

Franck Bideau

Minneapolis, MN | [Willing to Relocate](#)

Phone: 612-702-1983 | **Email:** franckbideau@hotmail.com

Professional Summary

Accomplished **Software** Engineer and Lead Architect with 25+ years of experience in designing and implementing large-scale, high-performance solutions with initiatives ranging from modernizing enterprise legacy **systems** to building **cloud**-native SaaS platforms. Proven success in driving forward complex global **architecture**, technology and platform transformation strategies and aligning them with business objectives.

Education

- **Master of Science in **Software Engineering**** University of St. Thomas, MN
- **Master of Science and Technology** University of Paris VIII, France
- **Certifications:** AWS Certified Solutions Architect, AKF **Architecture** Certified

Key Skills

- **Cloud Application **Architecture****: Expert in **cloud** ecosystems (AWS, Azure) and serverless **cloud**-native friendly **architecture**, multi-AZ multi-regions infrastructure deployments, modern distributed applications patterns (CQRS, SAGA, Event Based, DLQ, Service Mesh, Discovery, Auto Scaling, Circuit Breaker, Retry, Self-healing).
 - **DevOps**: Led various **engineering** teams accelerate their devOps transformation with pipeline automation, IaC, **continuous** deployments reducing **software** releases from months to hours.
 - **Leadership**: Proven track record in mentoring teams, driving alignment between technical and product **leadership**, leading cross-functional teams to deliver cutting edge, market differentiator, innovative solutions that drive business growth.
 - **Scalability & Performance**: Expert in architecting scalable and highly available **systems** capable of handling millions of users during high demand events. Real-time decisioning **systems**.
 - **Security & Compliance**: Advanced knowledge of security protocols, identity management and access control, **data** encryption, zero trust and **cloud** security best practices.
 - **Data-Driven **Architecture****: Strong experience in implementing multi-regions partitioned **NoSQL** DB cluster with replication, **data** stream pipelines and scalable storage solutions.
 - **Key Technologies & Tools**: AWS & Azure Ecosystems, IaC (Terraform, CloudFormation, SAM), **Cloud** Foundry, K8S, EventBus (RabbitMQ, SQS/SNS, EventBridge), Observability tools (Splunk, Datadog, Dynatrace, ELK, Prometheus), **NoSQL/SQL** DB (MongoDB, DynamoDB, RDS), Redis, **Java**, **Spring** Boot, Python, Boto3, Gradle, GitHub (Actions, Workflows), Docker, Artilery.io, Spock, Junit, Mockito.
-

Professional Experience

BestBuy Sr. Principal Architect - April 2021 – present

- Directed several migration and modernization initiatives across several business units including retail, subscription, AdTech and OMS, transforming legacy applications into a **cloud-native architecture**, providing comprehensive prototypes, **architecture** and cost analysis, IaC templates, solution **design** artifacts, **cloud** native patterns best practices recommendations.
- Led **architecture** and implementation of a new **cloud** first subscription platform, 50+ micro-**services**, with a focus on scalability objectives capable of handling high-demand events, designed a real-time personalized subscription offer service, recurring billing supporting millions of users, subscriptions orders ingestion pipeline handling 25k enrollments per day, increasing annual enrollment of BestBuy TotalTech membership by 12%.
- Led and implemented a serverless **architecture** and GenAI powered internal chatbot solution to create a technical knowledge base for the **engineering** community, prototyped different RAG patterns options for documents embeddings and vectors databases in AWS Bedrock.
- Collaborated with Sales Transaction Hub team to evaluate alternatives **cloud** native **architecture** and **data** pipelines for the modernization of a legacy system **processing** millions of daily sales orders, delivering prototypes and guiding teams on cross accounts patterns, **api** security, workload scalability, eliminating legacy infrastructure and licensing costs while reducing transaction **processing** time from hours to minutes.
- Partnered with **cloud** platform team to deliver 10+ ARB approved enterprise-wide **architecture** patterns aligned with organization's strategies on multi-accounts, serverless **architecture** and acceleration of devSecOps transformation increasing agility of **engineering** by reducing cycles time from weeks to days.
- Spearheaded a **cloud** native CoP with bi-weekly sessions to foster a culture of **continuous** learning and innovation, to accelerate adoption of serverless **architecture**, promoting best practices around **cloud** infrastructure scalability, security, performance, and consistently attracted an average of 30 participants per session.
- Provided guidance to Retail teams (Agents Work Bench, Repair Work Bench) on **cloud** migration and legacy **systems** modernizations strategies, hybrid deployments, **data** synchronization patterns, and event based micro-**services design**, focusing technical depth reduction.
- Mentored **engineering** teams on **cloud** native patterns, serverless **architecture**, zero trust models, advanced infrastructure automation, **cloud** best practices and led with product **leadership** event storming sessions to facilitate the **design** of event based micro-**services architecture**.

Technologies: AWS (VPC, RDS, IAM, SQS, SNS, S3, ECS, Fargate, **API** gateways, lambda, WAF, EventBridge, **Amazon** MQ, SAM, CloudFormation, Route53, CloudFront, Redis, Kinesis, Kafka, Flink, DynamoDB, DocumentDB), AI (Bedrock, Jupyter Notebook, LangChain, LLMs, FAISS), **Java** 17, **Spring**, SpringBoot, Webflux, Docker, Github, Python, boto3, Artillery.io

Calabrio **Cloud** Application Architect - January 2020 – March 2021

- Implemented Calabrio One next generation **cloud architecture** in support of new application modernization initiatives, using serverless containers (EKS), eliminating EC2, shifting infrastructure tooling towards DevOps practices and pipeline automation infrastructure focusing on deployment time reduction.
- Architected & implemented a new centralized security model for CalabrioOne with a new serverless **api** gateway, offering a seamless SSO experience across CalabrioOne applications (Workforce management & Agents scheduling), a common IAM solution with new user access management and authorization **services**, using OAuth to propagate identity across applications.

Technologies: EKS, Rancher, Helm Chart, Terraform, **API** Gateway, Lambda, IAM, SQS, OAuth 2.0, SpringBoot, SpringCloud, **Spring** security, Docker, Gradle, Groovy, **Java**, Python, Artifactory, CloudWatch, ELK, Okta, Azure DevOps

DataSite Enterprise Application Architect - February 2013 – December 2019

- Led several **architecture** initiatives during the modernization of a multi-tenant SaaS platform into a global, highly scalable solution serving customers across three regions (North America, Europe, Asia), transitioning from a monolith to a +200 **microservices cloud-based architecture**
- Partnered with technology executives to drive strategic decision-making on global expansion, technology roadmaps, modular **architecture**, leading to the acceleration of new products development and an increase of DataSite global market share from 11% to 20%.
- Drove forward roadmaps and new platform technology investments on IAM, Global SSO, with a multi-regions MongoDB cluster, optimizing **design** for low latency and high reads, Caching, DRM, Encryption, secured storage, **cloud** adoptions and zero trust security
- Re-architected several core DataSite capabilities to support its global extension and its growing global user base including the rollout of a centralized login solution, a stateless security protocol enabling SSO across multi-regions instances, a global landing page consolidating all global M&A projects increasing page load performance from seconds to triple digits milliseconds.
- Engineered and drove forward the service mesh security **architecture** and new platform authorization model, segmenting security between FE and BE, ensuring zero trust principle using a token based trust model for scalability and low latency, implementing a signing token service, **API** gateway token exchange solution, optimizing performance by 10x with caching, achieving 100% rollout of the security library across +200 **services** (25 teams)
- Architected and implemented a new innovative, market differentiator, document redaction solution, **processing** 10M docs a month, designing storage solution for scalability, optimizing search algorithm and inverted index **design** for performance, using caching to reduce search response time from triple to double digits milliseconds while keeping caching cost low with on-demand caching strategy.
- Spearheaded a micro-**services** guild with bi-weekly sessions to foster a culture of **continuous** learning and innovation focusing on micro-**services** best practices, **cloud** patterns, security principles and scalable performant, resilient **design**, promoting collaboration and inner sourcing for all our common libraries and ensuring consistency across all 25+ **engineering** teams.

- Architected and implemented a new innovative solution for securing downloaded document with Digital Rights Management encryption technology preventing highly confidential **data** to be compromised, integrated fine-grained access control with the DataSite platform built-in policy management solution
- Partnered with AI/ML team to develop powered AI Virtual **Data** Room smart tools (i.e. redaction automation, documents categorization, ...) to accelerate the preparation of the deal rooms.
- Partnered with automation team and engineers to **design** blue/green deployment pipelines for both **API** routes and events routing along with BDD testing automation to automate deployment from PR to prod increasing **engineering** productivity with releases moving from quarterly to daily.
- Provided technical guidance to **engineering** leaders (VPs, CTO) & product leaders (CPO) on technology suitability & feasibility, optimal cost models & potential risks

Technologies & Patterns: **Java** 11, **Spring**, SpringBoot, SpringCloud, **Spring** security, Docker, OpenID, OAuth, MongoDB, Elastic Search, PingFederate, RabbitMQ, Redis, Adobe DRM, CloudFoundry, Reactive frameworks, Zuul, Hystrix, Eureka, Spoke, Jenkins, Groovy, AppDynamics, Splunk, Azure, **Cloud** Foundry.

Optum Application Architect January 2011 – February 2013

- Led collaborative sessions with cross cross-functional to **design** the **architecture** and integrations of the new consumer HSA portal with features for payment **systems**, contributions, and investments management.
- Led **architecture** analysis and feasibility of online healthcare claims payments **services** and payments tracking capabilities (TrustCommerce, PayPal, InstaMed) for the new Member Payment Portal
- Designed a **cloud**-based storage solution for consumer-facing portals and ensured compliance with IRM security standards and PCI regulations.

Technologies: Oracle ALUI Portal, IBM WebSphere ESB, **Web Services**, MongoDB, **Java**, SOA, XML/SOAP

Toro Company Application Architect September 2005 – December 2010

- Led the **architecture** of critical applications including **Customer** Care, e-Business, and Supply Chain **systems**.
- Designed and implemented IoT innovative solutions for fleet management, dealer connectivity, and digital asset management.
- Engineered several product innovation initiatives including Toro's Dealer Locator (with **Google** map), Dealer Connectivity (a custom client/server solution which provides real time dealerships sales and inventory **data** in order to improve Toro's production and shipping decisions), Real Time Odometer Tracking (a custom IoT solution which provides real time equipment odometer **data** tracking to automate fleet's maintenance schedule and drive growth of parts ordering)
- Directed the development center's activities and expanded technical expertise through coaching and agile methodologies.

- Reviewed and guided the work implemented by the offshore and onsite development teams (15 onsite engineers, 20 offshore)

Technologies: J2EE, open-source frameworks (Struts, Spring, Hibernate), Web Services (SOAP/REST), LDAP, XML, Oracle 9i, Tomcat 5.0, BEA ALUI 6.0 portal, Documentum 8.0, SAP R/3, Vitria, Comergent e-Commerce, Omnifind Enterprise search, Google Map API, Ajax

Metris Companies *Technical Architect June 2002 - August 2005*

- Architected and implemented Metris primary Credit Card real time approval platform (PS1)
- Contributed to numerous enterprise wide requirements gathering and analysis effort detailing business processes, user roles and responsibilities to establish needs and system requirements using use cases and UML.
- Created detailed solutions specifications documentation with UML and Together J
- Contributed to project plan with detailed schedule, milestones, tasks and resources allocation
- Supported and improved our software development processes, standards and best practices

Technologies: Java, open-source frameworks (Struts, Spring, Hibernate), Web Services (SOAP/REST), LDAP, XML, Oracle 9i, Tomcat 5.0
