Sources, Optimization Techniques used (Push-down, Bulk-Loading, Lookup Cache, Parallel Execution, Table Partitioning) Multiuser ETL jobs Development environment Installed, configured, managed & maintained. Central & Local Repositories Management & BODI jobs migrations, 24x7 ETL Production Support.
 - Exploited most of features of SAP BusinessObjects Data Services 4.3.2 (BODI/BODS): Auditing, Scripting Language, Global & local Variables, Email Alerts, Debugging, Profiler Server & Repository, Job Server(s) (port 3500) Configurations, Datastore Configurations, Access Servers (port 4000), System Configuration Set Ups, Job Scheduling, Administrator (port 8080), Impact and Lineage Analysis, Data Quality (Profiler), Try-Catch, BODI functions. Error handling, & trace, statistics error logs. Implemented Change Data Capture (CDC) logic. Created & Configured Microsoft Excel workbook file formats on UNIX platform using Management console/Administration and Designer.
 - Expert in designing and development of simple and complex transformations in Data Flows. Expertise in developing, testing, debugging, documenting, and deployment of complex Batch jobs and Real time jobs to extract data from a variety of data sources. Expertise in transform the data and load the data to specified destinations using SAP Business Object Data Services (ETL). Expert level Experience in cleansing data in Business Objects Data Integrator using various data types and mappings. Expert in implementation of Recovery Mechanisms for unsuccessful batch jobs execution. Expert in SQL writing to perform Complex DML statements (Selects, Updates, Inserts, and Deletes) on database tables. Expert in performance tuning & optimization.
 - Data Warehouse Architecture using Agile methodologies (scrum/Sprint), Data Modeling,
 - MDM (Master Data Management) Implementation.
 - Dimensional Data Modeling, Star Schema/Snowflake Schema (Kimball/Inmon methodologies),
 - Data Marts, Data warehouses Design and Load processes.
 - Writing Detail Design Specifications & Detail Technical Specification.
 - ETL, OLAP, OLTP and Report delivery methodologies.
 - Relational Database Systems like Oracle, SQL Server, DB2, Teradata, and Informix. Unix/Linux Platform including Perl, awk, sed, vi editor, and shell scripts.
 - SAP HANA in-Memory Database: SAP Landscape Transformation (SLT) Replication Server: Downloaded & installed SAP HANA from Service Market Place (SMP) on Linux machine, experience un-installation, stop & starting HANA servers. Extracted data from Customer master, material master, COPA (Cost & Profit Analysis) & several other tables from SAP ECC 6.0 system & loaded to HANA database using Data Services (thru SLT Replication Server). Created connection to Business Objects Information Design Tool (IDT). Created information Space in explorer using HANA tables.
- SAP HANA Modeling using HANA Studio, created packages, Attribute views, Analytic views, Calculation views. SQL Editor: Created schemas, tables (row & column storage) & procedures. Development, Debug, Modeler, Team Synchronizer, Admin Console Perspectives used. Worked on Proof of Concept (PoC). Worked on Sandbox system, & Amazon cloud-based HANA servers. Completed HANA training by Infogen, working on HANA certification.
- SAP HANA Database connected to Data services. Experience taking backup & restore of HANA Database. Creating users is HANA Studio by importing file, & other methods, Rights, Authorization & access privilege management for users to HANA objects. SAP Visual Intelligence connected to HANA. Roles created using HANA Studio.

Created Scripts, complex Stored Procedures in HANA studio. Data Analysis, Variables and Restricted Measures created & used in Analytic views. Views secured by manipulating access, Created Analytic Privileges. Created several views (analytical, calculation & attribute) based on SAP tables for COPA (Cost & Profit Analysis), Material Master, Customer Master. Undergone SAP HANA training. Experience SAP HANA programming including SQL, SQL Script, and CE Script, Administration including managing schemas, Semantic data model objects, import/export content. SAP HANA Security including User Management, Roles, and Privileges.

Experience Summary:

More than 20 years of hands-on experience in System Analysis, Design, Development, Documentation & Project Management in the fields of data Warehouse, Client server technologies which includes several years of experience in Data warehousing tools including Syniti Replicate & Syniti Mapping, S/4 Migration-Cockpit (earlier LTMC, LTMOM) & SAP Data Services (BODS) & Business Intelligence reporting tools SAP Business Objects Administration, Universe Design & Development, Crystal Reports. Extensive Experience in SAP BusinessObjects Data Services 4.3, prior versions.

- Over 8 years' experience as S/4 Hana Data Migration Solution Architect from SAP ECC and SAP AFS (sources) and from non SAP ERPs (Oracle Apps and Microsoft Great Plains), Tools used S/4 Hana Migration Cockpit (Migration template Files, Staging tables and Direct Transfer), WinShuttle to S/4 Hana from ECC & AFS.
- Over 15 years of experience as SAP Business Objects Data Services BODS Data Warehouse Architect, ETL Architect, Offshore and Onshore Lead.
- Over 20+ years of professional experience and successfully delivered several projects in the US IT Industry.
- Several years of Design, Development and implementation experience of product and solutions (SDLC).
- Over 10 years of experience in managing technical teams onshore and offshore.
- S/4 Hana Data Migration Solution Architect. having experience of successfully completing full life cycle Data Migration to S/4 Hana Implementation from requirements till postproduction support.
- Ability and experience to lead the design, development and implementation of data migration, data integration & data conversion solutions in fast paced environment. Maintained and distributed project schedules for complex projects. Managed and communicated with vendors and business users to resolve complex issues.
-

PROFESSIONAL EXPERIENCE

Oil & Gas (July 2023 to Current)

Migration to S4 Hana from ECC using Syniti ADMM, Data Service (BODS)
SAP Data Migration Lead or Migration S/4 Hana Solution Architect/Consultant.

Multi Year Global Project to Migrate 100+ data objects from ECC to S4HANA. Tool used Syniti Migrate, Syniti Replicate, Syniti Mapping and other Syniti tools. Phases Completed, Mock1, Mock2, Mock3 and Go-Live. Data Quality ITC1, ITC2 & ITC3. Worked with Technical Team, Functional Team, Migration Team, Business (to finalize workshops) and offshore teams.

Order to Cash (OTC): Job Master (Quotation), Customer Master, Partner Merging

Multi Sales District logic implemented for Customer Master, Customer - extend existing record by credit **management data**, Customer - extend existing record by new org levels
Pricing Conditions (8), YMP0, YCP1, YCS1, YCS0, YCD0, YCD2, YCF0, YFR1

Finance (RTR): Bank Master, Fixed Assets (incl. balances and transactions)

Current Year Assets, AUC: Assets Under constructions, FI - Accounts Payable Open Item

FI - Accounts Receivable Open Item.

Data Objects Loaded using files: CO - Profit Center, CO - Cost Center, CO - Activity Type
FI - GL Account, FI - G/L Account extend existing record by new org levels, Exchange Rates
Provided Pre load and Post load **data** to business for validation, Fixed **data** issues.

Syniti ADMM Data Mapping: Imported datasets into mapping, created target tables, mapping the field of a **data** source execution of ETL jobs. If pre-requisites have been completed then we can access ETL jobs page: ETL Tasks at release, **data**, target, source level. **Syniti ADMM SQL Server** (source or target) settings: Used Microsoft SQL Server as a source database for Refresh, Mirroring, and synchronization. The setup process for a refresh replication can usually be completed using **Syniti Replicate** without additional documentation, as it does not involve access to the SQL Server logs. Pre-requisites: Ensure that you have the Microsoft SQL Server .NET **Data Provider** (included with .NET Framework). Ensure that you have the System. **Data** (file name: System.**Data**.dll) assembly in your path name. **Syniti ADMM data quality** tasks performed: The **Data Quality** Parameters settings configured specific to the **Quality** module of the **Syniti Knowledge Platform**, specifically to a) number of records downloaded to the **data** store b) number of records returned by a query c) configured **data** retention to clean up historical **data**.

Cosmetics Retail Chain (From July 2022 to Jun 2023):

SAP Data Migration Lead or S/4 Hana Solution Architect/Lead Consultant

- Met business stake holders to understand the business requirements. Worked with functional consultants to understand the blueprint. Configured the **Data** services and Information steward to connect to the **SAP ECC**.
- Reviewed and developed new jobs, work flows and **data** flows to load **data**.
- Responsible for extraction, transforming, and loading **SAP legacy data** by object into **SAP** using **Syniti**.
- Conducted meetings with business shareholders to share the **data quality** scorecards. **Data migration** from **SAP ECC AFS** (Apparel & Fashion) to **S/4 Hana v2022**, 90 plus pages detailed **migration** strategy document was created with all details: Source system exploration, **Data** assessment, **Migration** design, **Migration** build (mock loads and multiple cycles), execution, transition, go-live, & support. As per the **migration plan data** was migrated for following objects plus 35 other objects: Bank, Class, Cost Center, Profit Center, Customer/Vendor/Partner/Supplier, Material Master, G/L Accounts open items, Fixed assets, Purchase orders (open POs), Sales Order (only Open SOs), Material Inventory Balance, Characteristics Activity Type, Functional Location, master recipe, Equipment, Exchange Rate, Routing, Work center.
- **Expertise in Business Objects Data services and SYNITI ADMM ETL Tools for Data Migration** and Integration.
- Tools used: **SAP data services (BODS)** & **Syniti** for **data** extraction, transformation and **data cleansing**. For mapping tasks, simulation and **migration**, Fiori app **Migration cockpit & WinShuttle** were used. **Migration** cockpit has 3 ways to migrate **data** to **S/4 Hana**, a) Template File, staging tables (imported into BODS Designer) & Direct transfer (Select **Data**, Mapping Tasks, Simulate & Migrate, only **SAP ERP** to **SAP S/4**). For **data quality** status **SAP Information steward** was used. Landscape Transformation Validation Framework (LTVF) also used to reduce testing efforts, overall downtime, during go-live by automating validation/testing time.

- Following **data migration** best practices were adhered to: scope determination, evaluated complexity of **data**, established **data** standard, **migration** plan is compatible with current policies, **migration** time frame, business rules defined, information governance, audit, and document at every step of **data migration**, **data quality** assessment was performed, **migration** requirements gathered, **migration** testing, validate and test **data** post-migration. Reported the delivery stats, and issues and worked with **SAP** incidents with **SAP management**. Shared metrics with stakeholders and PMO.
- Using **Migration Cockpit** App (earlier LTMC & LTMOM) & **SAP** Business Objects **Data Services (BODS)** and **Syniti** for On-Premise and BODS for Cloud (CPI-DS).
- Other integrations worked for S/4 **Hana**, ECC to S4 using **Migration Cockpit** App (LTMC/LTMOM), WinShuttle & BODS for Cloud Platform CPI-DS for **SAP IBP**, Configured **data** stores & agents for connectivity between on-premise and cloud via RFC. Swift to S4, Informatica (CRM) to S4 (used **SAP** BAPI Function Modules), S4 to Darwin (Oracle) using CDS views, and Snowflake, S4 to Tibco, ECC & S4 to Swift, ECC & S4 to Open Text (xml), Blue Yonder (Oracle) to S4 (iDocs), and so on related to following tracks Channel Execution, Merchandising, Finance, supply chain, Master **Data**. Used **migration cockpit's** user-friendly interface to manage the **data migration** process which provides template files, and creates staging tables to upload, prepare, mapping tasks and simulate before loading it into the **SAP S/4** system, another option is direct transfer (Select **Data**, Mapping Tasks, Simulate, Migrate), to S/4 **Hana** from **SAP ECC** for several objects.

Utilities Company Los Angeles May 2019 –June 2022

SAP BODS/Syniti Data Migration S/4 Hana Solution Architect/Lead Consultant

Data migration from **SAP ECC** (Utilities) to S/4 **Hana** v2021, 118 plus page detailed **migration** strategy document was created with all details: Source system exploration, **Data** assessment, **Migration** design, **Migration** build (mock loads and multiple cycles), execution, transition, go-live, & support. Architected and configured local, Central repositories and **Management** console. Managed and reviewed **data** conversion rules and **data quality** rules. Worked with business to cleanse the **data**. Designed and documented the **data migration** approach and mentored the team to work in silos. Administered the dry runs and collaborated with security, basis and functional teams. Worked with cutover team to plan the **data** loads and **cleansing** efforts. Debugged and fixed several performance issues in complex **HANA** calc views for Product and BOMs. As per the **migration** plan **data** was loaded (in (dev, QA and Prod environments) for following objects plus 57 + other objects: Class, Cost Center, Profit Center, Customer/Vendor/Partner/Supplier, Material Master, G/L Accounts open items, Fixed assets, Purchase orders (open POs), Sales Order (only Open SOs), Material Inventory Balance, Characteristics Activity Type, Functional Location, Equipment, Exchange Rate, Routing, Work center. Tools used: **SAP data services (BODS)** for **data** extraction, transformation and **data cleansing**. For mapping tasks, simulation and **migration**, Fiori app **Migration cockpit** (earlier LTMC, LTMOM), & **WinShuttle** were used. **Migration cockpit** has 3 ways to migrate **data** to S/4 **Hana**, a) Template File, Staging tables & Direct transfer (Select **Data**, Mapping Tasks, Simulate, Migrate, only **SAP ERP** to **SAP S/4**). For **data quality** status **SAP Information steward** was used. Landscape Transformation Validation Framework (LTVF) also used to reduce testing efforts, overall downtime, during go-live by automating validation/testing time. Following **data migration** best practices were adhered to: scope determination, evaluated complexity of **data**, established **data** standard, **migration** plan is compatible with current policies, **migration** time frame, business rules defined, information governance, audit and document at every step of **data migration**, **data quality** assessment was performed, **migration** requirements gathered,

migration testing, validate and test data post-migration. Used BODS to integrate data with SAP MDM/MDG, which is used to adjust & transfer master data in most optimized way, & distribute and integrate enterprise data seamlessly to all systems.

Experienced with Syniti DSP/ADM tool. Migrated 57+ objects to S/4 Hana using BODS & Migration cockpit in Syniti ADM. Created detail migration strategy/plan (100+ pages). Used BODS for extraction, cleansing and transformation, and Information Steward for data quality. Lead the project from requirement gather to deployment in production over 17 sprints for CSRP and Enterprise Service projects for data quality initiative as enterprise level, collaborated data quality team comprising of business and IT resources regarding data quality rules. Worked very closely with the client teams, developed 20+ scorecards (KDD) with 200+ rules for meter reading, billing and NEM, CCA and master data related rules. Validated & provided failed data to the business used Redwood scheduler. It was monthly sprint event for each release. Used migration cockpit's user-friendly interface to manage the data migration process which allowed to download template, upload file, prepare, mapping tasks, simulate & load (migrate). For cleansing BODS was used, before loading it into the SAP S/4 system. Tools used BODS Information Stewards, Migration Cockpit App (LTMC/LTMOM), Syniti ADM (Migrate) 4.2, BW Hana, Oracle, Snowflake, SAS, Hadoop Impala & Hadoop Hive, Remedy. Scorecards developed with 200+ rules.

Packaging Supplies Company Los Angeles Sept 2018 –May 2019 **SAP BODS Data Migration S/4 Hana Solution Architect/Consultant**

Met business to understand the business requirements and bottlenecks. Reviewed the solution, design and data modeling including satellite data mart tables. Reviewed configuration of Data Services connecting to SAP ECC. Reviewed the profile data and Information Steward. Reviewed the SLT and tweaked the jobs to demonstrate faster query execution using HANA. Debugged and fixed issues in loading and retrieving data from several GP tables. Data Migration from Microsoft Great Plains (GP) to S/4 Hana (v1909) using Migration Cockpit App (earlier LTMC/LTMOM), SAP Data services (BODS), SAP Information Steward (IS). Migration of ERP data from Microsoft Great Plains (GP) to SAP S/4 Hana. Extracted, cleansed and prepared data files for following objects: Customer Master (CC, HDR, Phones, SORG, Tax), Vendor Master (CC, HDR, PORG, Tax, Phones), Material Master, Customer Partner Function, Vendor Partner Function, Customer Credit Limit, Finished Goods Component Inventory Balances, Purchase Info record (PIR), Material Plant, Material Storage Location Extension (SLOC), Material Plant Extension, Material Master Sales Org view, Customer Material Info Record (CMIR), Source List, BP Collection management, CMIR Hard & Soft Exclusions, Customer Emails. Customer with Fuel Charges, Customer Credit contacts, Customer Sales contacts, MRP Consumptions, Quotes & concessions, Resale Certificate vertex, Vendor Identification, ZMM Material, Vertex Client Material Exemptions & several other objects. 30+ Objects migrated: Several text Objects (CMIR text), Customer internal note, customer shipping instructions, customer billing instructions, special handling, and customer Thomas guide, material memo text. Audited migrated data, tracked & resolved defects. Expert in cleansing and standardizing various address attributes, email, phone etc. Expert in using Match transformation to define matching rules, match sets, match levels, match criteria, and break groups. Extensive experience in analyzing and resolving complex technical issues. adhered to data quality standards. Possess strong data and problem analysis skills. SAP Data Services (BODS), SQL server. For data extraction, cleansing and transformation BODS was used. LTMC (Now migration cockpit App) was used for validation, simulate and load. including conversions and migrations to SAP S/4HANA. Landscape Transformation Validation Framework (LTVF) used to

reduce testing efforts, it was very helpful to reduce the overall downtime during go-live by automating validation/testing time as The LTVF tool extracts these **data** before and after transformation and compares them automatically, LTVF version 7.0

Data Quality: **Cleansing data** close to 100 objects like material, customer vendor, storage location, plant extension, customer email, customer contract and several others.

Information Steward: 200 Rules & IS views for them developed, bindings, custom attributes.

Data Insight, Fail **data** provided to business, rules refined and modified. Threshold at binding level, scorecard level etc. review requirement with business and then technical team. Developed rules for sources (**Hana**, Hadoop Impala & Hive, Oracle & other source types)

Pharmaceutical Company Philadelphia Oct 2016 – Sept 2018

S/4 Technical Solution Architect and Lead Developer

Data Migrated to S/4 using **Migration** Cockpit (LTMC, LTMOM), BODS/IS Architect
PACE **Migration** Project: Migrated 80+ objects from **SAP** ECC to S4/**Hana** including Business Partner (Customer & vendor), Material, Bill of Material, Characteristics, Recipes, Functional Location PM, Open PM Orders, etc. Using different technique like CDS views, FM (Function modules), BAPI RFC, iDocs, LSMW, ABAP, WINSHUTTLE, applied complex logic, developed Complex mapping of **data** tables and hierarchies. Used WinShuttle Query, WinShuttle Direct etc. Lead many rounds of **migration** of several objects using RDM/BPDM/AIO BODS jobs. Installed and configured BODS in development, QA & production; performed administration tasks like access issue, configuration of repositories & all other tasks, environments/landscape for Dev, QA & Production. Audited migrated **data**, tracked & resolved defects. Expert in **cleansing** and standardizing various address attributes, email, phone etc. Expert in using Match transformation to define matching rules, match sets, match levels, match criteria, and break groups. Extensive experience in analyzing and resolving complex technical issues. adhered to **data quality** standards. Possess strong **data** and problem analysis skills. Used extensively BODS 4.2.10, Oracle 12c, **SAP** ECC, **SAP** S4, Information Steward 4.2.10. Oracle SQL Developer 4.1, QC-Vera, Excel vlookups, pivots.

Several S/4 **Hana** Objects Migrated using BODS Including following: Business Partner (Customer/ Vendor), Material Master, Bill of materials, Characteristics, Functional Location, Open PM orders, Recipe and several other object.

Information Steward: Configured, Developed & Deployed to Production: Metapedia, metadata. **SAP** Metapedia, **Data** Insight (Profiling, rules, DCA **cleansing** Adviser), **Cleansing** Package Builder, Match review, Custom Attributes, Scorecards, Meta **data** Manager: Provided integrated view of metadata & its relationship i.e. BODS, BOBJ, Modeling, **Hana**, Hadoop. Set the task to run on different frequencies.

Metapedia: Provided a central and shared repository for terms and policies, configured and trained business users. Information Steward 4.2.10

BODS-DQM Configuration: Real time and Batch jobs configured for DQM services between BODS and MDG/S4HANA. Web services & connection configured on the real time and batch jobs on **management** console and address directories installed and configured & thoroughly tested, duplicate entry of vendor/customer (business partner) prevented successfully.

Cross Site **Data Exchange Project:** Migrated **data** (straight & delta) from Trackwise (SQL server), LIMS (Star Lims, Sample Manager & Labware) [Oracle], & **SAP** (BW &

Propagation) to Hana & to Hadoop (Hive & HDFS) using BODS 4.2.10. used DB Visualizer 10 to view Hive data (Hadoop). Information Steward 4.2.10. Linux-MobaXterm, WinSCP. SAP Hana Studio 2.2. Used Ambari for Hadoop Files view and Hive view 2.0.

Banking client in Mexico City Mexico thru SAP America July 2016 – Sept 2016 **BODS/IS Architect and Lead Developer**

Operating reconciliations automation: This project is primarily to show & prepare proof of concept for banking transactions, data migration & data validation using BODS/IS. Migrated data from source system to HANA warehouse removed discrepancies from the data & cleansed. Match Review Configured (clerical review) using SAP Information Steward. Used HANA SQLs extensively including coding several complex HANA SQLs. Several rules configured in BODS and in Information steward for each source system. COBOL Copy files received for following source systems: HANA calculated views, ALTAMIRA ATM, POSRE, STAT6, STAT7, TLF, VISION, ALTAMIRA-CAPTACION, ARQUEO & ICE (Saldos Contables). Configured in BODS & extracted data.

Tools Used: SAP BODS & Information Steward version 4.2.7, HANA database version SPS12, Hana Studio Version 2.3.8

Cereal Manufacturer Battle Creek Michigan Jan 2015 – July 2016 **BODS Architect and Lead Developer.**

BODS-Hadoop Connectivity configured, installed BODS job server on Hadoop edge node, installed Hadoop adapter on BODS Management console, created data store in designer to use Hadoop adapter. Used Hadoop as source and target in BODS. Used HDFS file format to use big data. Installed pig and hive clients on Hadoop edge node. AOS, CLS, ZBB & Joy wave Jobs successfully deployed in production. Developed and extensively tested master data refresh job and deployed in production successfully. KNA, KLA, Purchase Master, HR, Foundation, Material, and several other modules for master data.

Created, modified several SAP BODS Jobs to support the Enterprise dashboards and reporting database.

Performed complex analysis of data impact and lineage that links dashboard data metrics to the database sources including complex SAP BODS Jobs, Workflows, and Data flows. Provided data using BODS for major dashboards that display KPI of the organization. Responsible for coding and unit testing of applications capable of handling large volumes of data in a batch environment. Assisted in the detailed design of the ETL application. Assisted in the triage of code breaks if required Updated the existing development related technical documents and making sure that they are always current. Used Hadoop on Linux platform.

Successfully integrated SAP BW with BODS using RFCs and open hub destination.

Open Hub Destination: The open hub destination is the object that allows you to distribute data from a BI system to non-SAP data marts, analytical applications, and other applications. It ensures controlled distribution across multiple systems. The open hub destination defines the target to which the data is transferred.

Tools Used: IPS 4.1 SP5, SAP Business Objects Data Services (BODS) v4.2.5, Information Steward v4.2.5, Oracle 11g, MS Access, Excel as source and target, Toad, Store Procedures, views, sequences. Oracle Database 11g Enterprise Edition v11.2. CMC, CCM, SQL Server 2014 Stored Procedures, T-SQL, Data Services Management Console, Designer, Repository Manager, Central Management Console.

Silicon Valley Bank Santa Clara CA Oct 2015 – Dec. 2015

SAP ETL Data Services/Information Steward Architect & Lead Developer

Contact Hub CRM: Objective of this project was to determine master or golden record from customer data. BODS Match transform was used heavily, and Match review configuration feature of Information Steward also used extensively. Data Cleansed then created groups based on first name last name break key and match criteria for email, phone number, address, city, state and Post code. a) Delta for source data. b) Cleanse & standardized all data. c) Created match groups and filtered all groups where master record identified. d) Clerical review of Match groups in Information Steward. e) Filtered all groups where master record identified, f) Clerical review of Match groups in Information Steward g) Loaded all data with history (SCD2) to Target database. Completed match review process, Integrated Information steward 4.2 with result and managed groups and pushed the data back to BODS for processing. Incremental match processing. Address standardized and validated using Address directories. Configured email in Information steward (IS). Scheduled task for content type (address, name, phone, SSN etc.) data profiling in IS. Created several rules & Scorecards for all quality dimensions (i.e. Accuracy, Completeness, Conformity, and Uniqueness etc.). Created & published data cleansing solutions (DCS) using data cleansing advisor (in Information Steward) for content type data (person, email, phone, address etc.) Data cleansing solution used in Data Services workbench and deployed in data services repository/designer. Output of this used to find highly confident groups and suspects groups and unique rows. Match review was conjured in Information Steward for suspect groups so thru clerical review of them master record data can be prepared. Rows were moved out and move-in and for unmatched rows new groups were created. Created data cleansing rules based on data validation advisor.

Tools Used: IPS 4.1 SP5, SAP Business Objects Data Services (BODS) v4.2.5, Information Steward v4.2.5, Oracle 11g, MS Access, Excel as source and target, Toad, Store Procedures, views, sequences. Oracle Database 11g Enterprise Edition v11.2. CMC, CCM, Data Services Management Console, Designer, Repository Manager, Central Management Console.

Komatsu America Chicago July 2015 – Oct 2015

SAP ETL Data Services/Information Steward Architect & Lead Developer

IPS/BODS/Information Steward Deployment (Dev/QA/Prod), Distributed Landscape architecting, configuration, Deployment and Vendor Data Migration to SAP ECC using iDoc, RDS v3.4.2/BODS 4.2.5

Information Platform Services (IPS), SAP Business Objects Data Services (BODS), Information Steward (IS) architected & deployed successfully using four windows 2012 (R2) servers in each environment development, QA and in production. Performed detailed sizing for BODS/IS processing power. SAP vendor master (LFA1, LFB1, LFM1 etc.) data including purchasing Org & company code information data cleansed & successfully migrated back to SAP ECC using iDoc & LSMW. Used function ZINBOUND_STATUS_FOR_DI to get status of each iDoc processed on SAP ECC. Configured Partner profiling on SAP ECC side. Used SAP Rapid Deployment Solutions (RDS) package v3.4.2 which works with BODS 4.2.5.

Several issues resolved during the whole deployment. Trained client staff on BODS and Information Stewards. Configured Active Directory (AD)/ Single Sign On (SSO) authentication using CMC. Configured connections for Information Stewards for BAAN, SAP ECC & SQL Server using CMC and so many other tasks in the projects like users and groups creation and configured the repositories, so it won't ask password multiple times. created central & local repositories & registered them in CMC, fixed issues with job server not working from laptop etc. etc. Fixed issue related to dynamic ports as client security did not allow them then used fixed

ports. Configured RFC on **Management** console and resolved issue related to that. Developed, Configured, exported and imported rules in information, migrated to other environments and to BODS. iDoc partner configurations issue resolved. RFC configuration issues resolved. Downloaded media (software) from **SAP** marketplace. Issues resolved with BAAN vendor Master **data** (TTCCOM020220). Installed postal and eLot directories on 3 BODS job servers. In 3 environments. Created several profile tasks including Address, column, content, Dependency, Redundancy, Uniqueness etc. Created schedules for Profile and Rules tasks in CMC. Information Steward Connections configured in CMC for following i. For **data** Profiling, ii. For **data** that failed rules iii. For **Data** Review.

Created databases required for IPS, BODS & IS. Created IS repository and Job server dedicated to IS repository. Created ODBC's required for IPS (CMS & Audit) and BODS job servers to work. Configured failed database for Information Steward profiling. **Data cleansing** advisor: Setup, cleanse and match result. Scorecards: Configured for end users. Exported and imported projects and objects in Information Steward. Created and associated custom attributes. Configured match review configurations with best record strategy: a) Main Strategy b) 1st tie breaker strategy c) 2nd tie breaker strategy. Created Windows scripts (using al_rwjblauncher.exe) and configured with external scheduler Redwood to trigger & schedule BODS Jobs. Created scripts by exporting BODS jobs from .bat/.sh & .txt files using exec command. Created and executed LSMW workbench recordings to load master **data** to **SAP** ECC.

Identified, developed, created, tested, debugged, documented, and maintained **data quality** scorecards in **SAP** Information Steward as well as BODS **data** jobs that were used to create Stage tables.

Audited **data** in accordance with the Master **Data** Governance program that defines and monitors the process of creating, modifying, storing and deleting **data**. Developed and delivered **management** dashboards that describe the state of master **data quality** across the enterprise. Helped with developing new KPI's for business processes and **data** improvement.

Tools Used: IPS 4.1 SP5, **SAP** Business Objects **Data** Services (BODS) v4.2.5. Rapid Deployment Solutions (RDS) packages V3.42. iDoc CREMAS05, **Migration** Services application, ODP/Extractors, **SAP** Landscape Transformation Replication Server [LTRS] (SLT for ABAP/RFC and non-ABAP source **systems**) add on v2.0. **SAP** ECC, **SAP HANA** Studio V2.0.8, **SAP HANA** DB V1.00.82.00394270. Microsoft SQL Server 2012 v11.0.5058, Microsoft SQL Server 2008, Oracle 11g, Oracle 9i, MS Access, Excel as source and target.

Information Steward v4.2.5, Oracle, PL/SQL Developer, Store Procedures, views, sequences. Oracle Database 11g Enterprise Edition v11.2. SQL Server 2012, T-SQL, Stored Procedures. **SAP ERP** R/3 4.6/ 6.0. **SAP** ECC 6.0 (R701), **Data** Services Workbench, **Data** Services **Management** Console, Designer, Repository Manager, Central **Management** Console.

Heinz Pittsburgh Oct 2014 – July 2015

Global BI ETL and BOBJ/BODS Architect/**HANA** Modeler, **SAP Data** Services ETL Architect & Lead Developer for **Data** Warehouse for global **data**.

ARI Fleet Management Toronto Apr 2014 – Dec 2014

SAP Data Services Migration Lead Consultant, **Data** Governance/MDG Consultant, Architect & Lead Developer

L-3 Communications – Dallas & Crestview FL, Aug 2013 – Apr 2014

Legacy Data Migration Lead to ECC/CRM /**SAP Data** Services Senior Consultant/Architect

Covance – Indianapolis IN, Dec 2012 – Aug 2013

Data Warehouse Architect, **Data** Services ETL Architect, **Migration** Lead

Tools Experience Summary

Tools: **SAP** S/4 **Hana** 1909, 2021, 2022, **Migration** Cockpit, BODI/BODS/**Data** Services v4.3, SDI/SDQ, Information Steward, MDG.

Scheduling Tools: Tidal, Maestro, Appworx to schedule BODS jobs, AutoSys, UC4 V8 Scheduler, Redwood Scheduler

Database: **HANA**, Oracle, PL/SQL, MS-SQL SERVER T-SQL, Teradata, DB2

Data Modeling Tools: CA Erwin **Data** Modeler, ER Studio, Embarcadero, Toad **Data** Modeler Visio. Handling logical and physical **data** models. E-R Diagrams, Translating E-R **Data** objects into Relational Constructs, Resolving Relationships, normalizing a **Data** Model, Implementing a relational **Data** Model.

File Transmission and Encryption Utilities: TCP/IP, FTP, sFTP and PGP/GPG encryption, WS-FTP, Telnet

Source code management Tools: MS Team Foundation Server (TFS), MS Visual SourceSafe, CVS & Eclipse version control software., Perforce

Operating Systems: HP-UNIX, Windows, Linux, UNIX-AIX (Korn, C Shells), MS-DOS,

Education: Holds an Undergraduate degree (B.Sc.) in Science & Mathematics and master's degree in computer applications (MCA) from DAVV University Indore India.
