Mobile: 612 229 9492 || Email: algajallow@gmail.com

PROFESSIONAL SUMMARY

Results-driven System **Engineer** with 9+ years of experience in **cloud** computing, **DevOps**, and Linux system administration. Proficiency in AWS, Azure, Docker and container orchestration management like Kubernetes. Skilled in **automation infrastructure**, scripting languages, and CI/CD pipelines. Proven expertise in managing and **troubleshooting** Linux **systems**, including server builds, migrations, and deployments. Strong understanding of the SDLC, IP networking, **security**, and vulnerability management. Proficient in Microsoft tools and experienced in working in an **Agile** environment.

PROFESSIONAL EXPERIENCE

Cloud Infrastructure Engineer • PERATON/USPS • April 2022 – Present

- Design and implemented end-to-end **infrastructure** solutions on **Cloud** platforms for more than 300 applications, ensuring optimal **performance**, **scalability**, and resilience.
- Implemented **Infrastructure** as Code (IaC) using **Terraform** to automate the **deployment** and management of AWS resources. Utilized **Terraform** to build various **infrastructure** modules such as VPCs, RDS instances, EC2 instances, S3 buckets, load balancers (ALB/NLB), auto-scaling configurations (ASG), Route53, SSL certificates, Secrets, flow logs and more.
- Oversaw the networking components, such as VPCs, subnets, route tables, internet gateways and **security** groups, ensuring isolation, **scalability**, and secure **communication** across **services**.
- Proficiently managed EC2 instances, ensuring optimal compute configuration, **performance tuning**, and automated backups.
- Orchestrated efficient storage solutions using AWS S3, integrating lifecycle policies, multi-region replication, and server-side encryption.
- Utilized Git and GitHub for version control, facilitating collaborative **development** and ensuring code integrity across the team.
- Provisioned and orchestrated Kubernetes (EKS) clusters, managing self-managed nodes and deploying containerized applications for **scalability** and resilience.
- Developed docker files to containerize various applications, ensuring a consistent and isolated environment for each application. Demonstrated proficiency in building, managing, and optimizing Docker containers, and effectively pushing them to AWS Elastic Container

Registry (ECR) for secure storage and version control of container images. This streamlined the **deployment** process and enhanced the reliability of application **delivery**.

- Implemented and maintained robust CI/CD pipelines using **Jenkins**, automating the end-to-end build, test, and **deployment** processes, resulting in 30% faster release cycles and reduced manual errors.
- Compliance with **agile development methodology** and the SDLC.
- Implemented and managed AWS CloudWatch for comprehensive **monitoring** and observability, leading to enhanced application **performance**, proactive issue resolution, and optimized resource utilization in a dynamic **cloud** environment.
- Utilized Jira for effective project management, tracking tasks, issues, and facilitating **collaboration** among team members.
- Managed and maintained Linux servers in AWS, ensuring optimal **performance**, **security**, and reliability for mission-critical applications, and consistently demonstrated the ability to troubleshoot and resolve complex server-related issues.
- Administered IAM roles, policies, and groups to ensure secure and least privileged access to AWS **services** for users and applications.
- Collaborated with **cross-functional** teams to understand application requirements, offering AWS solutions that align with business goals

Cloud Engineer • **COSTCO** • Jan 2024 – Jun 2024

- Team leader of the build and Application migration project
- Utilize OpenText Document for tasks management and reports
- Server migration from on premise to COSTCO Datacenter
- Migrate Databases and Pharmacy application (EPS)
- Deploy applications using CI/CD pipelines and GitHub repositories
- Create and manage scripts and **Ansible** playbooks to facilitate migration tasks
- Communicate and collaborate with COSTCO pharmacy teams for validation
- Team sprint planning on Service Now/Jira
- Manage Linux MVs on VMware/vCenter
- Create and track process documents using Confluence
- Constant planning, **communication** and **collaboration** with multiple ops teams using Microsoft 360 tools

Cloud Engineer • **Boston Scientific** • June 2019 – Nov 2021

- Architect and deploy secure and scalable **cloud** environments by designing VPCs, subnets, route tables, and internet gateways to meet diverse business requirements.
- Enhance system **performance** and **scalability** through the strategic use of Elastic Load Balancing, Auto Scaling, EC2, and RDS **services**.

- Managed cost-effective and reliable storage solutions, including S3 buckets and EBS volumes, to support dynamic data needs.
- Implemented advanced **security** protocols using IAM roles, **security** groups, and NACLs to ensure compliance with industry standards and safeguard **cloud** environments.
- Monitor and optimized **infrastructure performance** using tools such as **Amazon** CloudWatch and AWS CloudTrail for actionable insights.
- Designed and implemented CI/CD pipelines with tools like GitHub, **Jenkins**, SonarQube, Prometheus, and Nexus to streamline deployments and enforce quality standards.
- Automated **infrastructure** provisioning with **Terraform**, ensuring consistency, reducing errors, and accelerating **deployment** processes.
- Streamlined application **delivery** using Docker to enable efficient containerization and **scalability** of applications.
- Administered Linux-based **systems** (RHEL, Ubuntu, SUSE) to ensure stability, **security**, and optimal **performance** in **cloud**-based environments.
- Configured and optimized **web** servers, including Apache and Nginx, and managed secure **communication** via SSH.
- Enhanced system reliability and efficiency through **troubleshooting**, log analysis, and **automation** with Bash scripting

SYSTEM ADMIN • Placon • DEC 2016 – MAY 2019

- Install, configure, and manage Linux Red Hat Enterprise and SUSE operating **systems**.
- Linux System upgrades and migrations using **Ansible**, YAML codes and VMware/vSphere.
- File system administration using LMV, NFS.
- **Automation skills** utilizing scripting language like bash and shell.
- Connected to single sign on LDAP server and configured auto-mount.
- Create projects and incident tickets using Service Now
- Leading the build of new **infrastructure** for new apps, OS Hardening and Patching.
- Building Server using the advance tools such as **Ansible** tower, and troubleshoot TCP/IP, DHCP, DNS, NFS, KVM, **web** servers in a multi-platform.
- Monitored log management on UNIX/Linux servers, including processes, crash and swap management with password recovery and performing **tuning**.
- Troubleshoot RHEL and SUSE issues in hardware and **software** related and configuration issues.
- Participating in root-cause analysis of recurring issues, system backup and **security** setup.
- provide 24/7 support in production testing and **development** environments.

Education

Bachelor's degree in **software engineering**

December 2023 • Saint **Cloud** State University

Associates of Applied **Science .NET Programming**

December 2019 • Hennepin Technical College

Bachelor's degree of Science – Economic

November 2014 • Assane Seck University

Clearance

- Public trust (Eligible for Secret Clearance)

Algassimou Diallo

- Brooklyn Park, MN, US
