

PROFESSIONAL SUMMARY

- 9+ years of IT Industry Experience in Linux Administration, Configuration Management, Continuous Integration, Continuous Deployment, and Cloud Solution Architecture Implementation.
- Experience in core AWS services (S3, EC2, ELB, EBS, Route53, ECS, VPC, Auto scaling, etc.) and deployment services (Elastic Beanstalk, Ops Works, and Cloud Formation) and security practices (IAM, Cloud watch and Cloud trail).
- Experience working with Microsoft Azure (Azure Storage Service, SQL Databases, Logic Apps, App Services, Application Insights, Azure Key Vaults, Function App, Azure DevOps, DevOps Projects, and Service Fabric Clusters).
- Professional experience designing and deploying scalable, highly available, fault-tolerant infrastructure and application architecture on AWS Cloud.
- Ability to work closely with businesses to understand and incorporate non-functional requirements in the application architecture.
- Experience working with Dockers.
- Experience in deploying containers AWS ECS, and Azure Container Instances.
- Experience with Configuration Management tools such as Ansible.
- Architected and designed a Rapid deployment method using Ansible to auto-deploy servers as needed
- Built a new CI pipeline. Testing and deployment automation with Docker, Jenkins, and Ansible.
- Experience in Implementing Organization DevOps strategy in various environment of Linux and Windows servers along with adopting cloud strategies based on Amazon Web Services.
- Experience maintaining CI environments with build automation tools like Jenkins, Bamboo and TFS.
- Extensively used Jenkins to streamline CI/CD process, automated several Master-Slave configurations using temporary slaves.
- Experience in developing and implementing infrastructure as code, automated provisioning and configuring using Terraform and Ansible.
- Experience in DevOps Engineering in automating, building and deploying of code within different environments (Dev, SIT, UAT, Staging & Prod).
- Strong Experience in Amazon EC2 setting up instances, VPCs, and security groups.
- Experience in managing AWS VPC (Virtual Private Cloud) environment with around 200+ Linux and Ubuntu instances.
- Created functions and assigned roles in AWS Lambda to run python scripts, and AWS Lambda to perform event driven processing.
- Setting up databases in AWS using RDS, storage using S3 buckets and configuring instance backups to S3 bucket.
- Knowledge of databases like MySQL, Oracle 10g/11g, MSSQL, MongoDB, Dynamo DB.
- Experience as a Cloud DevOps Engineer working on AWS DevOps and Azure DevOps Services.
- Experience in Deploying with Tomcat, Web Server, Node Js, PHP.
- Experience setting up dash boards for tools monitoring using AppDynamics.

- Experience in deploying Azure Function App and Logic Apps.
- Worked in container-based technologies like **Dockers**, **Kubernetes**, and Open shift.
- Experience creating Azure **DevOps** Pipelines in ADO.
-

Skills Profile

- **Cloud Services:**
Amazon Web Services - EC2, S3, Route53, VPC, SNS, SQS, SWF, EMR, Redshift, DynamoDB, RDS, CloudFront, ELB, EBS, Elastic Cache, ECS, Lambda, **Cloud** Watch, CloudFormation, Glacier/Snowball etc.
Microsoft Azure - Azure Storage Service, SQL Databases, Logic Apps, App **Services**, Application Insights, Azure Key vaults, Function App, Azure **DevOps**, **DevOps** Projects, Service Fabric Clusters.
- **Automation Frameworks:** **Terraform** and **Ansible**.
- **Containers, Clusters:** Dockers, Kubernetes, Open shift.
- **Programming Languages:** C, BASH, C++, Python, shell scripting, YAML, Core Java.
- **Database Servers:** Dynamo DB, Oracle, MySQL, MS SQL.
- **Operation Systems:** Linux, Windows, ubuntu.
- **Web Servers:** Apache Tomcat

Professional Experience

Client: FM Global, PA

Jan 2023 – Till Now

Role: Sr. **DevOps Engineer**

Responsibilities:

- Experienced in working with version control **systems** like GIT and used Source code management client tools like GitBash, GitHub, GitLab.
- Worked in all areas of Azure **DevOps** setting up CI for new branches, build **automation**, plugin management and securing ADO and setting up private agent's configurations.
- Integrating various Version control tools, build tools, nexus and **deployment** methodologies (scripting) into Azure **DevOps** to create an end-to-end orchestration build cycles.
- Troubleshoot build issues in ADO, **performance** and generating metrics on master's **performance** along with jobs usage.
- Build out server **automation** with **Continuous Integration** - **Continuous Deployment** tools like **Jenkins**/Maven for **deployment** and build management system.
- Design, Develop build and packaging tools for **continuous integration** build and reporting. Automate the build and release cycles.
- Worked in team with developers, testers, leads, architects to reduce friction in code flow from the developers starting point to production system **deployment** by improvising and maintaining CICD processes.
- Created snapshots and **Amazon** Machine Images (AMI) of the instance for backup and created access Management (IAM) policies for delegated administration within AWS.
- Created a **Continuous Delivery** process to include support building of Docker Images and publish into a private docker trusted registry and Jfrog Artifactory.
- Managed and configured (**Amazon Web Services**) **cloud services** like EC2, S3bucket, **Security** groups, RDS, EBS, ELB, Auto - Scaling, AMI, Elastic search, IAM through AWS Console and API **Integration**.

- Skilled in **monitoring** servers using Nagios, **Cloud** watch and using ELK Stack, Elasticsearch, Kibana.
- Working with **development** and QA teams to design Ingestion Pipelines, **Integration** APIs, and provide Elasticsearch **tuning** based on our application needs.
- Worked with Kubernetes to manage Docker containers and Implemented CI/CD allowing for deploy to multiple client Kubernetes/AWS environments.
- Plans and configures the physical database environment. Evaluates and recommends the purchase and utilization of technologies such as DMBS, servers, extract and conditioning tools, metadata management, **security** tools and archival and recovery tools and data access.
- Reviews database design and **integration** of **systems**, and makes recommendations regarding enhancements and/or improvements.
- Experience in Site Reliability **Engineering** (SRE), Linux **architecture**, and PowerShell scripting for **automation**, incident management, **performance** optimization, and **infrastructure** reliability in **cloud** and **DevOps** environments.
- Experience in SSL/TLS certificate management.

Environment: Git, Gitlab, Azure **DevOps**, Maven, **Chef**, Tomcat, Redis and shell Scripts, json, UNIX, Python, AWS, ELK, Postgres, Newrelic, AppDynamics, Twistlock, Kubernetes, yaml, **Jenkins**, Azure, GitHub Actions.

Client: Caremore, NY

Mar 2021 – Dec 2022

Role : Sr. **DevOps Engineer**

Responsibilities:

- Manage all aspects of the end-to-end Build/Release/**Deployment** process for multi-Project.
- Manage/oversees multiple releases to Daily/weekly/bi-weekly/monthly on Azure **DevOps**.
- Implementing a **Continuous Delivery** framework using Azure **DevOps** in Windows & Linux environment.
- Experienced in implementing **Terraform** and Docker.
- Strong hands-on .NET application **development** using Azure **DevOps**.
- Experience in architecting hybrid solutions, **cloud integration** with on premise environment (Azure app service environment, express route).
- Experience working with MS technical stack and build **deployment automation**.
- Experience source management workflow and platforms such as Visual Studio Team **Services**, Git, or Bitbucket.
- Experience deploying **infrastructure** using **Amazon** ECS.
- Experience Deploying **infrastructure** using Azure Container Instances.
- Experience with Dockers and containers.
- Experience with the Windows Azure **cloud** platform (IaaS and PaaS) and Azure CLI.
- Experience with Azure PaaS, Storage, IaaS, Resource Groups, and other **services**.
- Experience on Microsoft Azure VM SQL service, Cosmos DB, **Cloud services**, service fabrics, storage, and others.
- Scripting (Python, Ruby, PowerShell) & trouble shooting.
- Implemented Branching strategies using Git
- Performed migration setup from SVN to Git using bit buckets.
- Installed and configured Nexus for artifacts repository. Published snapshot and release versioned artifacts into Nexus repository.
- Experience in deploying Azure Function App and Logic Apps.
- Experience creating Azure **DevOps** Pipelines in ADO.

- Experience in deploying Azure **Web Services** on both Linux and Windows Containers.
- Experience creating various resource groups along with storage accounts and Key vault.

Environment: Azure Resource Manager (ARM), Azure function Apps, Azure App **Services**, Service Fabric Clusters, Azure Container Instances, Azure VMs, Azure SQL Servers, Azure Key Vaults, Application Insights, Azure Logic Apps, Azure Storage **services**, **Network Security** Groups, Azure **DevOps** Service, Open Shift, ELK Stack, AWS Lambda, AWS **services**.

Client: Credit One Bank, NE

Jul 2019 – Feb 2021

Role: Sr. **DevOps Engineer**

Responsibilities:

- Experienced in working with version control **systems** like GIT and used Source code management client tools like GitBash, GitHub, GitLab.
- Worked in all areas of Azure **DevOps** setting up CI for new branches, build **automation**, plugin management and securing ADO and setting up private agent's configurations.
- Integrating various Version control tools, build tools, nexus and **deployment** methodologies (scripting) into Azure **DevOps** to create an end-to-end orchestration build cycles.
- Troubleshoot build issues in ADO, **performance** and generating metrics on master's **performance** along with jobs usage.
- Build out server **automation** with **Continuous Integration** - **Continuous Deployment** tools like **Jenkins**/Maven for **deployment** and build management system.
- Design, Develop build and packaging tools for **continuous integration** build and reporting.
- Automate the build and release cycles.
- Worked in team with developers, testers, leads, architects to reduce friction in code flow from the developers starting point to production system **deployment** by improvising and maintaining CICD processes.
- Created snapshots and **Amazon** Machine Images (AMI) of the instance for backup and created access Management (IAM) policies for delegated administration within AWS.
- Created a **Continuous Delivery** process to include support building of Docker Images and publish into a private docker trusted registry and Jfrog Artifactory.
- Managed and configured (**Amazon Web Services**) **cloud services** like EC2, S3bucket, **Security** groups, RDS, EBS, ELB, Auto - Scaling, AMI, Elastic search, IAM through AWS Console and API **Integration**.
- Skilled in **monitoring** servers using Nagios, **Cloud** watch and using ELK Stack, Elasticsearch, Kibana.
- Working with **development** and QA teams to design Ingestion Pipelines, **Integration** APIs, and provide Elasticsearch **tuning** based on our application needs.
- Worked with Kubernetes to manage Docker containers and Implemented CI/CD allowing for deploy to multiple client Kubernetes/AWS environments.
- Plans and configures the physical database environment. Evaluates and recommends the purchase and utilization of technologies such as DMBS, servers, extract and conditioning tools, metadata management, **security** tools and archival and recovery tools and data access.
- Reviews database design and **integration** of **systems** and makes recommendations regarding enhancements and/or improvements.

Environment: Git, Gitlab, Azure DevOps, Maven, Chef, Tomcat, Redis and shell Scripts, json, UNIX, Python, AWS, ELK, Postgres, Newrelic, AppDynamics, Twistlock, Kubernetes, yaml, Jenkins, Azure, GitHub Actions.

Client: Marolix Technology Sol.Hyderabad, India

May 2015 – Mar 2019

Role: Sr. DevOps Engineer

Responsibilities:

- Implemented CI CD process for daily deployment and for creating end to end build and deployment process using Jenkins.
- Support application deployments, building new systems and upgrading and patching existing ones through DevOps methodologies.
- Written Ansible modules to Create, terminate, start and stop AWS EC2 instances.
- Written Ansible playbooks to install Grafana and tested using Kitchen CI before pushing into different environments.
- Written Ansible playbooks for deployment of WAR, JAR, and EAR files across all the environments & for restarting applications.
- Successfully configured Ansible control server (Linux) to manage Windows servers and installed application using Ansible.
- Experience working with AWS container service (ECS) and Azure container services.
- Wrote Ansible playbook to installed Splunk forwarders.
- Wrote Terraform Scripts to create infrastructure for App Dynamics.
- Build servers in cloud based and physical infrastructure.
- Develop CI/CD system with Jenkins on Google's Kubernetes container environment, utilizing Kubernetes and Docker for the runtime environment for the CI/CD system to build and test and deploy.
- Managing the Open shift cluster that includes scaling up and down the AWS app nodes.
- Have knowledge on partition of Kafka messages and setting up the replication factors in Kafka Cluster.
- the runtime environment for the CI/CD systems to build and test and deploy
- Deployed and maintained Chef role-based application servers, including Apache, Resin and Tomcat.
- Developed and supported key pieces of the company's AWS cloud infrastructure. Built and managed a large deployment of Ubuntu Linux instances systems with Op's code Chef.
- Designed highly available, cost effective and fault tolerant systems using multiple EC2 instances, Auto Scaling, Elastic Load Balance and AMIs.
- Used IAM to create new accounts, roles and groups and polices and developed critical modules like generating amazon resource numbers and integration points with S3, Dynamo DB, RDS, Lambda and SQS Queue.
- Install, configure, and maintain ELK stack systems.

Environment: AWS (IAM, EC2, S3, EBS, Glacier, ELB, Cloud Formation, AWS Lambda, Cloud Watch, Cloud Trail, SNS, SQS, Route53, RDS), Git, Chef, Splunk, Bash, Shell, Dynamo DB, RHEL 4/5/6, CentOS, Apache Tomcat.

Projects:

DevSecOps Implementation:

Successfully implemented **DevSecOps** practices by integrating **SAST (Static Application Security Testing)** tools for automated security scans, ensuring vulnerability detection and compliance during development cycles.

Online Resume Hosting:

Designed and deployed a professional online resume using **AWS S3**, **Route 53**, **CloudFront**, and **ACM** for secure, highly available, and globally distributed access.

Single Sign-On Integration:

Integrated **Keycloak** for SSO (Single Sign-On) with various tools such as **Jenkins**, **Semaphore**, **DefectDojo**, and **Kiali**, significantly enhancing security and user management across the DevOps toolchain.

Artifact Management:

Automated artifact build and deployment workflows by utilizing **JFrog** and **Amazon ECR** repositories, enabling efficient and secure container image management.

CI/CD Pipelines:

Developed robust **Jenkins** pipelines and **Ansible** playbooks to streamline automated application deployments while enhancing security and operational efficiency.

Certificate :

1. **Amazon** web service solution architect associate
2. Azure fundamentals Az 900
