

Scott Slivnik

(320) 248-5907 • Minneapolis, MN • sslivnik@gmail.com • [linkedin.com/in/scott-slivnik](https://www.linkedin.com/in/scott-slivnik)

SUMMARY

- Implemented robust **infrastructure automation** and Linux system management across AWS and Azure. Effectively utilized **Terraform**, Docker, **Ansible**, and GitHub Actions to build secure and scalable **cloud**-native architectures.
- Built and optimized high-**performance** microservices using Python frameworks including Django REST Framework, Flask, and FastAPI with SQLAlchemy for ORM, as well as Node.js with Express.js. Developed efficient relational and NoSQL database designs that balance **performance**, **scalability**, and maintainability.
- Consistently translated complex business requirements into effective technical solutions through collaborative stakeholder engagement. Recognized for clear **communication**, supportive team mentoring, and aligning technical decisions with strategic business objectives.

SKILLS

Cloud Platforms: AWS (EC2, ECS, EKS, S3, RDS, Lambda, CloudWatch), Azure (Virtual Machines, Container Apps, AKS, Blob Storage, SQL Database, Azure Functions, Azure Monitor)

DevOps & Infrastructure: CI/CD (GitHub Actions, Azure **DevOps**, GitLab, **Jenkins**), **Ansible**, **Terraform**, Docker Containerization, Shell Scripting (Bash), Git, Kubernetes, Prometheus, Grafana, Configuration Management, **Infrastructure** as Code, Incident Response, Root Cause Analysis, Microservices, **Agile** (Scrum)

Backend Programming: Python (Django REST Framework, FastAPI, Flask, SQLAlchemy), Node.js, (Express.js), TypeScript, SQL, RESTful APIs

Databases: PostgreSQL, MySQL, DynamoDB, Cosmos DB

System Administration: Linux Administration (Ubuntu, CentOS, RedHat, Debian), **performance tuning**, **automation** tools, **security** hardening, Regulatory Compliance

WORK EXPERIENCE

Asset Vision Logistics - *Wayzata, MN*

February 2015 - Present

DevOps Engineer / Backend Engineer

- Managed Linux **systems** across on-prem and **cloud** environments for over 5 years. Excelled at **performance tuning**, user/permission management, log rotation, and maintained rock-solid availability through proactive **monitoring** and alerts.

- Expertly implemented configuration management using **Ansible**, Bash, and Python for provisioning, configuration, and **security** hardening. Built powerful reusable playbooks and scripts for package management, service configuration, updates, and firewall rules, eliminating manual work and preventing config drift.
- Optimized GitHub Actions pipelines by implementing parallel testing, dependency caching, and streamlining build steps, dramatically accelerating our **deployment** workflows.
- Architected reusable **Terraform** modules for comprehensive **infrastructure** management that definitively standardized networking, compute, and database resources across dev, staging, and production environments, substantially improving **infrastructure** maintainability.
- Led the migration of our **infrastructure** from bare metal to AWS, leveraging EC2, ECS, S3, RDS, DynamoDB, Lambda, and CloudWatch to build a highly scalable backend **architecture**.
- Established robust centralized logging for ECS Fargate containers with CloudWatch Logs and implemented comprehensive alarms and dashboards to track service health, enabling swift issue detection and resolution.
- Expertly utilized Git for version control and team **collaboration** for over 5 years.
- Spearheaded evaluations of Google **Cloud** and Azure solutions, thoroughly assessing feasibility, costs, and alignment with business and technical requirements.
- Leveraged Docker and Docker Compose for containerization to create consistent multi-container dev environments, guaranteeing uniform setups across the entire team.
- Regularly engaged with stakeholders to thoroughly understand their business goals and technical requirements, adeptly tailoring technical explanations to each person's level of understanding.
- Gained valuable hands-on experience with AWS EKS for containerized microservices, effectively managing Kubernetes operations, load balancing, and storage **integration**.
- Successfully led incident response during a DDoS attack by methodically analyzing logs, traffic patterns, and Apache server-status to pinpoint malicious activity. Coordinated effective mitigation strategies and implemented robust **security** improvements.
- Directed the migration of a monolithic ColdFusion application to a microservices **architecture**, coordinating the decomposition of core functionalities into independently scalable **services**. This strategic overhaul was designed to enhance fault tolerance and enable more **agile** deployments.
- Developed high-**performance** Python RESTful API microservices using Django REST Framework, FastAPI, and Flask that securely connected **web** apps, mobile apps, and third-party **systems**.
- Crafted and optimized complex SQL queries, developing effective stored procedures, triggers, and views to efficiently process large-scale datasets.
- Engineered normalized SQLAlchemy ORM models that perfectly represented our complex business entities, significantly enhancing data integrity.

Scott Slivnik

sslivnik@gmail.com

- Built powerful microservices with Node.js and Express.js that delivered seamless real-time **communication** between dispatchers and truck drivers.
- Designed optimized DynamoDB data models with composite keys and global secondary indexes that dramatically improved query **performance**.

Sunray Printing Solutions – St. **Cloud**, MN

January 2002 – February 2025

Freelance IT Consultant

- Resolved complex **software** and **network** issues through systematic **troubleshooting**, accurately identifying root causes and implementing effective solutions to minimize downtime and maintain system reliability.
- Designed and deployed a secure Linux server environment specifically for crop insurance policy document processing. Implemented comprehensive **security** measures including firewalls, encryption, and access controls to meet strict regulatory compliance standards.

PROJECTS

Options Pricing & Volatility Analysis with Kubernetes [[GitHub](#)]

- Built and deployed a Kubernetes cluster that efficiently handled options pricing and volatility analysis workloads, starting with Minikube for **development** and transitioning to AWS EKS for production-grade **scalability**.
- Set up PostgreSQL with CloudNativePG to provide reliable high-availability database **services** with effective persistent storage management.
- Established comprehensive **monitoring** using Prometheus and Grafana, creating real-time visibility into application **performance** and system metrics with targeted alerting.
- Implemented horizontal pod auto-scaling based on resource utilization thresholds, which ensured consistent **performance** during intensive financial analysis processing.

CERTIFICATIONS

CompTIA **Security+**

August 2024

Google Cybersecurity Professional

July 2023

EDUCATION

St. **Cloud** Technical & Community College – St. **Cloud**, MN

3.8 GPA

Associate – **Computer** Programming, January 2002
