SUMMARY OF QUALIFICATIONS

- High-energy Application Architect/Principal **Software** Engineer/Development Lead with over **23 years** of professional **hands-on software** development experience.
- Exceptional interpersonal and communication skills, excellent team player, quick learner, adaptive, smart, and **knows how to get things done**.
- MSc. **Management of Technology** – MSMOT 2021 **GPA 3.63** – University of Minnesota
- Extensive background in the following broad-based categories:

Service-Oriented Architecture
e-Commerce/n-tier Web Applications
Relational/Non-Relational Databases
Legacy to Digital Application Transformations.

Enterprise Applications
Cloud computing
Object-oriented systems

- Served as a Technical Development Manager/Senior Application Architect/Project Team Lead and Principal **Java** Programmer on medium to large-scale projects.
- Most recently used technologies and methodologies:
 - **Java**, Kotlin, **Spring**, **Spring** boot, OpenShift, Kubernetes, **Spring** Batch **Processing**, Apache Kafka, Apache Cassandra, Spark/Scala & Hadoop, AWS EC2 **Microservices**, AWS Lambda, SOA, SOAP/**RESTful web services**, JSON, React, Angular 2.0, Hibernate, Apache Storm, EJB 3.0, Ibatis, JQuery, JavaScript, **J2EE**, JNI, TOGAF, XML/XSD, XMLBeans, JibX, MySQL, Cygwin, Gradle, Git, GitHub, Maven, Apache http/tomcat, Apache Axis, ADSI APIs, Oracle, Ant, Eclipse/MyEclipse, IBM Rational **Software** Architect v 6.0 and v 7.0, PegaRULES Process Commander 4.2 & 5.2. Docker, Kubernetes
 - Agile scrum, Iterative, RUP, and Classic waterfall methodologies.

EDUCATION

- The University of Minnesota, Twin cities. **2021**
Master of Science in Management of Technology - MSMOT)
- The University of Windsor, Windsor, Canada **2000**
Bachelors of Computer Science (Hons Computer Science)
- The University of Punjab, Lahore, Pakistan **1998**
 - (Punjab Institute of Computer Science)
 - Bachelors of Computer Science**

PROFESSIONAL EXPERIENCE

- **Rolustech Inc. Minneapolis, MN** **February 2024 – Present**
Senior Application Architect

I am working in a **hands-on** development, **design**, and senior application architect role. Leading a team of three **software** engineers, a principal lead, and a technical project manager.

- Currently working on a bidirectional **integration** of the client's Syspro ERP system with CRM using the Codeless solution.
- Designed and help implemented the **integration** using REST APIs.
- Designed a complete integrated solution for the client to integrate the billing system with the newly proposed CRM.
- **Integration** is done through a **Spring** boot application REST **API**. I designed multi-layered **API**.

Methodology used:

- Scrum stand-up meetings, Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

Java Spring Boot, RESTful API, AWS, Codeless platform, Syspro ERP, SugarCRM, GitHub, JSON, Git, SourceTree, Jenkins, Confluence.

- **Express Scripts Inc. Minneapolis, MN** **October 2019 – February 2024**
Architecture Senior Advisor (IT)

I worked in a **hands-on** development, **design**, and senior role. I have worked with four different teams in Express Scripts/Cigna since October 2019.

Drug Entity Team**Order Request team****Medicare/Medicaid HPMS team****MLE development team****April 2022 - Present****November 2020 – February 2022****July 2020 – October 2020****October 2019 – July 2020**

I worked as part of the Machine Learning Enablement - MLE development team and more recently working with Drug Entity Platform Team.

- Worked on the main Drug **API** which is developed in Kotlin as a REST **API** while supporting, maintaining and enhancing the existing functionality.
- Also, was responsible for supporting, maintaining, and enhancing 28 other Kotlin/**Java Spring** boot applications consisting of transforming and updating the drug entity related **data** from DB2 to Mongo DB.
- As part of the senior developers at OrderRequest team I worked on the OrderRequest **API** and OrderRequest Presentation **API** both of which are developed as a **Java Spring** boot REST APIs.
- I was responsible for supporting, maintaining and enhancing the existing functionality.
- I was responsible for successfully delivering the PETCO client project of Order Request Team.
- Worked on Scala code to be deployed using Apache Spark in cluster-computing using Hadoop.
- The Scala job loads MLE R-script model to generate scores and create a new hive table ingesting those scores.
- Once the table is created, the scala job writes to the Kafka topic for the front-end UI to consume that message.
- Architected and implemented **Spring** boot application REST **API** for SMICU project.
- Architected, configured and implemented Kafka topics and consumer hooks for SMICU project.
- Architected, designed and coded from grounds up a complete **Spring** boot application called HPMS file upload automation. It is a sub-project for Medicare Part D plan finder.
- Both these **services** are deployed in **Pivotal Cloud** Foundry – PCF
- Also, implemented a complete POC by using AWS S3 buckets with local PCF deployed **services**.
- Managed, supervised, and implemented Junit test cases for all of the above REST APIs and suite of APIs owned by MLE team using Junit and Mockito for mocks.

Methodology used:

- Daily scrum stand-up meetings, Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

Kotlin, **Java Spring** Boot, **RESTful API**, **Pivotal Cloud** Foundry, OpenShift, AWS, Apache Kafka, Apache Spark, Scala, Hadoop, GitHub, JSON, Git, SourceTree, Jenkins, Confluence.

□ **NextEra Energy - Windlogics, Minneapolis, MN**
*True Source's Principal **Software** Development Consultant*

November 2018 – June 2019

I worked as a Principal **software** development consultant in a **hands-on** development and **design** role. I was responsible for maintaining and developing new features for wind and solar operational assessment - OPA platform called ManagER.

- Added a new **Spring** batch job module for Solar OPA.
- Developed a **RESTful** service interface with a 3rd party library to download curtailment **data** related to sites for solar OPA.
- Developed and implemented multiple **RESTful** service interfaces for existing modules and additional new functionality.
- Updated and maintained existing **spring** batch jobs for geomodel (3rd party) long-term **data**.
- Implemented new Scala jobs to normalize **data**.
- Implemented and maintained new and existing Junit test-cases for improved code coverage.
- Participated and actively performed code reviews, re-designed, and re-factored **java** code.

Methodology used:

- Daily scrum stand-up meetings, Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

Spring boot, **Spring** Batch **Processing**, Java1.8, IntelliJ, **RESTful Web Services**, Hibernate, MySQL, Cassandra, BitBucket, JSON, Git, SourceTree, Jenkins, Confluence.

□ **KornFerry International, Minneapolis, MN**

December 2014 – July 2018

*IntuitiveTech's **Java** Application Architect/Development Manager/Agile Coach*

I worked as a **Java** Application Architect/Development Manager/Agile Coach in a **hands-on** development and **design** role with the Palms team. I had the ownership/responsibility of designing, implementing, and maintaining the report subsystem. The reporting subsystem was responsible for generating the multi-lingual executive reports for all of the KornFerry product line. Also, part of my responsibility was to be an Agile coach which includes dev stand-up meetings, **design** and code reviews, story boarding/task assignments, Junit testing etc.

- Report subsystem was responsible for generating all the executive reports of KornFerry product line like viaEdge, KFALP individual, and group reports.
- Decoupled report subsystem from core Palms **architecture** dependencies to ensure all the communication was facilitated through REST interfaces instead of "hard/direct" calls for DAO access to/from report subsystem.
- Implemented new REST **services** for calculation pipeline and maintained/re-factored the existing REST interfaces for new and existing requirements.
- Implemented a new persistence-layer for report subsystem to persist existing calculation R-scores to improve SLA response time and efficiency.
- Implemented new JSON contracts for all content related **data** from MarkLogic.
- Also implemented new "Proof Of Concept - POC" solutions, which included a new R based calculation engine. I implemented complete POCs using Revolution R (Microsoft R Server) and also explored some open-source R solutions to optimize the calculation pipeline.
- Implemented Junit test cases for all the existing and new code.
- Participated and actively performed code reviews, re-designed, and re-factored **java** code.
- I was responsible for porting the report subsystem code from Glassfish app server to JBOSS EAP 6.4
- I developed the complete roadmap with tutorials to migrate our entire code base from SVN repository to Bitbucket repositories. I worked with the **integration** team/deployment team to streamline the development, QA, and release process.

- I introduced and trained our development team to use the GitFlow branching strategy for development.

Methodology used:

- Dev scrum stand-up meetings, Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

EJB 3.0, Java1.7/1.8, Glassfish, JBOSS EAP 6.4, AWS EC2 **Microservices**, AWS Lambda, **RESTful Web Services**, Angular 2.0, JPA, Rengine, Eclipse, MS SQL, MySQL, MarkLogic, SVN, BitBucket, JSON, Git, SourceTree, Jenkins, Confluence.

- **BestBuy, Richfield, MN**
*Accenture's Consultant **Java** Architect*

September 2014 – December 2014

I worked as a Consultant **Java** Architect in a hands-on development role with the Recommendations team developing “**Complex Event Processing - CEP**” solutions. Recommendation team was responsible for developing solutions to enhance the **customer's** shopping experience by building scalable **services** that provide relevant product recommendations increasing **customer** engagement which drives loyalty resulting in higher conversion rates

- Recommendation solutions provide capture and combine real-time signals from the physical world with location **data**, online activities, social media, and many other types of **contextual** input.
- Technology that enables rapid aggregation of **data** from multiple sources and delivers insights that can give users an immersive and valuable experience.
- Designed, developed, and deployed Recommendations CEP Engine Ver: 2.0 using **Apache Storm** (distributed real-time computation system), **Apache Kafka** – a publish-subscribe messaging distributed system and **Apache Cassandra** as a scalable and high availability database.
- Implemented two (Also Viewed & Also Bought) **java**-based Storm topologies for **processing** complex event **data** for 12 different REST-based APIs like “Customers – Also Viewed, Also Bought, Most Viewed, Most Bought” etc.
- Also, implemented new “Proof Of Concept - POC” solutions.
- Implemented Junit test cases for all the existing and new topologies.
- Participated and actively performed code reviews, re-designed, and re-factored **java** code for the topologies.
- Performed extensive performance tuning of Storm topologies to achieve 10.000 TPS.
- Git was used for source control.

Methodology used:

- Daily scrum stand-up meetings, Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

Spring Tool Suite – STS, Java1.6, **Spring**, **Amazon** EC2 Platform, Apache Storm, Apache Kafka, Apache Cassandra, JSON, Git, Jenkins, Confluence, VersionOne.

- **DigitalRiver, Minnetonka, MN**
Senior Development Manager for Microsoft team in USA/Agile Coach

November 2013 – July 2014

I worked as a Senior Development Manager and an Agile coach, which was essentially a very hands-on role. I was part of the Microsoft **delivery** team and was responsible for the Microsoft Online Store (<http://www.microsoftstore.com>), which again was a very high visibility role. As was responsible for leading three different teams around the globe in different time zones. The core team was located in the US, 2nd team was in Taiwan, and the 3rd team was in India.

- As a senior leader in the three-tiered team structure, I was also involved in hands-on actual code development for Microsoft Online Store.
- My primary role was to manage a team of **software** engineers to **design**, code, and unit test new features and modifications for the Microsoft Online Store.

- I was responsible for working with business and client representatives to build out and prioritize requirements.
- I was actively involved in the **design** and implementation of complex application features.
- I was responsible for coaching and mentoring team members on compliance with **good software design** practices, coding standards, and defined specifications.
- I was responsible for directly supervising a team of 2 – 5 **software** engineers in US and remotely coordinating with the team in Taiwan and India with their respective team leads.
- Worked on a project for the Microsoft online store. The details were confidential.
- Worked on another project with hands-on development to build a **web** service-based **integration** with Microsoft internal system for product recommendations for shopping cart e.g., candy rack recommendations for similar/related products in the shopping cart.
- I was also responsible for maintaining two fully functional Microsoft dedicated complete End-to-End environments (equivalent to UAT environment) from code check-ins, pre-deployment, and deployment tasks.
- Code review for each service implementation was mandatory. Each **developer** was responsible for inviting two peers for a code review meeting. Code reviews were conducted using Collaborator.
- GitHub was used for source control.

Methodology used:

- Daily scrum stand-up meetings, Mix of Classic Waterfall and Agile, storyboarding/tasks, and JUnit testing.

Technologies used:

Java1.6, **Spring**, **RESTful Web Services**, JSON, Tomcat 6, Cygwin, Git, GitHub, Jenkins 2.0, HP Quality Center, Confluence, VersionOne, Oracle, Eclipse IDE – Kepler.

□ **InterTect, Eagan, MN**

April 2013 – September 2013

*Principal **Software Engineer/Consultant***

Client: Calabrio Inc.

April 2013 – September 2013

I worked as a Senior **Java web services** consultant at Calabrio **Workforce Management software (WFM)**. WFM makes it easy for contact center managers to forecast accurately, develop schedules for multiple sites, track key performance indicators, and manage real-time adherence:

- As part of the WFM development team, I was responsible for implementing the core **web services** for supporting WFM UI using **RESTful services**.
- My primary role was to get the requirements from the business analysts and implement the required **web services** providing the endpoints for the WFM UI.
- WFM **web services** were implemented as a domain-driven **design** comprising of the service layer, domain layer, and repository (DAO) layer.
- Part of my job was to define the JSON contract between the WFM UI and webservice layer and then de-serialize JSON to domain objects.
- I was responsible for defining all the service-specific and common domain objects, object mappers and the repository (DAO) classes.
- Our development was not entirely TDD but testing is mandatory for all the service endpoints. Instead of a focus on code coverage percentage, the focus was kept on the end-to-end functionality by writing comprehensive functional test cases.
- TFS was used for storyboarding/tasks, Confluence for documenting all the **web services** endpoints with JSON contracts and application features.
- JIRA for bug tracking and resolution and Jenkins for **continuous integration**.
- Code review for each service implementation is mandatory. Each **developer** is responsible for inviting two peers for a code review meeting. Code reviews were conducted using FishEye.
- SVN was used for source control.

Methodology used:

- Daily scrum stand-up meetings, Agile storyboarding/tasks, and JUnit testing.

Technologies used:

Java1.7, Spring, RESTful Web Services, Angular, JSON, Jetty 9.0, Tomcat 6, Jenkins 1.5, JIRA, FishEye, Confluence, Team Foundation Server (TFS) 11.0, SVN, SQL server 2005, 2008, 2012, Eclipse IDE – Juno.

□ TEK Systems, Minneapolis, MN**Oct 2010 – Oct 2012***Principal Software Engineer/Consultant***Client:** Thomson Reuters*April 2012 – Oct 2012*

I worked as a Senior Java web services developer at Thomson Reuters with the WestLaw Next Analytics team:

- As part of the data orchestration DO team, I was responsible for implementing the billing investigation service module for the WestlawNext Analytics project.
- Data Orchestration DO is a service layer module implemented using Restful services, providing the endpoints for various client applications (UI layer).
- Part of my job was to define the UI-to-DO and DO-to-Backend service JSON contract and then using Codehaus API to de-serialized the JSON into POJOs.
- I was responsible for defining the java beans (POJOs), request and response mappers, data sorting algorithm and the backend service impl classes.
- I was responsible for making sure that we take the TDD approach for our development and also to make sure that our code coverage is above 90%.

Methodology used:

- Daily scrum stand-up meetings using scrum board, Agile storyboarding and TDD. I was responsible for writing technical stories and associated tasks for all these projects using Microsoft Team Foundation Server.

Technologies used:

Java, Spring, Restful web services, JDBC & Hibernate, SOA, JSON, Mockito, Tomcat v6.0, Eclipse Java EE Helios, Ant, Ivy & Maven, Team Foundation Server.

Client: WellsFargo*Sep 2011 – March 2012*

I worked as a Senior Java web services developer at WellsFargo with the BUS web services team:

- I have designed and implemented 5 webservice projects during the last 6 months at WellsFargo.
- My first project was to write comprehensive Junit test cases using Jmock for an existing on-going project to ensure 100% code coverage using Eclipse Coverage plugin. This project was for EiSi' NaviPlan application integration with BUS web services.
- The web service which I implemented was a complex aggregate service. It retrieves data from multiple backend services and then aggregates the accountDetails, commonDetails, trustHolding details & positions and trustAccount details in a consolidated schema interface to the BUS clients for this web service.
- I implemented "Search For Bank" web service for the Trust funds wire transfer application. This service was responsible for providing the list of banks matching the search criteria based on nationId, bankName, bicCode, branchCode, etc.
- I also implemented "Search For IM Portfolio" web service for the IM Dashboard project. This service was responsible for providing the list of matching portfolios and their details based on the search criteria which was based on partial or full account name and/or account number.
- Another web service which I implemented was called "Risk Optics". This service was also implemented for the IM Dashboard project. This service was responsible for providing complete details for a specific portfolio that was selected out of the list from "searchForIMPortfolio" web service.

Methodology used:

- The methodology used for these projects was Agile. I was responsible for writing technical stories for all these projects using VersionOne.

Technologies used:

- **Java**, **Spring**, SOAP **web services**, JDBC & Hibernate, SOA, XML beans, XML/XSD, Apache Axis 1.4, Weblogics, Eclipse **Java** EE Helios, Ant & Maven, Subversion.

Client: Jostens Inc

Oct 2010 – July 2011

I worked as a Senior **Java/J2EE** consultant at Jostens Inc. I worked on the Yearbook project. I was responsible for designing, developing, and maintaining **web services** for the Yearbook project. Following are the details of the tasks I performed and was responsible for:

- I designed and implemented a report module for manufacturing reports from the production plants of the yearbook product.
- Fixed and enhanced the current display functionality of the mailing display page (UI) to better process the user actions and display the results.
- Implemented new interfaces for the YearBookYourself service. This new service will provide the complete CRUD functionality for the templates in the designer module.
- Implemented **web** service interfaces for YearBookYourself page sharing functionality through email and on Facebook.

Technologies used:

- **Java**, **Spring**-JDBC, Servlet, SOAP, JSP, JavaScript, JQuery, JibX, XLSFO ,XML/XSD, Ibatis, Oracle 10g, Eclipse, Maven, Subversion, **web services**.

□

□ **Virtelligence Inc., Minneapolis, MN**

Oct 2009 – Sep 2010

Principal **Software Engineer/Sr. Consultant**

Client: Carlson Marketing WorldWide

Aug 2010 – Sep 2010

I worked as Senior **Java/J2EE** consultant at Carlson Marketing Worldwide. I worked on the Shutterfly gift promotion project. I have designed, developed, and completed a server-side multitask batch process written in **java** which performs the following tasks:

- Retrieve the participant id of the Shutterfly promotion from the backend database.
- The process gathers information for the participant through a **web** service.
- Using the participant information, the process, then utilizing business logic retrieves the next available code.
- The next step is to mark the code as consumed and inform the promotion participant the promotion code.
- Once the batch process has completed all the tasks successfully for all the participants of the promotion, it then generates the report for the business department in a comma delimited file.
- The last step of the batch process is to ftp the file to the business department and archive the file for future audit purposes.

Technologies used:

- **Java**, **Spring**-JDBC, JibX, XML/XSD, XMLbeans, MySQL, Eclipse, Maven, ClearCase, **web services**.

Client: United Health Group

Oct 2009 – Aug 2010

I worked as a Senior **Java/J2EE** consultant at United health IT on the myoptumhealth.com portal:

- I have designed, developed, and completed from scratch the complete health tracker module of myoptumhealth.com.
- Health tracker module was multi-tier implementation with the UI layer being implemented in the ZK framework. **Spring** core was used to glue the UI, **web services** (SOAP/**RESTful**), and hibernate **data** layers.
- I worked with the **data** architect to **design** and implement the logical and physical model of health trackers schema.

- I was involved in the complete **design** and code implementation of the health tracker module from multiple Joint-Analysis-**Design** (JAD) sessions to the actual hands-on coding.
- As a team lead, I interacted with the business analysts, system analysts, **data** architects, enterprise and application architects, QA, project, and application development managers.
- I was involved in the complete and every stage of the **software** development lifecycle for this project.

□

Methodology used:

- The methodology used for this project was a hybrid or Agile and Iterative model.

Technologies used:

- **Java, Spring, SOAP/RESTful web services, Hibernate, XML/XSD, Mule, Apache CXF, Apache http/Tomcat, Eclipse/MyEclipse, Maven, Run-Jetty-Run, Subversion, SOA.**

Also part of my job was to mentor other team members, conflict resolutions and task assignments. I am also responsible for the knowledge transfer to the offshore team for post-production maintenance.

□ **Blue Cross Blue Shield Of Minnesota, Eagan, MN** **May 2006 – Sep 2009**

Senior CRM/**Java** Application **Developer/Team lead**

Worked as a Senior CRM/**Java** Application **Developer/Team lead** at Blue Cross Blue Shields Minnesota leaders in health care industry. I have worked on the following projects:

- I have designed and developed a **Java**-based application for one of our internal department for auditing purposes.
- I have worked with the Blue Cross Exchange team to implement the HIPPA compliance requirements (mandatory) for auditing purposes.
- I have designed and implemented an insert service interface (message-driven bean) which interfaces with the Clearing House system through MQ Queue; it reads an incoming EDI message and inserts it through JDBC to an oracle database.
- I also designed and implemented the other part of this project a service (Stateless Session Bean), which interfaces the **customer**-facing portal system with the oracle database at the backend and provides the **data** access to the portal screens.
- I have designed and implemented number of **web services** using Rational **Software Architect – RSA 7.0**, which is part of transforming the internet system at Blue Cross Blue Shields to Service Oriented **Architecture** (SOA).
- I was responsible for maintaining Hipaa Transaction Processor (HTX) application. This system was written in Enterprise **Java Beans (Ejbs)**. I have designed and implemented 276/277 Claim status **inquiry** and 270/271 Eligibility **Inquiry** components to be compliant with the latest HIPAA mandate.
- I was actively involved in designing and refactoring our core transaction **systems** to move from Vitria to Pega.

Following is the list of projects I have worked on:

- 27xViewing service, 27xInsert service, ClaimsAuditUtility, Claims Repository - CRP **Web** service, Internal Claim Number - ICN **Web** service, InterPlan Transaction System - ITS **Web** service, HTX – CS2 project, HTX – EEi4 project and ClearingHouse – ByPass project

Also, part of my job is to be on-call on a weekly basis (rotating) to support and maintain the Clearing House transaction **processing** system at blue cross blue shields Minnesota. I have successfully completed Pega System's Solution **Developer** and System Architect training to provide solutions to migrate from the current implementation of the pre-adjudication system from Vitria businessware to Pega system's PegaRULES process commander.

□ **Ceridian Corporation, Minneapolis, MN**

Jan 2006 – May 2006

Clientek's Senior Technology Consultant

Worked as Clientek's Senior Technology Consultant.

- I was responsible for developing a critical part of the Ceridian's payroll preview system.

- I worked on the authorization and authentication module of the front-end for the payroll preview system. This front-end application was developed in ASP.NET 2.0 and C#.
 - Also, part of my job was to setup the authentication **data** in Active Directory. I used ADSI APIs to communicate with the Active Directory.
 - I was also responsible for the code optimization of the main payroll **processing** module which was written in **Java**. The tool used for code optimization was code pro.

- **Parametric Technologies Corporation, Minneapolis** **July 2005 – Jan 2006**
Clientek's Senior **Java** Technology Consultant
 Worked as Clientek's Senior **Java** Technology Consultant at PTC.
 - I was responsible for developing a solution for PTC's next-generation Windchill based products.
 - I was responsible for developing a capability for Windchill products to integrate third-party tools from within these products. It was to develop a reusable common component **architecture** which would have facilitated the user to launch these tools and view/manipulate different object/components using these third-party tools.
 - PTC had developed its presentation framework to replace JSPs, which is known as Dynamic Client **Architecture** which is XML-**Java** base **architecture**. I was using DCA to develop this reusable common component. Apart from DCA, all of the PTC's Windchill based products are designed and modeled using Rational Rose. Using Exlipse 3.x as the IDE.

- **Clientek Inc., Minneapolis, MN** **May 2005 – July 2005**
Sr. Technology Consultant
 - Responsible for creating and documenting a deployment package for Ceridian's Payroll Preview Enterprise Application.
 - Worked on complex module dependencies resolution-based **software** installation and configuration e.g., Websphere Application Server, DB2 Server/Client, Websphere MQ Series, OpenLdap, third party libraries, and tools.
 - Early phase analysis for logging infrastructure.
 - I attended a week-long technical training seminar for the next generation distributed **processing** solution for Ceridian's Payroll Preview Application

- **eFunds Canada Corporation, Toronto** **Sep 11, 2000 – May, 2005**
Sr. **Software** Engineer/Team Lead
 - Worked as a Sr. **Software** Engineer/Project Team Lead with a team of 7 programmers, DB programmers, Business analysts, and **software** engineers on a variety of financial application projects like Merchant Accounting System (IST/MAS), IST/Clearing and IST/AllCard etc. for companies like National **Processing** Company (NPC), the second-largest processor in North America, First Horizon Merchant **Services** (USA), ECHO (USA), RedeCard (Brazil) and Luottokunta (Finland).
 - I worked in the **design** and implementation of GUI Application Framework (100% pure **Java** Servlet based GUI framework).
 - Took major part in **design** and development of the client-server (n-tier) GUI applications for all eFund's products.
 - Extensively Used UML for solving **design** issues. Used Rational Rose 2000 as **design** tool.
 - Used Visual Café/ Eclipse 3.x as the IDE, Ant as the build and deployment tool, Oracle 8i/9i, Sybase, and DB2 as the database, Jrun 3.x/4.x, Iplanet 4.1/6.x, Tomcat-5.0.28, Oracle 9i Application Server **Java** Edition, Weblogic 8.1, and Websphere 5.x/6 as application servers for different clients.
 - As a team lead, I was responsible for mentoring and building the team from grounds up.

- Also, part of my job was to keep the development efforts in sync with the client requirements. I visited the client-side frequently to gather initial and updated Business Requirements. To assist the Sr. Manager in co-ordinating the teamwork.
- **Seleriti Corporation (Pvt) Ltd, Minneapolis** **Dec 1999 – Sep 2000**
Consultant
 I worked as a consultant (**Solution Developer and Designer**) for the Seleriti Corporation (Pvt) Ltd. An Electronic Billing Payment and Presentment (EBPP) **software** provider.
 - I provided expertise in the framework **design/architecture** and implementation of EBPP system.
 - I was responsible for the application re-**engineering** of EBPP (**Java** Servlets, EJBs, Oracle 8, WebMacro) and **Web** Tracking System (JavaScript, Oracle)
- **Crescent Software Products (Pvt.) Ltd, Lahore** **May 1998 – August 1998**
Software Engineer/ Internee
 I worked as a **software engineer/ Internee** with a team of 5 programmers, analysts, 2 DB programmers, and 1 QA **developer** on a telecommunication project.
 - The name of the project ASRS Access Service Request System (ASRS).
 - It was developed for one of the largest telecom company in USA.
 - It was a rule-based, multi-tier classic client-server **architecture**-based project.
 - Also, performed **software** reverse **engineering** task to prepare functional specification (FS) of an existing ASR system for migrating it to a **web**-based system.

PROFESSIONAL CERTIFICATIONS/SEMINARS

- Object-Oriented Analysis and **Design** Certification.
 - **Venue:** Punjab Institute of Computer Science, Lahore
 - **Resource person:** Dr. Dentcho Betanov
- Seminar/workshop on Object-Oriented Technology.
 - Object Orientation Concept, Development Methodology
 - Object framework
 - **Design** Patterns
 - Object Persistence (Object – Relational Database Mapping)
 - **Venue:** University of Windsor, Windsor
 - **Resource person:** Dr. Waleed Saba
- Oracle Database Administrator for Oracle 7 Platform - Ora-tech Certification.
- **Developer** 2000 Tools foundation - Ora-tech Certification
 - SQL*Plus, PL/SQL, Oracle Forms, Oracle Reports, Oracle Graphics etc
 - **Venue:** Ora-tech (Pvt.) Ltd, Lahore

SOFTWARE EXPERTISE

Languages:

Proficient in programming and **software development in several Languages in the past 12 years:**

Java, C, C++, PL/SQL (Oracle 9i), SQL, HTML, Prolog, UNIX, ASSEMBLY (Intel 80x86)

Light programming in:

C# (C-Sharp), Windows 32-bit **API** programming, MFC, Smalltalk.

Operating Systems:

MS Windows 98/NT/2000/XP, Sun Solaris, Silicon Graphics Irix, AIX, Linux.

Databases:

Oracle, IBM-DB2 v8.x, MS SQL Server, MS Access 2000.

Application Servers:

BEA WebLogic 8.1, IBM Websphere 6/7, Oracle Application Server, Iplanet Application Server 4.1-6.x, JRun 3.x-4.x, Tomcat.

Tools, Libraries & Packages:

PegaRULES Process Commander, Vitria Businessware, Borland JBuilder 9, Oracle JDeveloper, Websphere Studio, Eclipse 3.x, Visual Café, Ant, JUNIT, Cactus, MS Visual C++ 6.0, MS Visual Basic 6.0, JDK, Borland C++ 3.0, MS FrontPage 2000, Swing API SDK, Oracle Developer 2000, MS Office 2000, Rational Rose 2000 CASE Tool, ER-Win Case Tool.

Technologies/Methodologies:

Java Swing, JNI, Java Servlets, Struts, JSP, JavaBeans, EJBs, J2EE Server Technologies, RMI, CORBA, Windows 32-bit API programming, MFC, OOA, OOD, OOP, UML, design patterns, Internet/Intranet development, TCP/IP, CGI, RDBMS.

EXTRACURRICULAR ACTIVITIES

- International Politics, World affairs, Current affairs, IT news and read Computer Magazines.
-

NOTES

- References, original documents and certificates available on request.
