

Sr. Java Full Stack Developer

Name: Pranit Sureshbhai Chetta

Email:pranits3679@gmail.com

Linkedin: <https://www.linkedin.com/in/pranit-chetta-52336b23b/>

Summary:

- 11+ years of **experience** in **Java Full stack Developer**, **Software Development Life Cycle**, Object Oriented **programming**, developing and **testing** of Client/Server, Enterprise and **Web Applications** and Followed **Waterfall**, **Agile methodologies** like **Test Driven Development (TDD)**, **SCRUM**, and **Pair Programming**.
- Replicates and documents **software** defects using bug tracking tools and reports defects involving program functionality, output, online screen and content to **development** team using **Rally Agile** Management tool.
- Expertise in **design** and **development** of **web applications** using **JSP**, **JavaScript**, **HTML5**, **CSS3**, **JQUERY**, **AJAX**, **JSON**, **DOJO**, **XSL**, **XSLT**, **Node.JS**, **Angular.JS**, **Backbone.JS**, **require.js**, **bootstrap**, **ExtJS** and single page **applications** (SPA) by using **JavaScript MVC framework**, **Angular JS**. Experienced in Advanced **Java** concepts like **JDBC**, **Servlets** and **JSPs**.
- Designed & developed using **HTML5**, **CSS3**, **EXT JS**, **JavaScript**, **XML**, **AngularJS**, **NodeJS**, **JSP**, **JSON**, **Vue.js**, **JSF**, **J2EE** and **Ajax**.
- Extensive **experience** in designing **User Interface (UI)** **web applications** **HTML/HTML5**, **XML**, **DHTML** **CSS/CSS3**, **SASS**, **LESS**, **JavaScript**, **React JS**, **Redux**, **Flex**, **Angular JS (1.X)** **jQuery**, **JSON**, **Node.js**, **Ajax**, **JQUERY Bootstrap**.
- Hands on expertise in working with the **Java Script**, **prototype JS** and various **MVC JavaScript** frameworks **AngularJS**, **Backbone.js** and **Node.js**.
- Developed single page **applications** using **Angular 2/4/5/6/7/8/11/15/16**, **Typescript**, and **web pack**.
- **Experience** with **Angular 2/4/5/6/7/8/11/14/15/16** components, **Dependency Injection**, **Services**, **Routing**, **pipes**, **Animations**, **Forms**, **AOT**, **Lazy Loading** etc.
- Used **Node Package Manager (NPM)** to manage or install the **Node - JS** modules like **Webpack**, **Grunt**, **Gulp**, **Brower Sify**, **Express**, **underscore.js**, **require.js**, **crypto.js**, **mongoose**, and **mongo.js**. Proficient in using higher level style syntaxes, **LESS** and **SASS** for writing **CSS** styles Proficient in **Responsive Design** Layout **applications** using **Bootstrap** supporting multitude of browsers and **devices**. Used **JIRA** and **Rally** to Bug/Issue tracking and project management.
- **Implemented and managed webhooks** to facilitate real-time communication between microservices, improving system responsiveness and data synchronization.
- Implemented **Java8** features like **Lambda** expressions, **Streams**, **filters** and fetching documents from the **database**.
- Extensive involvement in Front-end **Web Application Development** involvement with innovations utilizing **HTML 5**, **CSS 3**, **jQuery**, **JavaScript**, **ReactJS**, **NodeJS**, **Angular**, **Bootstrap**, **VBScript**, **Perl**, **AJAX**.
- Worked on **MongoDB database** concepts such as **locking**, **transactions**, **indexes**, **Sharding**, **replication**, **schema design**.
- Developed dynamic **responsive Web** Application by integrating **Angular2** with **Bootstrap** which is further integrated with **Web Services** and **Vue.js**.
- Managed structured data that is designed to scale to a very large size across many commodity servers, with no single point of failure by using **Cassandra**. Knowledge **experience** with other **NoSQL Databases**.
- Experienced in developing **web applications** by implementing **Model View Control (MVC)** architecture using **JSP Servlets**, **J2EE Design Patterns**, **Struts**, **Spring Framework (Spring MVC/IOC/ORM/AOP/Security/Boot)**.
- Execute **SEO** content strategy that improves reach and keyword rank by developing valuable keyword-rich content
- Expertise in **AWS Cloud** administration and architecture, including **AWS IAM**, **EC2**, **VPC**, **S3**, **EBS**, **AMI**, **SNS**, **RDS**, **Cloud** Formation and **Cloud** Watch, focusing on high-availability and fault tolerance.
- Creating complex **JIRA** workflows including project workflows, custom fields, notification schemes, reports and dashboards in **JIRA**.
- Developed and deployed scalable **web applications** using the **MEAN** stack, ensuring **responsive** UI and efficient backend **services**.
- Expertise in creating **User** Controls, **Web** Forms and client-side validations using **JavaScript**, **jQuery** Validate and **Angular-JS**. Experienced in using **Backbone-JS** to connect the **API's** which enforces the communication to the server.
- **Experience** in **User Experience (UX)** **design** and **development**, **User** Interactive (UI) **Web** Pages and visually appealing **User** Interfaces using **HTML 5**, **CSS3**, **Bootstrap**, **SASS**, **JavaScript**, **JQuery**, **Vue.js**, **Angular.js**, **Angular 2/4**, **Typescript**, **Node.js** and **React.js**.

- Developed **web applications** running on NodeJS using the Express framework, Vue.js and Backbone.js with Mustache.js for front end MVC/templating.

Technical Skills:

Languages: C, C++, **Java** (1.7)/(1.8), **JavaScript** ES6, **SQL**, PL/SQL, UML2.0

Technologies: JSP2.1/2.0/1.2, Servlets 2.x/3.x, JavaBeans, JDBC, Struts2.x, Hibernate3.x/4.x, Spring3.0/4.0, **Web Services**, SOA, JMS2.0, and DOM Parsers, AJAX.

Web Technologies: **HTML5**, **CSS3**, LESS, SASS, Bootstrap-3, Object Oriented **JavaScript Programming**, PHP, **JSON**, SEO, Typescript, ES-5, jQuery, **Angular.js**, **React.js**, **Node.js**, **Backbone.js**, and **Express.js**.

Development Tools (IDEs): Eclipse, NetBeans, MS Visual Studio, Brackets

Web/Application Servers: Tomcat7.x, **Web** Logic 10.3/9.2/8.1/7.0, IBM WebSphere7.x/8. X, JBOSS

Database: Oracle 11g, **SQL** server 2008, MySQL, MongoDB, Cassandra

Platforms: Windows, UNIX, LINUX, MAC

Testing Tools: JUnit 4.x, TestNG, Karma, Jasmine, Mocha

Version Control: CVS, SVN, Rational Clear Case, **GIT** Hub

Methodologies: Agile Methodology, Waterfall model, Angular1/2

Build Tools& Cloud tech: Gradle, Maven, **Jenkins**, Gulp, Grunt, Docker, **AWS**

Project Management tool: Rally and Jira

Education Details:

Bachelors in Computer Engineering from Gujarat Technological University

May 2014

Masters in Computer Science from Oklahoma Christian University

Dec 2019

Professional Experience:

Client: Macys, GA

June 2024 to Present

Role: Java Full Stack Developer

Responsibilities:

- Sound Knowledge about the entire (SDLC) of the project right from the designing of the project till the implementation phase of the project. Expertise in using **CSS3**, **HTML5**, **React**, **TypeScript**, **ES6**, **JavaScript**, **JSON** and **jQuery** to create UI **web** pages.
- Involved in various phases of **Software Development Life Cycle (SDLC)** of the application. Developed **applications** using Angular12, Java8 and new features of **java (lambda expressions)**. Developed screens using **HTML5**, **CSS3**, SASS, **JavaScript**, jQuery and AJAX. Produced content pages with **CSS3** layout and style markup presentations and used **JavaScript** methods and properties. Used Enterprise built security wrapper to secure **REST** endpoints, using policies to provide secure access.
- Strong **programming** skills in designing and implementation of multi - tier **applications** using **web**-based technologies like Spring Boot.
- Strong knowledge and **experience** on Amazon **Web Services (AWS)** **Cloud services** like EC2, S3, EBS, RDS, VPC, and IAM
- Responsible for designing and developing Presentation layer (**User Interface**) using **HTML**, DHTML, JQuery plugins, Java script.
- Integrated Apache Karaf with enterprise systems (databases, messaging queues) using JDBC, JMS, and **REST services**.
- Automated Apache Karaf server configurations using Puppet/Ansible and monitored via JMX & Karaf WebConsole.
- Node.js, React.js/Redux, React Native, Bootstrap, Ember.js, **Responsive web design (RWD)**.
- I developed **Responsive** Single Page **Applications (SPA)** using REACT JS and Closely worked with Application using React.JS and Node.js libraries NPM, gulp directories to generate desired views and redux to root the URLs properly.
- Implemented retries, alerts (Slack/Email), and failure callbacks for fault-tolerant workflows.
- Managed workflows using different executors (Local, Celery, Kubernetes) for scalability.

- Configured Airflow RBAC (Role-Based Access Control) for multi-team environments.
- Expertise in modern **web** architecture using various advanced **JavaScript** frameworks and libraries like Angular.js, Node.js, React.js/Redux, React Native, Bootstrap, Ember.js, **Responsive web design** (RWD).
- Developed single page **applications** using Angular 12, Vue.js, Typescript, **web** pack and grunt.
- Developed **user interface** by using the **React JS**, Flux for SPA **development**, also used **react** forms for **data driven** form components and **React** router to define module level routing.
- **Experience** in **design** and developing Microservices leveraging MongoDB. Developed **services** to monitor housing loan/underwriting related information reports to managerial people.
- Used **ReactJS** to capture **user** actions and render the relevant action, as well as dynamically render the UI based on **user** actions. Utilized **Web** Sockets with **React** to maintain consistent and real-time state across users.
- **Experience** in developing Microservices using Spring Boot, Netflix OSS (Zuul, Eureka, Ribbon, Hystrix), Feign, Spring **Cloud** Server and followed domain driven **design**.
- Built dynamic, component-based Angular **applications** with reactive forms, **services**, and RxJS for real-time data handling.
- Designed **RESTful** APIs using Express.js and Node.js, integrating with MongoDB for seamless CRUD operations and data persistence.
- Developed the online **web** application using **HTML/CSS** & **JavaScript**, Angular.js /Angular4/5, Vue.js, Node.js, Spring Boot, Spring MVN and Bootstrap.
- Developed entire frontend and backend modules using Python on Django **Web** Framework, ensuring coherence and consistency across the entire application stack by leveraging Object-Relational **Mapping** (ORM) principles.
- Developed monitoring and notification tools using Python, enabling real-time monitoring of application performance and proactive issue resolution.
- Automated business workflows with Lambda triggers via S3, DynamoDB, and CloudWatch Events.
- Ensured cost-effective performance by optimizing Lambda cold start times and execution efficiency.
- Used AWS SAM (Serverless Application Model) and CloudFormation for infrastructure-as-code **deployment** of Lambda-based systems.
- Optimized RabbitMQ performance by **tuning prefetch count, consumer concurrency, and TTL settings**.
- Integrated RabbitMQ with **Spring Boot, Node.js, and Python** for real-time event processing.
- Implemented **Terraform state management** using remote backends (S3, Azure Blob) with state locking for **collaboration**.
- Utilized **Terraform Workspaces** to manage environment-specific configurations, improving **deployment** efficiency.
- Deployed OSGi **services** (Apache Karaf) to extend AEM's backend, integrating with Apache Sling for content rendering.
- Developed real-time data pipelines using Apache Flink for processing high-velocity streaming data from Kafka, Kinesis, or other sources.
- **Configured and secured webhook endpoints** using HMAC verification and token-based authentication to ensure trusted communication between systems.
- Configured and fine-tuned **Cassandra clusters** to handle high-throughput **applications**.
- Utilized **CQL (Cassandra Query Language)** for efficient querying and data retrieval.
- Designed and deployed enterprise-scale ontologies (OWL, RDF/S) to unify disparate data sources, improving **cross-system** interoperability by 40%.
- Engineered a knowledge graph (using GraphDB/Neo4j) with 10M+ triples, enabling complex semantic queries for business **analytics**.
- Automated ontology alignment across domains using NLP and graph embeddings, cutting manual **mapping** effort by 50%.
- Developed SHACL constraints and SPARQL-based validation rules, reducing data inconsistency errors by 25%.
- Optimized AEM + Apache Sling performance by offloading heavy processing to Apache Karaf-based microservices.
- Implemented **Adobe** Contact Management solutions within AEM, enabling customer data segmentation, tracking, and personalized marketing.
- Implemented **Splunk Search Processing Language (SPL) queries** to extract and visualize insights from log data.
- Integrated Splunk with **microservices, Kubernetes, and cloud platforms (AWS, Azure)** for centralized logging and monitoring.
- Implemented SonarQube for static code analysis, improving code **quality** and maintainability across projects.
- Integrated SonarQube with Jenkins, Azure DevOps, and GitHub Actions for automated CI/CD pipelines.
- Configured SonarQube **quality** gates to enforce coding standards and prevent **deployment** of low-**quality** code.
- Optimized SonarQube rules and profiles for Java, **JavaScript**, TypeScript, and other languages to match project requirements.
- Configured and optimized **Splunk indexing, parsing, and data ingestion pipelines** for real-time log analysis.
- Designed and implemented **NoSQL database schemas** using MongoDB to optimize data storage and retrieval.
- Developed **scalable and high-performance queries** using MongoDB aggregation framework.
- Familiarity with the latest **Java APIs** and libraries introduced in **Java 21** for improved functionality and performance.
- Integrated **Adobe** Contact Management with CRM systems (Salesforce, MS Dynamics) for unified customer profiles.
- Built content-driven **applications** on Apache Sling, utilizing its JCR-based (Jackrabbit/Oak) resource resolution and **RESTful** architecture.

- Developed Sling Models, servlets, and HTL (Sightly) components for dynamic **web** experiences in Apache Sling/AEM.
- Implemented stateful stream processing **applications** with Flink's keyed state and checkpoints for fault tolerance.
- Familiar with Redis Pub/Sub for real-time messaging and event-driven architectures.
- Used Redis Cluster and Sentinel for high availability, replication, and failover management.
- Designed and developed entire frontend and backend modules using Python on Django **Web** Framework, ensuring coherence and consistency across the entire application stack.
- Leveraged Python-based GUI components for frontend functionality, ensuring intuitive **user** interfaces and seamless **user** experiences.
- Involved in provisioning and Automation servers on Public **Cloud** like AWS and Kubernetes.
- Responsible for developing **User** Controls (.ascx), C#, JQuery which were commonly used for MSDN, TechNet **web** pages.

Environment: Angular 4.0, Node JS, Apache Karaf, Apache Sling, HTML5, Node.JS CSS3-SASS, Twitter Bootstrap4.0, ES6 **JavaScript**, React-Axios, AJAX HTTP Service, TypeScript, webhook, **Adobe** Contact Management Spring boot, Splunk, JPA, jQuery, OAuth2.0, Apache Kafka, Active MQ, Jenkins, Bamboo, Log4j, MY SQL, Terraform, Cassandra DB

Client: Morgan Stanley, GA

Aug 2022 to May 2024

Role: Java Full Stack Developer

Responsibilities:

- Sound Knowledge about the entire (SDLC) of the project right from the designing of the project till the implementation phase of the project. Expertise in using **CSS3, HTML5, React, TypeScript, ES6, JavaScript, JSON** and **jQuery** to create UI **web** pages.
- Involved in various phases of **Software Development Life Cycle (SDLC)** of the application. Developed **applications** using Angular2, Java8 and new features of **java (lambda expressions)**. Developed screens using **HTML5, CSS3, SASS, JavaScript, jQuery** and **AJAX**. Produced content pages with **CSS3** layout and style markup presentations and used **JavaScript** methods and properties. Used Enterprise built security wrapper to secure **REST** endpoints, using policies to provide secure access.
- Strong **programming** skills in designing and implementation of multi - tier **applications** using **web**-based technologies like Spring Boot.
- Strong knowledge and **experience** on Amazon **Web Services (AWS)** **Cloud services** like EC2, S3, EBS, RDS, VPC, and IAM
- Responsible for creating efficient **design** and developing **User** Interaction screens using **HTML, CSS3, Bootstrap, JavaScript, Angular 6/8(v8.2.14)/11(v11.2.14)/14(v14.3.0)/16(v16.2.12)** and **Node JS (v10.16.3)/Node JS (v20.11.1)**.
- Responsible for designing and developing Presentation layer (**User Interface**) using **HTML, DHTML, JQuery** plugins, **JavaScript**.
- Deployed and managed enterprise Java **applications** using Apache Karaf as an OSGi runtime, ensuring modularity and dynamic service management.
- Developed custom OSGi bundles and managed dependencies in Apache Karaf, leveraging its hot **deployment** and feature-based provisioning.
- Used Salesforce Workbench to perform bulk data operations (insert, update, delete) and troubleshoot data integrity issues, improving system accuracy by 20%.
- Expertise in modern **web** architecture using various advanced **JavaScript** frameworks and libraries like Angular.js, Node.js, React.js/Redux, React Native, Bootstrap, Ember.js, **Responsive web design (RWD)**.
- Expertise in modern **web** architecture using various advanced **JavaScript** frameworks and libraries like Angular.js, Node.js, React.js/Redux, React Native, Bootstrap, Ember.js, **Responsive web design (RWD)**.
- Developed single page **applications** using Angular 2, Vue.js, Typescript, **web** pack and grunt.
- Developed **user interface** by using the **React JS, Flux** for SPA **development**, also used **react** forms for **data driven** form components and **React** router to define module level routing.
- Monitored and managed RabbitMQ performance using **Prometheus, Grafana, and RabbitMQ Management Plugin**.
- The tech stack is **AngularJS, Express** and innovative server-side technologies like **Node.js, MongoDB (MEAN Stack)**.
- **Integrated third-party webhook providers** (e.g., Stripe, GitHub, Slack, Twilio) to automate workflows and trigger backend logic on external events.
- Identified and remediated code smells, vulnerabilities, and security risks using SonarQube reports.
- Integrated SonarLint with VS Code and IntelliJ for real-time linting and improved developer productivity.
- Utilized SonarQube **Web API** to automate report generation and dashboard updates.

- **Experience** in **design** and developing Microservices leveraging MongoDB. Developed **services** to monitor housing loan/underwriting related information reports to managerial people.
- Automated weekly data extracts using SOQL in Workbench, eliminating 8+ hours/month of manual Excel work.
- Used **ReactJS** to capture **user** actions and render the relevant action, as well as dynamically render the UI based on **user** actions. Utilized **Web** Sockets with **React** to maintain consistent and real-time state across users.
- **Experience** in developing Microservices using Spring Boot, Netflix OSS (Zuul, Eureka, Ribbon, Hystrix), Feign, Spring **Cloud** Server and followed domain driven **design**.
- Developed the online **web** application using **HTML/CSS** & **JavaScript**, Angular.js /Angular4/5, Vue.js, Node.js, Spring Boot, Spring MVN and Bootstrap.
- Optimized Apache Sling performance by implementing caching strategies and efficient JCR querying.
- Customized Apache Sling request processing using filters, servlets, and OSGi **services** for AEM integrations.
- Involved in provisioning and Automation servers on Public **Cloud** like AWS and Kubernetes.
- Responsible for developing **User** Controls (.ascx), C#, JQuery which were commonly used for MSDN, TechNet **web** pages.
- Implemented role-based access control and JWT authentication across Angular frontend and Node.js backend.
- Built a unified customer data platform using **Adobe** Contact Management, Apache Sling (JCR), and Apache Karaf (modular **services**).
- Developed AEM workflows and automation to sync **Adobe** Contact Management data with email campaigns (**Adobe** Campaign).
- Monitored and optimized **Cassandra performance** using tools like Prometheus and Grafana.
- Used AEM's ContextHub with **Adobe** Contact Management to deliver real-time personalized content based on **user** behavior.
- Implemented **Terraform state management** using remote backends (S3, Azure Blob) with state locking for **collaboration**.
- Deployed and managed RabbitMQ clusters in **Docker, Kubernetes, and cloud environments (AWS)** for high availability.
- Utilized **Terraform Workspaces** to manage environment-specific configurations, improving **deployment** efficiency.
- Set up Airflow logging (ELK stack) and monitoring (Grafana, Datadog) for job performance tracking.
- Built batch processing jobs using Flink's DataSet **API** for large-scale ETL operations.
- Applied event-time processing, watermarks, and windowing (tumbling, sliding, session) for aggregations.
- Skilled in Redis data structures (Strings, Hashes, Lists, Sets, Sorted Sets) for efficient data storage and retrieval.
- Strong knowledge of Redis persistence mechanisms (RDB snapshots, AOF logging) for data durability.
- Developed a front-end **mobile** application using React Native, Redux, Flex and **JavaScript**.
- I developed **Responsive** Single Page **Applications** (SPA) using REACT JS and Closely worked with Application using React.JS and Node.js libraries NPM, gulp directories to generate desired views and redux to root the URLs properly
- Involved to implement various client-side interfaces on the front end using **React.js** and used various predefined components from NPM and redux library and deployed application to **NGINX**.
- Created and managed JIRA templates and complex JIRA workflows including project workflows, screen schemes, permission scheme and notification schemes.
- Designed and deployed serverless microservices using AWS Lambda with Node.js, reducing infrastructure management overhead.
- Integrated Lambda functions with **API** Gateway for scalable, event-driven **RESTful** endpoints.
- Utilized AWS Lambda to handle backend logic for Angular **applications**, including data processing, file handling, and **API** calls.
- Integrated **RabbitMQ with Kafka** for hybrid event-driven architecture in large-scale **applications**.
- Utilized **RabbitMQ Management Plugin** to monitor queue performance, message rates, and system health.
- Involved in data modeling for **applications** on Cassandra and migrating databases from Oracle to Cassandra.
- **Experience** in Vue.JS for building apps and declarative templates with databinding, created some custom directives in the application.
- Set up **Splunk forwarders and indexers** for efficient log collection and distribution in large-scale systems.
- Integrated Splunk with **Jenkins, Kubernetes, and Prometheus** for DevOps monitoring and observability.
- Implemented **role-based access controls (RBAC)** to secure Splunk data and ensure **compliance**.
- **Experience** in using **Java 11** features such as Lambdas, Streams, Observables and Completable Futures etc.

- Familiarity with the latest **Java APIs** and libraries introduced in **Java 17** for improved functionality and performance.
- Developed Spring Boot, REST **API** end points implementing messaging queue for a supply chain delivery system and Used Spring Core annotation-based configuration for Dependency Injection.
- Developing **Web** Pages by using HTML5, CSS3, jQuery, **JavaScript** and working knowledge of Angular 2, bootstrap.js, Vue.js and React.js
- Developed **microservices** and created REST **APIs** using **Java Spring Boot framework**, and **Spring REST** implementation and used Maven as a build tool. Designed and documented **REST/HTTP APIs**, including **JSON data** formats and **API** versioning strategy. In - depth understanding of NoSQL High Availability strategies - rep location, sharding, and failover
- Developed **microservices** using **spring framework**, benefiting from auto-configuration using **spring-boot**, securing

Environment: Angular 4.0, Node JS, HTML5, Apache Karaf, Apache Sling, Node.JS CSS3-SASS, Twitter Bootstrap4.0, ES6 **JavaScript**, React-Axios, AJAX HTTP Service, TypeScript, Terraform, webhook, Splunk, **Adobe** Contact Managemen Spring boot, JPA, jQuery, OAuth2.0, Apache Kafka, Active MQ, Jenkins, Bamboo, Log4j, MY SQL, Cassandra DB

Client: Westat, MD

Jan 2020 to July 2022

Role: Java Full Stack Developer

Responsibilities:

- Responsible for defining, documenting and articulating functional scope. Involved in technical analysis, problem-solving, tracking and managing customer and product **integration** requirements in a multi-transactional fast paced environment.
- Estimating efforts and providing enterprise service consulting for the technologies to integrate variety of **applications**.
- Leading and supporting critical middleware projects involving **Cloud based SaaS - Web APIs, services, IIB and DataPower**.
- Developed micro **services** using spring boot
- Use VUE. JS to perfectly capable of powering sophisticated Single-Page **Applications** when used in combination with modern tooling and supporting libraries.
- Discover and registering existing/new **API's** to enhance business solutioning via readily accessible information.
- Coordinating end to end project delivery for customers from requirement gathering to prod release including its **support**.
- Skilled in Redis data structures (Strings, Hashes, Lists, Sets, Sorted Sets) for efficient data storage and retrieval.
- Strong knowledge of Redis persistence mechanisms (RDB snapshots, AOF logging) for data durability.
- Build scripts on AWS **cloud** for scheduling EC2 auto scaling load balancer with python sdk.
- Created and managed **cloud** VMs with AWS EC2 Command **line** clients and AWS management console.
- Extensively used JQuery as code behind for all teh webpages in MSDN and TechNet, and developed JQuery Model Popup's and dynamically generating teh **HTML** content based in teh response JSON Format data from WCF service call and appending into a **web** pages.
- Analyzed technical debt metrics using SonarQube and provided recommendations for refactoring.
- Rewrote existing Python/Django modules to deliver specific data formats.
- Developed the main application in Python/Django, leveraging technologies such as Tastypie, Backbone.js, and Celery.
- **Experience** in using React JS components, Forms, Events, Keys, Router, plus Redux, Animations and Flux concept.
- Developing the application from scratch using React Native and Redux.
- Comprehensive **experience** on variety of technologies - **IIB/WMB, DataPower, Akana, Axway(Cloud SaaS), putty(UNIX), RTC, MF copybooks, UC Build, UC Deploy, SCM Harvest repository, Ultra edit, Visio** etc.
- **Design** analysis and engagement towards interaction with diversified platform **applications** like Provider repository, **Membership, ICIS, Salesforce, Google API's, Cognos, IBM Watson, Mainframes, Heeter, SAS, BRE, Apttus, Oracle DB, and DataPower** etc. Responsible for delivering architecture guidelines for **web API's** and digital deliveries.
- Implemented modules into Node.js to integrate with designs and requirements and used Node.js for communication to the server through **RESTful API**.
- Added **user** validations and **user** permissions by using Node.js and built Node server using Node.js with Express.js to populate the data on the webpage through the **database**.
- Contributing in enhancing platform abilities to onboard newer **API** technologies like **Akana, Axway** etc for Product Methodology adaptation for better customer **experience**. Defined standard features for IBM **API** Connect SOA Gateway.

Environment: IBM **API** Connect, IBM DataPower, Apache Karaf, Terraform, IBM MQ, Node.JS, IBM **Integration** Bus, IBM WebSphere Fabric, CGI Rata base, HP Xstream, DB2, Harvest SCM, Urban Code, webhook, Splunk, SoapUI, Postman and RFHUtil

Client: Allstate, IL

May 2019 to Dec 2019

Role: Java Full Stack Developer

Responsibilities:

- Responsible for Building **applications** using **React.js** which allowed us to render pages on both the client and server using the same codebase. Responsible for **React** UI and architecture. Building components library, including Tree, Slide-View, and Table Grid. Used Babel as a trans piler, Webpack as the module bundler in **React.js** and **Redux**
- Integrated Redux **data** store allowing **React** components to have access to **data** resulting in highly maintainable code.
- Developed **REST Web Services** clients to consume those **Web Services** as well other enterprise wide **Web Services**
- Implemented **React.js** code to handle **cross browser compatibility** issues in Mozella, IE 7, 8, 9, Safari and FF. Used Babel plugin tool for conversion of ECMA versions to **support** all type of browsers. Developed the flux pattern by using redux **framework** as a core dependency. Developed both **Restful** and **SOAP web services** depending on the **design** need of the project.
- Used **Java-J2EE** patterns like Model View Controller (**MVC**), Business Delegate, **Data** Transfer Objects, **Data** Access Objects, factory patterns. Written optimized queries in the Mongo DB to increase the performance of the application.
- Designed and developed the End Points (Controllers), Business Layer, DAO Layer using **Hibernate** and **Spring** IOC (Dependency Injection). Migrated the **data** from Oracle **database** to the Mongo **database** using listeners and **Apache** Kafka.
- Extensively used **MVC**, Factory, Delegate and Singleton **design** patterns. Used **React-Router** to turn application into Single Page Application. Developed **SQL** Queries to fetch complex **data** from different tables in remote databases using joins.
- Used **Hibernate framework** for back-end **development** and **Spring** DI for middle layer **development**. Used **Spring** **MVC** Transaction Management and **Hibernate** cache concepts. Modified the **Spring** Controllers and **Services** classes to **support** the introduction of **spring framework**. Used **React-router** to route the pages on the client-side and built SPA
- Used **Apache** Kafka for reliable and asynchronous exchange of information between multiple business **applications**.
- Skilled in utilizing **Angular** 14 component-based architecture and features like modules, components, **services**, and directives to build modular and maintainable **applications**. Used props, states, keys, refs in **React.js** to build the UI components.
- Familiarity with the latest **Java APIs** and libraries introduced in **Java** 17 for improved functionality and performance.
- Used Maven as build and dependency management tool for creating EAR, WAR and JAR file to be deployed in application servers and integrated with **Jenkins**, and Bamboo. Good **experience** with XML Parsers & **Web Services**.
- **Experience** in end-to-end **development** and migrating the application to **Cloud** using the Amazon **web services** (**AWS**) availing **services** of **AWS** like EC2, Elastic Beanstalk, Elastic Search, **Cloud** Watch, **Cloud** Front, **Cloud** Formation, IAM, S3, RDS, Elastic ache, SNS, SQS, AMI and Dynamo DB. Using MDM created **user** stories for IT **development** and **support** effort
- Used **Apache** Spark jobs using Scala in **test** environment for faster **data** processing and Spark **SQL** for querying.
- Generated Use Case Diagrams, Class Diagrams and Sequence Diagrams with Business team using Rational Rose.
- Collaborated with performance **testing** teams to integrate Cucumber with performance **testing** tools for end-to-end performance and load **testing**. Integrated SEO strategy that helped the website reach top rank on **Google**

Environment: **JavaScript**, React JS-Redux, HTML5, CSS3-LESS, AJAX, Bootstrap, jQuery, Spring Security, Rabbit MQ, Spring Data, Spring Batch, Quartz Scheduler, Hibernate, Microservices, Terraform, Splunk, webhook, **Restful services**, Eclipse Java EE IDE, Jenkins, Spring **Cloud**

Client: Standalone It Solutions, India

May 2014 to July 2018

Role: Java/J2EE Developer

Responsibilities:

- Developed **Hibernate** DAO classes and with the **spring framework** manager classes retrieve and save the **data** from the **database**. Used **Spring** Batch to **design** lightweight and comprehensive solution to the **development** of batch **applications**.
- Used **spring framework** to achieve loose coupling between the layers thus moving towards **Service Oriented Architecture (SOA)** exposed through **Restful Services**. Used display tag to render large volumes of **data**. Bean, **HTML** and Logic tags are used to avoid **java** expressions. Worked with My Batis persistence **framework** at backend **programming**.
- Created and injected **spring services**, **spring** controllers and DAOs to achieve dependency injection and to wire objects of business classes. **Development** of **cloud** hosted **web applications** and **REST APIs** using **Spring Boot** with embedded Tomcat.
- Identified business requirements of the project. Used **CSS**, **HTML**, **Java** Script, jQuery, AJAX for creating interactive **web** Application. Involved in **development** of **Spring** DAO layer which invoked **database** queries.

- Wrote PL/SQL stored procedures, Prepared statement and used **API**. Involved in developing the **CSS** sheets for the UI Components. **Data** modeling and **development experience** in Cassandra or other NoSQL databases
- Involved in writing the exception and validation classes using Struts validation rules. Used **Web** Sphere Application Server for deploying various components of application. Involved in various phases of **Software Development Life Cycle (SDLC)**.
- Used **Spring** AOP for **cross** cutting concerns like logging, security and transaction management.
- Persistence layer was implemented using **Hibernate Framework**. Front - end is designed by using **HTML**, **CSS**, JSP, Servlets, JSTL, Ajax and Struts. Involved in developing the **CSS** sheets for the UI Components. Monitored the error logs using Log4J and fixing the problems. Used Log4j to capture the log that includes runtime exceptions and debug information.

Environment: Java, J2EE, Servlets, JSP, JDBC, JNDI, JAX-WS, **SOAP**, SOA, **HTML**, **CSS**- Saas, AJAX, Angular 1.6, **SOAP**, JAX-RS, Jersey, Swagger, Hibernate, Spring, Spring Batch, WSDL, Spring AOP, Oracle DB, Karma, Jasmine, Jenkins, AWS, JWT.\
