

Christina Smith

Security Engineer/ Project Manager

Atlanta, Ga | csworkbook12@gmail.com | 470.840.6228

EDUCATION

Georgia Southern University

BS **Management** and Modern Languages

Tennessee State University

MS **Computer** Science

Certifications: Cybersecurity Analyst sprint -Clicked/IBM

Creating & Implementing Cybersecurity Program -Clicked/IBM

IBM Certification in Cybersecurity (w/Penetration Testing)

Statesboro, GA

(2015)

Nashville, TN

(2018-)

(12//2022)

(08/2023)

(06/2024)

SKILLS & INTERESTS

- **Microsoft Office** Suite (365, Azure AD, Entra ID)
- Linux
- OpenShift
- CyberArk
- Strong written and verbal skills
- Malware Analysis
- FedRAMP
- PCI/GDPR
- AWS (IAM, S3, KMS, Lambda)
- Threat Modeling

- JavaScript, Python, HTML, C++, Powershell, Ruby, .NET, bash
- SQL (Mode, Snowflake)
- MDM (**mobile** device mgmt)
- Agile & Waterfall
- Scrum / Kanban
- MSFT Entra ID (EDR, XDR)
- Oracle – Cloud **Management**/CPQ
- SDLC
- Scheduling and Coordinating
- MITRE ATT&CK
- SOAP/REST

Other Languages: **Spanish**

WORK EXPERIENCE:

Security Engineer/ Project Manager

Atlanta, Ga

CS Solutions

Feb 2018-Oct 2024

- Understanding of network protocols and how they relate; such as knowing the need of DNS to find a website's IP address before using HTTP to access **it's** content, both HTTP and DNS operate on top of TCP/IP protocol suite.
- Working knowledge of adversary methodologies such as TTPs, using Threat Actor Profiling.
- Managing CASB (Cloud Access Security Broker) for Data loss prevention and to assess risk in order identify and prevent threats while also adhering to compliance standards such as HIPAA ,PCI, and HITRUS
- Implemented identity governance using Saviynt in Oracle cloud environment, integrating with operational workflows to streamline access **management**, automate compliance processes, and ensure seamless system performance.
- Creating rules for incident investigation by defining conditions based on log events and assigning alerts for suspicious activity.
- Identifying abnormal user/device behavior by establishing a baseline that allows AI/ machine learning overtime; utilizing user error behavior analytics (UEBA) that enable logging activity to find potential threats to be identified before they escalate
- the application is vulnerable to database access. And Manual code auditing to look for issues such as input validation and authentication flaws. to identify and remediate multiple security issues, enhancing the overall security posture of the application before its launch.
- Using the DevSecOps approach to aid in consolidation of DevSecOps tools like GitLab/GitHub, SonarQube, Jenkins, Selenium, Ansible, Docker, Kubernetes, and containerization.
- Preventing theft and achieving compliance using Privilege Access **Management** (PAM) by administering privileges to defined types of users. Identity Access **Management** (IAM) to secure access to assets and company resources with MFA & 2FA

- Utilizing static analysis tools and flaw triage such as HP Fortify, IBM Rational, Veracode or Coverity, FindBugs, FindSecurityBugs, Brakeman and Open Source scanning tools like Sonatype CLM to deliver clean code
- Improving business processes through an **IT Service management** (ITSM) such as ServiceNOW to enable communication between customers and providers
- Creating incident response plan to be proactive with log analysis and documentation for potential audits
- Managing CASB (Cloud Access Security Broker) for Data loss prevention and to assess risk in order identify and prevent threats while also adhering to compliance standards such as HIPAA and PCI
- Utilizing DLP and IOT/OT tools to track and manage data and **hardware** devices in order to control processes in events in an organization, protecting cyber infrastructure and assets.
- Managed and operated (SIEM) tools such as Splunk, Qualys, and ArcSight to analyze different volumes of data within the applications of the organization to create a strategy in order to block attacks and encrypt data.
- Using Sentinel one and CrowdStrike Falcon to mitigate threats in real time, for behavioral analysis, such as IOA. To manage vulnerability assessments prioritizing risks.
- Utilizing GRC (governance, risk, compliance) to strategize structured approach for business objectives and lower security risks, reduce costs, and **help** the organization make informed decisions.
- Conducting Vulnerability Scans to search and report all potential threats and assigning risk level.
- SOX/ICoFR -helping organizations navigate the complex landscape of financial compliance, from initial implementation to ongoing monitoring and improvement. **It** emphasizes the importance of transparency, accuracy, and accountability in financial reporting.
- Monitoring API/web application and analyzing the traffic, behavior, and interactions within APIs and web applications to identify and respond to security threats or vulnerabilities through using network protocols, firewalls, VPNs, IDS/IPS, SIEM, DLP, PAM, and IAM
 - Installing new security systems under organization controls and compliance by Interpret Risk **Management** frameworks catered to the size and circumstance of the networks.
 - Lead the **software** life cycle of applications and **software** through research and **development**
 - Operating applications through the **software development** life cycle with user acceptance testing through the upgrade process using templates.
 - Make BI tools accessible to Stakeholders and Product Owners for self-**service** and easy access to data
 - Define and **support** user and digital principles for digital workplace by analyzing assets and data, key performance indicators (KPI's)
 - Experienced and Staying up to date with frameworks such as ISO/IEC 27001 and 27002 NIST 800-53 (Rev. 4 & Rev. 5) , CSF, and RMF, & COBIT
 - Prioritizing and supervision of cross functional backlog for digital workplace capacities by iterative planning and delivery. Providing stakeholders with demonstrations with user-friendly reports & visuals that are scalable and transferable to receive updates and estimation of completion.
 - Collaborating to manage workflow of said backlog, using kanban to achieve tasks and deliverables
 - SMART insights data requirements for cross-functional teams
 - Migration of infrastructure, data/database and applications out of legacy data centers to cloud and hybrid environments (public and private)
 - Constructed remediation plan for any risks and vulnerabilities, by prioritizing to get the most ROI and target areas with the high-risk level and severity
 - Gathers metrics and mitigates risks, using SAP CRM metrics for asset performance and generate a greater ROI
 - Developing **customer** outreach by digital storytelling through C-Level presentations
 - Through conducted review create Business Continuity Plan (BCP) or Disaster Recovery depending what the situation calls for.
 - Planning and creating strategies that are scalable and transferable through vulnerability assessments
 - Maintain documentation and oversee metrics of internal and external bases.

FEDEX Services (Contract)

May 2019- Sept 2019

- Designed and led Web **Development** for Self-**Service** Portal for interior design, infrastructure, and technology for rooms for FedEx “Hoteling”
- Worked with marketing and facilities alongside with Samsung and Cisco to represent their products in the most appealing way while still abiding FedEx’s guidelines.
- Managed workflow and tracked tasks performed or temporarily halted due to an issue are simplified
- Utilized SAP to manage business operations, digital transformation
- Communicated and collaborated with cross-functional teams in order to identify the best approach to generating a greater ROI. -
- Analyzed user requirements, procedures and problems to automate or improve existing systems
- Written Oracle PL/SQL stored procedures
- Applied modern technology such as Angular JS to assist with **development** of **computer** programs and applications for real-world FedEx business initiatives.

Meharry Medical College

Business Intelligence Analyst

Nashville, TN

Oct 2016- July2018

- Met with departments and shareholders within the Institution to coordinate Functional ways for them to access needed data and reduce cost.
- Maintain physical historical documentation and philanthropy.
- Document, scan, and mine physical and digital financial and relative alumni and donor data
- Check-on past Donor’s in preparation for events and to validate financial gifts.
- Provided ad hoc reports/ analyses to division **management** stakeholders
- Experience using and administering data visualization w/ Raiser’s Edge

Amazon

Area Manager

Nashville, TN

Feb 2016- Sept 2016

- Managed over 100 direct reports & provided feedback and opportunities for growth Continuous Improvement practices in the **office** with daily **management** sessions or regularly scheduled lean-focused meeting
- Keep the backlog controlled while overseeing the freight and volume of the trucks coming in.
- Improved quality scores by improving inbound process through Test-Driven **Development**
- Created, managed, and supported recognition and communication programs
- Focused on safety and quality to enhance the overall **customer** experience
