

Daniel Marzan

430 N 24th Ave Hollywood, FL 33020 | (305) 562-1065

daniel@soliddataconsulting.com | www.linkedin.com/in/danielmarzan

Experienced full stack **software engineer** with expertise in **software architecture** and the full **software** development life cycle. Proven track record in developing **business** solutions using C# .Net, Nodejs, AWS serverless, UI/UX, **Vue**, Angular, Gen AI and open-source technologies. Seeking a challenging technical role to leverage my technical skills, teamwork, and organizational abilities in developing quality **enterprise software** while mentoring developers to achieve excellence and meet deadlines.

TECHNICAL SKILLS

- **Languages & Frameworks:** .Net Core C#, TPL, Entity Framework, Dapper, **Python**, LangChain, Html 5, ASP.NET MVC, REST, Nodejs.
- **UI/UX:** HTML 5, **Javascript**, Typescript, Angular, **Vue**, Quasar, Tailwind CSS, Bootstrap.js, SPA, PWA.
- **Cloud:** AWS Serverless framework, CloudFormation, Cognito, Lambda, AppSync: managed GraphQL, **Api** Gateway, AWS ECS/ECR, CloudWatch, Firehose. GCP
- **AI:** Gen AI, RAG, LangChain, LLM, OpenAI ChatGPT, GCP Vertex AI, Vector Store: Neo4j, Pinecone
- **Data Bases & Event Brokers:** MongoDB, SQL Server, PostgreSQL, Influx DB, RabbitMQ, DynamoDB.
- **Security:** OAuth, JWT, AWS Cognito, Auth0.
- **Search engines:** Algolia, Elastic **Search**, Splunk.
- **Design Patterns:** Domain Driven **Design**, GOF, SOLID principles, MVVM, MVC.
- **Methodologies & Modeling Tools:** OOP, UML, Plant-UML, Agile: Scrum/Kanban.
- **Operating Systems:** **Windows**, Linux, Mac OS X.
- **Source Control:** Git, Smart Git, GitHub, Bitbucket.
- **IDE & Tools:** Visual Studio/**Code**, Copilot, JetBrains, Atlassian JIRA.
- **CI/CD:** GitHub Actions, Docker Containers, Kubernetes, Team City.

SUMMARY OF QUALIFICATIONS

- Experienced in Gen AI, Retrieval Augmented Generation (RAG), knowledge graph building from text sources using LangChain and multi agent systems for natural language answers to queries against vector **data** bases like Neo4j.
- Expert developing full stack AWS solutions using **Vue**, Amplify, serverless framework, **JavaScript**/Typescript and Nodejs.
- Expert developing full stack .Net solutions using Angular, C#, **Web API**, **Microsoft** Technologies and open-source frameworks.
- Possess expertise in **Software Architecture**, **enterprise web** service development, Event Driven **Architecture**, SOA, SaaS.
- Extensive background in full development life cycle, including requirement definition, prototyping, **software design**, implementation, testing and troubleshooting.
- Experienced applying Test Driven **Design**, Domain Driven Design, UML **design** and collaboration in agile development environments.
- Very strong communication, organizational and analytical skills.
- Skilled researching, evaluating, and integrating open-source frameworks.
- Solid management skills and proficiency leading and mentoring individuals while developing strong team environment.

PROFESSIONAL EXPERIENCE

July 2021 – present

Solid Data Consulting

Sr Software Engineer Consultant

Charles Schwab www.schwab.com

Designed and developed several features of Schwab's Personalized Direct Indexing platform <https://www.schwab.com/direct-indexing> beginning as an organization startup to a mature product. This platform, currently used by portfolio managers to optimize any account portfolio to match major market indexes like S1K along with tax-loss harvesting, is currently very profitable holding large assets in total. Built on a simple multi-tier architecture, hosted in AWS.

- Developed several complex middleware services and trading workflows applying domain driven design. For example, workflow concepts like approving trades and optimize are encapsulated within the context, entities and domain services that best describe their state and validation. These REST API services built with Web Api supported all UI web components in Angular i.e. display market data, account details data, data filtration, portfolio optimization and trades, integration with optimization modules and third-party services.
- Introduced OAuth security and middleware for endpoints security.
- Proposed several data loading optimization techniques that reduce large data retrieval to milliseconds while keeping existing workflows and filtration mechanisms.
- Built data aggregation services to support efficient workflow executions.
- Conducted interviews, and helped the team stay on track each 2 weeks sprint, in unity and workload.
- Collaborated with BA, product owners and team on every sprint planning and refining session. Each meeting I analyzed requirements for functionality and architecture.
- Evaluated new technologies and frameworks, seeking always the path of simplicity, avoiding using frameworks or technologies that are either expensive or would introduce more complexity.
- Organized and implemented the project in a cohesive multi-tier architecture using industry standards like 12 factors and SOLID principles.
- Leveraged .Net, C# data structures to create algorithms that would execute in milliseconds or seconds when processing large data, even parallelism when necessary.
- All functionalities are covered by unit and integration tests.
- Performed query tuning with schema, index and table partition analysis to reduce query execution to milliseconds or seconds.

Technologies: C#, Net Core, Web API, EF, SQL Server, Angular, Typescript, HTML, CSS, Web API, OAuth 2.0, AWS ECS, RDS, Docker, Linux, Git, CI/CD: GitHub Action, Bitbucket, Splunk.

Social media web app

Created from scratch a social media pwa web app geared to people seeking to connect with others and share information related to any published book, on any format, including articles on the internet. This app is customizable to serve as a RAG search engine that can aggregate information from various sources using both vector store and knowledge graph, i.e. law firms can upload their cases, and the engine will answer queries in natural language from these sources only. Built using Vue 3 and Quasar with modern UI/UX designs plus material components and AWS Serverless with AppSync, DynamoDB and a graph database for backend. Features include:

- Search people and posts, direct messages, profile, followers and following lists, timeline and more.
- Ask search: RAG chain using LangChain, in Python 3, agents powered by Open AI using Neo4j graph database with text embedding for vector search capabilities and graph algorithms like community detection to provide answers nodes related in the same community. Retrieving relevant data based on the node and relationships properties including generating cypher queries when indicated by the agent prompt, to provide answers exclusively from stored data rather than from LLM's own sources, linking back to the original source.
- Authentication and Authorization using AWS Amplify and Cognito.
- Service to extract content via GCP Document AI OCR book pdfs to convert to LLM embedding used in vector search.
- Algorithms written in python to enhance and preprocess texts to effectively build a knowledge graph in Neo4j using Gen AI prompt engineering to extract structured data from raw text.
- Full text search for people and posts with Algolia.
- Capture UI interactions via AWS Firehose for UI/UX analysis.
- Full serverless services and workflows coverage with e2e tests.

Technologies: AWS SDK, Serverless framework 3.0, CloudFormation, Typescript/JavaScript, Nodejs, AWS AppSync, Lambda, DynamoDB, Cognito, Firehose, Amplify, Event Stream, Neo4j, Algolia, Lumigo.io, Html 5, Vue 3 + Vite, Quasar, Tailwinds 4.0, Open AI gpt-4o, LangChain, Python 3, GCP Document AI, Git, CI/CD: GitHub Action.

Georgia Pacific www.gp.com

Designed and developed several features for Georgia Pacific's main e-commerce trading platform Wood Duck, used to by brokers trading wood related products across the globe, which supports several thousand transactions per second daily worth millions of dollars.

- Implemented and maintained several very complex middleware services in .Net, C#, Web Api, Dapper, SQL Server, to serve workflows like integrations with Sales Force CRM system, inventory updates, order fulfillment and internal accounting.
- Build and maintained UI components.

Technologies: C#, Net, SQL, Dapper, Server, JavaScript, HTML, CSS, Web API, OAuth 2.0, Azure, Git.

July 2014 – July 2021

UKG/Ultimate Software www.ukg.com

Lead Software Engineer

Banking

Designed, refactored, and developed several features for the legacy banking engine that handled the payroll tax payments for all tax agencies: local, state, and federal; starting from the payment aggregation based on a large, and cohesive set of rules, to the delivery of payments to the tax collecting agencies.

- Designed and implemented middleware services that incrementally replaced complex and untestable sql scripts that handled many business rules into a domain and event driven architecture that allowed to scale the payroll tax processes.
- Collaborated with engineers, tech leads across teams and business analysts on the design of the road map and strategies to approach incremental refactoring without affecting existing legacy processes.
- Resolved and triaged several performance bottlenecks that hindered large scale tax payment processes, using a combination of outbox patterns to partially make substages of the monolithic processes to become transactional, warranty consistency and avoid data loss.
- Separated large UI driven transaction into event driven operations to increase scalability.
- Implemented several UI components in ASP.Net
- Designed and implemented optimized TPL processes and libraries for large in-memory transactions.
- Regularly contributed to the team's code reviews.

- Continually contributed to establishing **code** and **design** patterns conventions.
- The scalability was achieved by progressively moving from monolithic to a distributed **architecture** with a collection of loose coupled, fault tolerance, running task nodes hosted in a **cloud** environment and communicating with each other via events.
- The **architecture** was based on C# .Net and .Net Core following the 12-FACTORS methodology:
 - The integration was achieved via a combination of an event broker implemented using RabbitMQ, and **Web API** for external domain contexts.
 - Databases: Sql Server for less complex models and MongoDB to support many of the domain models this way achieving higher throughput during read operations in CQRS.
 - For logging we used a middleware that connected to Kibana following conventions for easier troubleshooting.
 - For **Monitoring** I designed an AOP middleware based on Unity to intercept the routines that needed **performance** measurements, in combination with AppMetrics, InfluxDB, Graphana and **Azure** Monitor.
 - **Security** was achieved with OAuth 2.0 password and client access authentication using an in-house, **cloud** hosted identity server.
 - CI was supported by Team City with Git, Bitbucket and home-grown CI infrastructure based on Open Stack and GCE K8s to facilitate deployments.
- Implemented numerous tools and scripts to facilitate development and testing.
- By the time new and older clients were migrated over, our system was able to process over 1B dollars' worth of payroll taxes.

UTE Integration Tech Lead

Lead the **design** and development of the Company's HR Core product integration with the Tax Engine.

- Designed and implemented the processes and **services** that allowed the HR core domain and Payment information subdomains to be integrated to the Tax Engine solution.
- Collaborated with **business** analysts to implement the **business** requirements breaking down complex stories into smaller technical tasks that allowed team members to be more productive and deliver greater throughput to meet the team's deadline.

- Provided technical guidance to team members and conducted regular **code** reviews.
- Ensured that development followed the company's architectural guidelines.
- Successfully delivered our mission critical integration solution and onboarded our first customers before the expected deadline and on record time before tax season began.
- This integration solution was able to process a high volume of payrolls for all customers on a weekly basis:
 - DDD methodology was used to segregate the complexity of the tax domain **business** rules and create cohesive model.
 - Implemented optimized in-memory aggregations using TPL.
 - Scaling was supported by an event driven **architecture** using an event broker.
 - For **database** storage MongoDB was chosen for easier domain model storage and higher **database** access throughput.
- Monitored and triaged **production** issues and provided timely solutions using a combination team collaboration and migration scripts.

Recruiting App

Designed and implemented several features for the Core Recruiting **web** app, using **web** components, multi-tier **services**, DDD and Event Driven **Architecture**, **Javascript**, knockoutjs, bootstrap, css, html 5, C#, MongoDB, RabbitMQ, **Elasticsearch**, all supported by continuous integration using feature toggles to enable features at a future stage.

- Developed several end-to-end processes: IU components in **JavaScript** and back-end domain **services** including:
 - Translation with i18n
 - Front end validation and aggregated domain rules validation.
 - Elegant UI components leveraging knockout.**js** and bootstrap.**js** and CSS/less
- Collaborated regularly with **business** analysts, tech leads and team members to improve the **code** quality, domain specific language, **database** optimization and adhere to the company's domain driven **design** and **architecture** standards.
- Improved the scalability and **performance** of the solution using **Elasticsearch** and Event Driven processes.
- Implemented middleware integration with external recruiting **services** using **Web API** and **Web** Hooks.
- Implemented the app SSO and Identity server using OAuth 2.0
- Developed CI infrastructure features like hproxy keepalive using Open Stack.

*Technologies: C#, Net, MongoDB, Sql Server, RabbitMQ, **Elasticsearch**, OpenStack, Ruby, MVC, Typescript, **Javascript**, HTML, CSS, **Web API**, OAuth 2.0, Team City, Git, Bitbucket, Kibana, Graphana, Influx DB.*

September 2013 – 2014

ABB Optical Group www.abbconcise.com

Sr. **Software Engineer** Consultant

As project lead, I developed and architected a white label, multi-tenant and mobile responsive ecommerce platform built on a multi-tier Service Oriented **Architecture**, supporting high volume of transactions and scalability. This platform allows for two-thirds of the nation's independent eye care practitioners to create online stores for their patients to buy directly online. I had the responsibility of architecting and implementing the core components of the shopping cart, as well as front end to back-end components using Domain Driven **Design** and Test-Driven **Design**.

- Provided technical guidance and solutions to complex problems and contributed to every aspect of the project's life cycle, including requirement's gathering, **architecture**, development, and deployment.
- Migrated the original **Web** Forms based platform to MVC/SPA.
- Developed and architected the domain and service layers.
- Integrated back-end **services** with external **API**'s using TIBCO service bus.
- Develop framework components and MSMQ processes.
- Developed multiple front-end SPA's using MVC 5, **JavaScript**, knockout.js, JQuery, CSS3, Html5 and **Web API**.
- Developed **data** migration processes using SSIS.

*Technologies: C#, EF 6, .Net 4.5, SPA, MVC5, ASP.Net, **Web API**, MSMQ, TPL, WCF, SQL 2008, knockout.js, JQuery, CSS3, HTML5, TFS, Visual Studio 2013, SOA, TIBCO, AutoMapper, Unity IoC, MOQ, Scrum, SSIS, T-SQL*

February 2012 – September 2013

Docassist LLC (Startup) www.docassist.us

Sr. **Software** Developer

Developed from scratch a SaaS **Cloud** Document Management System built on a multi-layer Service Oriented **Architecture** to support rapid scalability and availability to store, manage and process large volume of documents. Researched, evaluated, and implemented the best and most affordable technologies leveraging the Open-Source stack to implement mission critical components.

- Developed a highly scalable **web**-based **cloud** document management application using *PHP, MVC with Apache 2.2, Html5 JQuery, CSS3, Bootstrap.js, **Java** 6, CXF.*

- Designed and developed a content service layer in .Net 4.5 with WCF and C#; integrated with an indexing service built on .Net 4.5 using Lucene.Net including:
 - SOA Components based on .Net WCF and a SOA layer written in **Java**, CXF.
 - Service tier and framework for OCR, image pre-processing and PDF manipulation using tools like Tesseract-OCR engine, AForge.Net, iTextSharp.
 - Zonal OCR **web** service layer including a Message Queue system in a **Windows** Service for asynchronous document processing.
 - Zonal OCR management in WPF to support zonal template creation on any document using WPF, C#, MVVM, Unity IoC, PRISM.
- Developed the Screen to Screen/Screen to Service integration from client's ERP applications with Docassist using the RatchetX tool.
- Developed a customer facing **API** service layer.

Technologies: PHP5.4, Doctrine, Javascript/JQuery, html5, Java CXF SpringSource, C# .Net 4.5 and PostgreSQL, Windows Server 2008 R2, Linux CentOS

April 2008 – February 2012

Team National Inc. www.bign.com

Sr. **Software** Developer

Led and developed several e-commerce applications from requirements definition, object modeling, multi-tier structure, database design, user interface design and cross application integration. Evaluated and recommended technologies including Silverlight, IIS Smooth Streaming Video and WCF. Defined application coding standards and versioning. Developed a set of CodeSmith's code generation template libraries, intended to streamline the application development process including database stored procedures, middle layers, and user interface, incorporating core libraries including the security framework.

- Led and developed multiple **web** subscription applications using ASP.Net, javascript/JQuery and Ajax. Starting from requirement definition, object modeling and database design, to coding, including the development of middle wear reusable components.
- Created the company's membership portal website including a custom CMS with access to all the commercial **web** apps using ASP.Net 3.5, MVC.Net 4.
- Developed of the company's billing system.
- Led the development of a Home Improvement e-Commerce application using Silverlight 3.0, WCF, ASP.Net 3.5, Ajax and JQuery; achieving a high level of customization for the bath tub selection, through dynamic

filtering of the related tub's attributes. The clients were very satisfied with this product, allowing them to customize the bathtub and see it rendered in an animated form, while adding features to it. Participated in the **architecture** of the **data** import process that allows the integration of any external vendors' product catalog into the product **data** base, using a formatted MS Excel document as **data** entry point.

- Created an online product's **search** website using PopShops webservice **API** as the **search** engine allowing client to **search** and purchase items in affiliated vendors websites. Using XSL to transform the webservice's XML response into html content.
- Developed the company's website portal using Telerik Sitefinity CMS, MS Expression **Web**. Analyzed the new website workflow requirements and generated new content completely styled with css and templates. Migrated and transformed the company's old website into a CMS driven website.
- Developed a mobile version of the membership website using JQueryMobile and MVC 4.

*Technologies: C#, ASP.Net 3.5, ASP MVC 4, Ajax, JQuery/JQueryMobile, Telerik, **Windows** Server 2008 R2, Telerik Sitefinity CMS, MS Expression Blend, Google Analytics.*

EDUCATION

University of Oriente, Santiago de Cuba, Cuba 1997-2002
B.Sc. Computer Science.

Summary

Senior Software Engineer specialized in software architecture and full software development life cycle, with proven track record developing diverse business solutions. - Experienced delivering projects with tight deadlines and short delivery cycles in agile environments using software development methodologies that include Kanban, twelve factor, domain driven design, event driven design, test driven design and RESTful services. - Experienced in multiple programming languages and frameworks including C#, .Net, javascript, typescript, nodejs, Angular and open source technologies. - Skilled in relational and NoSql databases, functional requirement analysis, software security, distributed systems and working with legacy systems while moving from monolithic to microservices architecture. - Strong organizational, mentoring, analytical and problem-solving skills, with ability to quickly adapt to learn new tools and technologies. My goal is always to innovate and contribute with my technical and organizational expertise to the development of quality enterprise software to achieve excellence for my shareholders and meet deadlines. - Passionate Real Estate Investor, experienced in real estate marketing and automation, acquisition and residential redevelopment.
