

SANDEEP DOLIA

SANDEEP.DOLIA@GMAIL.COM

952-846-8356

SUMMARY

Senior **Java Developer** with over 15 years of experience in **software** development. Expertise in **Java/J2EE**, including **Spring**, Hibernate, EJB, JNI, and MVC frameworks, including Struts 1.x/2.x on the **Web** tier. Extensive experience in writing multithreaded code for developing different applications, and with **Java/J2EE design** patterns, like Session Façade, Singleton, and DAO etc. Hands on experience using PL/SQL, DB2, Oracle, PostgreSQL, HBASE, Mongo DB and MS SQL Server as backend databases. Background includes working on several projects covering all areas of the **Software Development Life Cycle (SDLC)**, including Strategic Study, Requirements Analysis, Application **Design**, Technical Design, Development, Testing and Debugging, Implementation, Documentation, and incorporation of user feedback to plan enhancements in the application system in very fast pace agile projects.

TECHNICAL PROFILE

Talents	Years Experience	Rank (1-10) (10 is highest)
Java 6,7,8	12	8
J2EE	8	8
Spring / Sprint Boot,Hibernate	7	7
GWT	3	6
Javascript	6	6
Backbone.js/Angular.js with Bootstrap	3	5
Mobile IOS/Blackberry/Andriod	3	5
jQuery, ReactJs, Redux,Webpack	3	5
Big Data Hadoop/ Mongo DB	1	5
Oracle/PostgreSQL/SQL Server	5	5
AWS S3/Redshift/VPC	3	4
OAuth2	2	5
AWS Lamda and Dynamo DB	1	4
Dockers	1	3
AWS,Azure	3	4

WORK EXPERIENCE

Client: Pubfactory

March 2015 to Present

Lead **Software Developer**/ Sr. Full stack **Developer**.

Created multiple sites used by publishers to search and browse their content in a most efficient way and was instrumental

in development and maintenance of the following sites.

Brill.com

Elibrary.imf.org

bloomsburyprofessionalonline.com

- Was involved in the **design**, construction, and implementation of an application based on **Spring** MVC, **Spring** 4.1, and Hibernate 4.x with JPA framework, which used AOP and Dependency injection.
- Utilized **Agile methodology** to streamline the Development process with Iterative development and Scrum model. Designed, developed, and maintained the Hibernate based **Data** layer.
- **Designed and developed front end layer using React, Redux, Webpack.**
- **Used React JS routes, Redux's action, reducer, provider framework.**
- Big fan of unit testing and successfully used testing frameworks like Mockito and Mock MVC for the server side and qUnit for the UI code.
- Developed **Microservices** via REST and SOAP and hosted them via Dockers.
- Developed **Web Services** (REST **API**) using **Spring** MVC, **Java** 8.0, **Spring** Dependency Injection and Hibernate.
- Integrated REST endpoints with the Swagger **API** toolkit for better documentation and usage.
- **Merge and resolved conflicts to build to trunk in a Git environment.**
- **Created Microservices via Spring Boot.**
- Used Docker images for local development.
- **Created AWS Lamda functions via Node.js and Java and interacted with Dynamo DB and accessed the lamda functions via API Gateway.**
- **Used AWS Lamda and uploaded log files to S3.**
- **Also used AWS Firehose Kinesis stream to stream data to Redshift via S3 to perform live data analytics.**
- Used AWS SDK to communicate with S3 and also used Redshift for Reporting.
- Used closure, Lmdas and streams in **Java** 8 and gained system performance.
- Resolved a number of production issues and hot fixed them with in a very short interval of time.
- Mentored junior developers and thought them best practices.
- **Used Elstatic Search to perform custom full text and index bases searches.**
- Used Elastic Cache from AWS to perform Caching.
- **Created a server less web page using AWS Lamda and dynamo db on Angular JS.**
- Used Chef and provisioned App servers and **Web** servers on AW2 Ec2.
- Was involved in estimation effort on a large project.
- Set up **Google** Analytics reports and also generate a lot of analytics reports for the clients.
- I'm called Mr. **Google** Analytics and Mr. Counter Reports for generating reports from the log files.
- Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds.

The environment consisted of **Java** 1.8, **Spring** 4, Hibernate 4, Servlets, JSON, Jackson, Eclipse, Mysql, Postgres 9.x eclipse Oxygen and Git.

WORK EXPERIENCE

Client: Thomson Reuters WestlawNext

Feb 2013 to March 2015

Sr **Java Developer**/ Sr. Full stack **Developer**.

WestLawNext is Thomson Reuter's tool to do legal research. It effectively dominates the legal research business and is highly used by lawyers, aspiring law students and firms which require legal aid.

Responsibilities:

Worked on the **Web** Law Next project. The West Law Website was one of the biggest Agile projects in the world. It enabled law makers and legal students to search legal references and get precious information from it. It also facilitated storing of the searched information.

- Was involved in the **design**, construction, and implementation of an application based on **Spring** MVC, **Spring** 4.1, and Hibernate 4.x with JPA framework, which used AOP and Dependency injection.

- Utilized **Agile methodology** to streamline the Development process with Iterative development and Scrum model. Designed, developed, and maintained the Hibernate based **Data** layer.
- Designed and developed front end layer using Angular JS.
- **Created required directives to support security with in the application and for various other common utilities.**
- Big fan of unit testing and successfully used testing frameworks like Mockita and Mock MVC for the server side and qUnit for the UI code.
- Practiced TDD for various **Java** modules.
- Developed Server Side **services** using **Java** multithreading, **Spring** MVC, **Java** 8.0, **Spring** 3.1, and **Web Services** (REST **API**).
- Used **software** development best practices from MVC, **Spring**, and databases.
- **Merge and resolved conflicts to build to trunk in a Git environment.**
- Built and configured Jenkins for CI.
- Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds.

The environment consisted of **Java** 1.8, **Spring** 4, Hibernate 4, Servlets, JSON, Jackson, Eclipse, Oracle 11g, TFS and Eclipse Keeper and Git.

Client: Prime Therapeutics

Sr **Java/J2EE Lead Developer**

June 2011 to August 2012

Worked on Benefit Uplift application for Prime Therapeutics. Benefit uplift is the most complicated application for a PBM provider. It is the heard of all the applications for a PBM provider.

Responsibilities:

- Involved in designing, construction and implementing application in AS400 RXClaim in to **Java/J2EE**.
- Utilized a **Spring** 2.5, and Hibernate 3.0 framework, which used an AOP and Dependency injection.
- Utilized the Agile process to streamline the Development process with Iterative development and Scrum methodology.
- Extensively used jQuery for building UI components.
- Used UML in creating Class diagrams, object diagrams.
- Big fan of unit testing and successfully used testing frameworks like Mokita and Mock MVC for the server side and qUnit for the UI code.
- Practiced TDD for various **Java** modules.
- Developed Server Side **services** using **Java** multithreading, Struts MVC, **Java** 7.0, **Spring** 3.1, and **Web Services** (REST **API**).
- Created, configured and effectively utilized Jenkins and Nexus Sonatype for the projects and also create a Maven script for **continuous integration**.
- Added complex hibernate annotation in Hibernate JPA classes.
- Used **software** development best practices from MVC, **Spring**, and databases.
- Created a single page application with Angular JS and Mongo DB.
- Designed, developed, and maintained the Hibernate based **Data** layer. Configured and maintained the **Spring** Application Framework's IoC container.
- Worked on RXClaim to get the plan information.
- Introduced Hadoop in one of the modules (Map Reduce/Mongo DB).
- Backbone.js and require.js with bootstrap.css for a tool.
- Participated in the Agile process and performed Agile coaching.
- Performed most of my tasks using TDD Test Driven Development.
- Worked on creating webservices. Worked majorly on bottom up webservices.
- SOAP, JAX-WS, wsdl, xsd, xml
- Extensively used Soup UI for testing the webservices.
- Used modern agile concepts like pairing and emergent **design**.

Client: BI World Wide**Java/J2EE Lead Developer***March 2010 to June 2011*

Worked on an application called, RAVE. The project was once of the biggest Agile projects and got a Mobile and Website module. The Mobile module was for a Blackberry applications, iPhone application, and Android application using a PhoneGap framework.

Responsibilities:

- Involved in the **design**, construction, and implementation of the applications which utilized a Struts 2.0, **Spring** 2.5, and Hibernate 3.0 framework, which used an AOP and Dependency injection. Managed an offshore team of eight to ten people.
- Utilized the Agile process to streamline the Development process with Iterative development and Scrum methodology.
- Worked with business team to provide them project status.
- Worked with the project managers to provide the estimates.
- Used a lot of Javascript technologies JQuery, Json, YUI.
- Designed, developed, and maintained the Hibernate based **Data** layer. Configured and maintained the **Spring** Application Framework's IoC container.
- Configured and wrote **Spring** Batch 2.0 jobs using SimpleTriggerBean Class.
- Worked on an iPhone module and used Objective C, Cocoa, and jQTouch. Used PhoneGap framework on mobile devices. Worked on a **Web** based application on Blackberry and Android using a PhoneGap framework.
- Used a Light Weight Messaging framework, like Mule. Used REST and CFX Calls on Mule.
- Used JQuery for AutoComplete and AJAX features.
- Configured and installed Mule at the local desktop for the team using Eclipse. Used Mule with database and **Web Services** (AXIS and CFX). Wrote a lot of complex transformers as **Java** code and Mule configurations within bounds and out bounds.
- Designed and developed various modules of the application with **J2EE design architecture**. Implemented **Java/J2EE design** patterns, such as Factory, DAO, Session Façade, Singleton, and Value Object.
- Used Hibernate in the Persistence layer. Implemented features, like logging and user session validation using **Spring**-AOP module. Used XML style syntax for defining object relational Metadata.
- Developed Server Side **services** using **Java** multithreading, Struts MVC, **Java** 6.0, EJB3.0, **Spring** 3.0, and **Web Services** (SOAP and Axis. Reused ANT scripts using Maven and performed automatic deployment of the **Web** application in the Unix environment.
- Worked on Server Side validations using Struts Validator and Hibernate Validator framework.
- Wrote a front-end application with HTML, JSP, AJAX, JQuery, Struts Tag libraries. Wrote custom JSP tags for role-based sorting and filtering. Used JQuery for UI centric AJAX behavior. Used JIRA to assign, track, report, and audit the issues in the application.
- Used **software** development best practices from MVC, **Spring**, and databases. Wrote project Build-script by using ANT. Developed and executed Unit Test plans using JUnit and JMockit, ensuring that results were documented and reviewed with Quality Assurance teams responsible for Integrated testing
- Worked in a deadline driven environment with immediate Feature Release cycles. Provided extensive pre-**delivery** support using Bug Fixing and Code Reviews.
- Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds. Used Mercury QualityCenter for defect tracking.

The environment consisted of **Java** 1.6, **Spring** 3.0, Hibernate, JSP, Servlets, Struts, XML, JQuery, JQTouch, WebSphere 7.0, WSAD, RAD7.0, Oracle 11g, ClearCase, Mercury QualityCenter, MS Windows 2000/XP, ITIL 3.5, and Glassfish.

Client: Thomson Reuters**Senior Java / J2EE Designer / Developer, with Spring****Eagan, MN***October 2009 to March 2010*

Worked on the **Web** Law Next project. The West Law Website was one of the biggest Agile projects in the world. It enabled law makers and legal students to search legal references and get precious information from it. It also facilitated storing of the searched information.

Responsibilities:

- Was involved in the **design**, construction, and implementation of an application based on Struts 2.3, **Spring** 2.5, and Hibernate 3.0 framework, which used AOP and Dependency injection.
- Utilized an Agile process to streamline the Development process with Iterative development and Scrum methodology. Designed, developed, and maintained the Hibernate based **Data** layer.
- Configured and maintained the **Spring** Application Framework's IoC container. Configured and wrote **Spring** Batch 2.0 jobs using SimpleTriggerBean Class.
- Configured and installed Mule at the local desktop for the team using Eclipse. Used Mule with database and **Web Services** (AXIS and CFX).
- Wrote a lot of complex transformers as **Java** code and Mule configurations, within bounds and out bounds. Designed and developed various modules of the application with **J2EE design architecture**.
- Implemented **Java/J2EE design** patterns, such as Factory, DAO, Session Façade, Singleton, and Value Object. Used Hibernate in the Persistence layer. Implemented features, like logging and User Session validation using the **Spring**-AOP module. Used XML style syntax for defining Object relational Metadata.
- Developed Server Side **services** using **Java** multithreading, Struts MVC, **Java** 6.0, EJB 3.0, **Spring** 3.0, and **Web Services** (SOAP, AXIS).
- Server Side validations used Struts Validator and Hibernate Validator framework.
- Wrote the application front end with HTML, JSP, AJAX/JQuery, and Struts Tag-libraries. Wrote custom JSP tags for role-based sorting and filtering. Used JQuery for UI centric AJAX behavior.
- Used JIRA to assign, track, report, and audit the issues in the application.
- Used **software** development best practices from MVC, **Spring**, and databases.
- Wrote project Build-script by using ANT. Developed and executed Unit Test plans using JUnit and JMockit, ensuring that results were documented and reviewed with Quality Assurance teams responsible for Integrated testing. Worked in a deadline driven environment with immediate Feature Release cycles. Used Mercury QualityCenter for defect tracking.
- Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds.

The environment consisted of **Java** 1.6, **Spring** 3.0, Hibernate, JSP, Servlets, Struts, XML, WebSphere 7.0, WSAD, RAD, Oracle 11g, ClearCase, Mercury QualityCenter, MS Windows 2000/XP, ITIL, and Eclipse 3.5.

Pioneer Hi-Bred Inc.

Senior **Java** / **J2EE Designer** / **Developer**

April 2008 to October 2009

Worked on the Growing Point project. Growing Point was the primarily application for Sales and **Services** for Pioneer Hib-Bred Int'l. The objective of the project was to decommission the dependencies of the Partners application and get the feed from the new Financial Information system.

Responsibilities:

- Involved in the **design** and construction of an application based on Struts 1.2.8, **Spring** 2.0, EJB 3.0, Hibernate 3.0, **Spring** MVC, and WebSphere MQ series framework which used AOP and Dependency injection.
- Utilized an Agile process to streamline the development process with Iterative development and Scrum methodology.
- Configured and maintained the **Spring** Application Framework's IoC container. Configured and wrote **Spring** Batch 2.0 jobs using SimpleTriggerBean Class. Reused ANT scripts using Maven and performed automatic deployment of the **Web** application in the Unix environment. Used JSON and JQuery framework for asynchronously loading **data** from other **systems**.
- Used Mule 1.2.2 and ESB, and wrote a lot of UMO in **Java**. Used Mule with exception handling techniques. Configured and installed Mule at the local desktop, for the team using Eclipse. Used Mule with database and **Web Services** (SOAP and CFX). Wrote a lot of complex transformers as **Java** code and Mule configurations within bounds and out bounds.
- Implemented **Java/J2EE design** patterns, such as Factory, DAO, Session Façade, Singleton, and Value Object.
- Used WebSphere MQ series and JMS. Implemented features, like logging and User Session validation using a **Spring**-AOP module. Developed Server Side **services** using **Java** multithreading, Struts MVC, **Java** 6.0, EJB 3.0, **Spring** 3.0, **Web Services** (SOAP, AXIS, REST), XML, and XSLT.

- Used **software** development best practices from MVC, **Spring**, and databases. Used ANT to write project Build-script. Developed and executed Unit Test plans. Provided extensive pre-**delivery** support using Bug Fixing and Code Reviews. Wrote Technical Specifications for certain modules, and contributed to Release Notes for **software** builds. Used Mercury QualityCenter for defect tracking.

The environment consisted of **Java** 1.6, **Spring** 3.0, Hibernate, JSP, Servlets, Struts, XML, WebSphere 7.0, Eclipse 3.5, WSAD, RAD 7.0, Oracle 11, PVCS dimensions, Mercury QualityCenter, and MS Windows 2000/XP.

Pioneer Hi-Bred Inc.

Senior **Java** / **J2EE** Designer / **Developer**

April 2008 to October 2009

Worked on a Demand Planning / Value Model application, which enabled the forecasting of the demand of a particular crop in a specific area for a given year. It also generated reports which contained **data** from the previous years to enable decision making.

Responsibilities:

- Was involved in the **design**, construction, and implementation of an application based on Struts 1.2.8, **Spring** 2.0, and Hibernate 3.0 framework which used AOP and Dependency injection.
- Made extensive use of a **Java** collection interface, XML, UML, Servlets, and JSP.
- Reused ANT scripts using Maven and performed automatic deployment of a **Web** application in the Unix environment. Was involved in the **design** of the application using Rational Rose and Visio (UML Diagrams).
- Used a Struts 2.0 OGNL framework. Used EJB 2.1 for strong business **processing** and database operations.
- Used Flex and MXML for the front end in the Analysis module. Used XSL, XSLT, DTD, DOM, SAX, HTML, and DHTML. Used WebFOCUS for **Web** based reporting.
- Made use of WebFOCUS components, such as **Developer** Studio, Report Caster, Reporting Objects, Report Assistant, Report Painter, Resource Layout, and BI Dashboard. Used a Sybase database and assisted the back-end team to write DB2 stored procedures.
- Used SVN (CVS repository) for version control of the application code. Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds. Conducted Unit testing of **Java** modules. Used Mercury QualityCenter for defect tracking.

The environment consisted of **Java** 1.4.2, **Spring**, Hibernate, JSP, Servlets, Struts, Eclipse 3.5, XML, WebSphere Application Server 6.0, WSAD, RAD, DB2 8.0, PVCS dimensions, Mercury QualityCenter, and MS Windows 2000/XP.

Client: Target Corporation

Minneapolis, MN

Senior **Java** / **J2EE** Designer / **Developer**

January 2007 to March 2008

Worked on the DFD Physical Inventory project. Target planned to open a Food Distribution Center, and the Dedicated Food Distribution (DFD) program was underway to address the business needs for this initiative. The scope of this project was to support scheduling for Cost and Expense inventories at DC locations, to calculate the shortage at various levels of inventory for DC locations, and for generating reports to cater to business needs.

Responsibilities:

- Was involved in the **design**, construction, and implementation of an application based on Struts 1.2.8, **Spring** 2.0, and Hibernate 3.0 framework which used AOP and Dependency injection. Made extensive use of a **Java** collection interface, XML, UML, Servlets, and JSP.
- Reused ANT scripts using Maven and performed automatic deployment of the **Web** application in the Unix environment. Was involved in the **design** of the application using Rational Rose and Visio (UML Diagrams).
- Used WebFOCUS for **Web** based reporting. Made use of WebFOCUS components, such as **Developer** Studio, Report Caster, Reporting Objects, Report Assistant, Report Painter, Resource Layout, and BI Dashboard.
- Used SPUI tool to check a DB2 database and assist the back-end team to write DB2 stored procedures.
- Wrote stored procedures in Cobol DB2. Worked on CA7 for checking the job status of the batch process. Used PVCS Dimensions (Serena) for version control of application code. Used SOA to interact with other **systems**. Managed an offshore team. Wrote Technical Specifications for certain modules and contributed to Release Notes for **software** builds. Conducted Unit testing of **Java** modules. Used Mercury QualityCenter for defect tracking.

The environment consisted of **Java** 1.4.2, **Spring**, Hibernate, JSP, Servlets, Struts, XML, WebSphere Application Server 5.1, WSAD, RAD, DB2 8.0, PVCS dimensions, Mercury QualityCenter, MS Windows 2000/XP, OS390, SPUFI, Cobol, CA7, FILE-AID, Softech, JCL, DOA, and Eclipse 3.5.

Client: Target Corporation

Minneapolis, MN

Senior **Java** / **J2EE** Designer / **Developer**

January 2006 to January 2007

Worked on the Post Paid and Pre Paid **Services** (PPW / PPS) project. After successful completion of Post Paid Wireless application Target decided to change the look and feel of the application by adding some functionality of pre-paid cards to it, making sure that there was no impact to the application because of this change.

Responsibilities:

- Designed the logical **Data** Model for the PPW project. Migrated a poorly performing and outdated application from Swing, EJB 2.1 Session Beans, Entity Beans, and a WebSphere Applications Server based **architecture** to a Struts, **Spring**, Hibernate, and WebSphere Server based **architecture**. Integrated other **systems** through JMS, MQ Series, XML, and XSL.
- Reused ANT scripts using Maven and performed automatic deployment of the **Web** application in the Unix environment. Was involved in the **design** of the application using Rational Rose and Visio (UML Diagrams). It was a desktop application.
- Provided **Web** based reports using WebFOCUS. Made use of WebFOCUS components, such as **Developer** Studio, Report Caster, Reporting Objects, Report Assistant, Report Painter, Resource Layout, and BI Dashboard. Reviewed code and deployed **J2EE** applications to WebSphere.
- Managed a team of eight to ten developers. Led the team for creating a Testing approach and Test cases.
- Prepared technical **design** and deployment documents. Conducted a Stress test for all the applications for fine tuning purposes. Documented all the Test cases in TestDirector. Used PVCS Dimensions for code deployment.

The environment consisted of JDBC, JSP, Servlets, **Java**, Struts, JMS, MQ Series, EJB2.0, Oracle 9i, WebSphere 5.1, Unix, SOA, **Web Services**, and Eclipse 3.5.

Client: Target Corporation

Minneapolis, MN

Senior **Java** / **J2EE** Designer / **Developer**

September 2005 to January 2006

Worked on the Direct Imports Reporting (DI) project. Target initiated this project with the intent of reporting all the imports and its corresponding profits and loss based on the vendor. The **data** was needed to be extracted from an application called Rockport which was in Unix with an Oracle database.

Responsibilities:

- Designed the **architecture** for the WebFOCUS module which was used to do the reporting. Integrated both **J2EE** applications using Struts, JSP, Servlets, **Java** with WebFOCUS, and Oracle 9i for reporting. Was involved in the **design** of the application using Rational Rose and Visio (UML Diagrams).
- Made use of WebFOCUS components, such as **Developer** Studio, Report Caster, Reporting Objects, Report Assistant, Report Painter, Resource Layout, and BI Dashboard.
- Led the team in developing the enhancement and integrated it into the site in production. Was responsible for fine tuning the application in both the **J2EE** and WebFOCUS module.

Environment consisted of JDBC, JSP, Servlets, **Java**, Struts, JSP, Servlets, Oracle 9i, PL/SQL, WebSphere 5.1, and Unix.

Client: Target Corporation

Minneapolis, MN

Senior **Java** / **J2EE** Designer / **Developer**

August 2004 to September 2005

Worked on the Cycle Inventory Account and Cycle Inventory Scheduling (CIA/CIS) project. This project focused on creating a new online capability, accessible to the IAA (Inventory Analysis and Accounting) group in Target to schedule stores, and DC inventories, plan its frequency, building new interfaces to other **systems**, and extract required **data** from them. This involved building two new applications in Target, CIS and CIA.

Responsibilities:

- Worked on the prototype at the Initiation phase of the project. Was also involved in writing High Level and Low Level **design** of the System reports.
- Participated in Application Framework **design**, templates, and **API**'s according to UML.

- Involved in creating Use Cases, Class, and Sequence diagrams using Rational Rose.
- Worked with J2EE Design patterns (Singleton, Factory, Abstract, and Composite) and Model View Controller Architecture (MVC II Command Bean Framework).
- Developed a Web-based PDF reporting system with PDFWriter classes.
- Designed and developed DAO and Views using JSP custom tags.
- Assisted with developing Unit Test framework using JUnit to test Data Access Objects (DAO) for adjustments for inventories.
- Was responsible for fine tuning the application in terms of CPU usage, performance, garbage collection, etc.
- The environment consisted of Java 1.4, JSP, Servlets, Java Collections, WebSphere Application Server 5.1, WSAD, RAD, DB2 8.0, PVCS dimensions, Mercury QualityCenter, MS Windows 2000/XP, OS390, and SPUFI.

Client: Bank One

Junior Java / J2EE Designer / Developer

April 2004 to August 2004

Worked on a Re-engineering project, which required the creation of a new Online application to keep track of their Customer Information system. The project enabled the Bank to keep track of various customers based on their history with the Bank which would enable them to process credit limits.

Responsibilities:

- Participated in Application Framework design, templates, and API's according to UML.
- Made extensive use of Java Swing, Servlets Controller, EJB Session Beans, Oracle JDeveloper, and an MS SQL Server database.
- Assisted with creating Use Cases, and Class and Sequence diagrams using Rational Rose.
- Used JTree, JTable, JScrollPane, and different kinds of Grid Layouts. The desktop application development involved MVC and EJB to maintain the Customer Information system.
- Developed a Unit Test framework using JUnit to test Data Access Objects (DAO) for adjustments for inventories.
- Was responsible for fine tuning the application in terms of CPU usage, performance, garbage collection, etc.

The environment consisted of Java 1.4, Swing, AWT Servlets, XML/XSL, MVC Framework, Java Collections, JBuilder, MS SQL Server, CVS, Mercury QualityCenter, and MS Windows 2000/XP.

Client: Tata Info Tech

Junior Java / J2EE Designer / Developer

April 2002 to April 2003

Windows Based IDE for Linux.

Responsibilities:

- Participated in Application Framework design, templates, and API's according to UML.
- Made extensive use of Java Swing, Servlets Controller, EJB Session Beans, Oracle JDeveloper, and an MS SQL Server database.
- Assisted with creating Use Cases, and Class and Sequence diagrams using Rational Rose.
- Used JTree, JTable, JScrollPane, and different kinds of Grid Layouts. The desktop application development involved MVC and EJB to maintain the Customer Information system.
- Developed a Unit Test framework using JUnit to test Data Access Objects (DAO) for adjustments for inventories.
- Was responsible for fine tuning the application in terms of CPU usage, performance, garbage collection, etc.

The environment consisted of Java 1.4, Swing, AWT Servlets, XML/XSL, MVC Framework, Java Collections, JBuilder, MS SQL Server, CVS, Mercury QualityCenter, and MS Windows 2000/XP.

TECHNICAL SKILLS

Software and Tools: Servlet, JNDI, Spring, Hibernate, Struts 1.x/2.0, SOAP, JPA SOA, IoC (Dependency Injection) , Apache Tomcat, Eclipse 3.6,Hadoop,HBase, Mongo DB,Filenet, GWT.

Languages, Patterns, and Scripts: Java, JavaScript, JCL, XML, PL/SQL, HTML MVC Design pattern, J2EE Design pattern, JQuery, JSON.

Mobile: Phone Gap, jQTouch, jQuery,cocoa.

Databases: Oracle, MS SQL Server, MS Access, MySQL, DB2 UDB, Mongo DB.

Methodologies and Testing: UML, Agile, Object Oriented Analysis and Design (OOAD), AOP (Aspect Oriented Programming, ITIL RFC process, WBSD deployment process

EDUCATION

Bachelor in Technology (Information Technology)

SANDEEP DOLIA

- Eagan, MN, US

Contact Information

- 8mo-87b-u32@mail.dice.com
- 9528468356

Summary

17+ years of experience in development, designing and **architecture** of **web** based and mobile based applications featuring JavaJ2EEC# (.Net MVC 5.0). Also have a great experience in **web** technologies and have a strong knowledge and experience in Javascript frameworks like React JS, Redux,Angular.Js,Backbone.js, jQuery, HTML5. Worked and maintained **cloud**-based platform like AWS, Azure. Designed and **architecture** complex scalable and highly **data** driven applications using Hadoop,HDFS.
