SUMMARY

Senior **Software** Engineer with over twenty years experience in **software** development. Skilled in all phases of creating production **software systems**, with an emphasis in client-server solutions. Active in all phases of the development life cycle, from requirements (user stories) through unit testing and release management. Industry background includes:

- **Java**, J2EE, JPA, JDBC, SpringBoot
- Tomcat 8, Hibernate 4.1, **Spring** 4
- REST, JSON, XML, XSLT
- PostgreSQL 12, MongoDB 6, Oracle 11g, MS SQL Server, MySQL, Hadoop
- Python, TensorFlow, NumPy
- IntelliJ, Eclipse, git, gradle, maven
- **Design** Patterns, OOD, TDD
- Ubuntu, Red Hat, DynamoDB. Kubernetes, **Amazon** EC2/RDS/S3/SQS/EKS

PROFESSIONAL EXPERIENCE

Contractor – Web Developer 5

Mar 2024 – Dec 2024

SAP Concur – St Louis Park, MN

Part of Capture Invoice team, with a goal to hit 160 seconds per invoice, down from 223. Hit 173 seconds as of December.

- Wrote two SQL reports, wired into REST calls and Ext.js gui front end for end-of-day statistics to be self-served, instead of end-of-month served by administrators. Used **Java** and SpringBoot to implement the REST calls.
- Wrote a five-layer REST and DynamoDB system for Auditor Running Stats, integrated into verification screen, to replace a separate tool. This reduced screen-flipping, improving per-invoice timings by 10-30 seconds per invoice. Used **Java** and SpringBoot for the REST calls.
- Performed various deployment tasks, debugged AWS development environments, and maintained a MySQL database both locally and in the **cloud**.

Web and Java Infrastructure Engineer - Web Services (Cloud)

Mar 2015 – Feb 2023

Best Buy – Minneapolis, MN

Engineer on a team that created a private **cloud** using OpenStack and Ceph. Created multiple single page applications with **Java**, **RESTful** and SpringBoot.

- Designed and implemented a Carrier Circuits record system as a single page application using **Java**, SpringBoot, REST, PostgreSQL, Flyway and React.js
- Designed and implemented an “Object Store and Share” single page application using **Java**, SpringBoot, REST, MongoDB, OpenStack Swift (S3), OAuth, and AngularJS
- Deployed and maintained a Ceph production 670 TB cluster and a development 160 TB cluster
- Created and maintained a Ceph performance testing suite for monitoring performance of the cluster. Implemented visualization tool with client-side-only AngularJS.

Contractor – Java Software Engineer**Jul 2014 – Mar 2015**

JAMF Software – Minneapolis, MN

Developer on a small team for Apple device configuration and provisioning for iOS and OS X. System was a single page application, and used **Spring** 4.0.5, **RESTful**, PostgreSQL 9.3, AngularJS 1.2, AWS Route 53, and mockito 1.95.

- Released beta for new provisioning system within two months of starting contract.
- Introduced AngularJS into production system. Introduced unit and **integration** tests.
- Created multi-environment configuration and deployment capabilities to AWS EC2.
- Implemented credit card monthly billing with **integration** to USAePay via SOAP **API**.

Principal Software Developer**Mar 2014 – May 2014**

FPX – Minneapolis, MN

Agile **developer** for configure-price-quote **software** system.

- Introduced and prototyped a Cucumber TDD solution that reduced time to create tests by five-fold (as compared to using JMeter to create tests).
- Worked with team to create a new build workflow and branch management procedures for new projects.

Contractor – Java Software Engineer**Mar 2013 – Feb 2014**

Quantum Retail – Minneapolis, MN

Developer for retail store inventory optimization application, a client-server system with batch **processing**. Technology stack included Jetty 8.1, Hibernate 3.4.0, **Spring** 3.1.2, IntelliJ 12, jQuery 1.8.1, maven, and gradle. Primary languages: **Java** 1.6, groovy 2.1, and JavaScript.

- Member of Core development group. Developed multiple screens in .jsp and jQuery using **Spring** MVC for administration screens. Performed build troubleshooting and consulting. Implemented using IntelliJ, **Spring**, Hibernate, maven, gradle, Oracle, EasyMock, Cucumber-JVM, Jenkins and Archiva.
- Followed Agile development process with two week sprints, including reviews for project business owners, retrospectives and planning.

Contractor – Java Software Engineer**Sep 2012 – Feb 2013**

Prime Therapeutics – Eagan, MN

Developer for internal rebates application. GUI developed with Model-View-Presenter (MVP) **architecture**. Implemented using Tomcat, Hibernate 4.1, JPA 2.0, **Spring** 3.1.1, GWT 2.4, GXT 3, JBoss errai 2.2, Eclipse, and gradle.

- Member of Rebates group, performed in depth requirements review, analysis and estimation. Developed multiple screens in GWT/errai for configuration system. Developed **processing** cache implementations for batch **processing**. Implemented using Eclipse, gradle, **Spring**, Hibernate, Mockito, DB2 and Jenkins.
- Followed Agile development process with two week sprints, retrospectives and project demonstrations for project business owners.

Contractor – Java Software Engineer**Nov 2011 – Aug 2012**

Best Buy – St. Paul, MN

Developer for online retail site bestbuy.com (top twenty largest by revenue). Redesigned, implemented and deployed a replacement homepage. User experience timings improved by 30%. Implemented using Tomcat, **Spring** MVC, Eclipse, maven and Opscode Chef. Deployed on **Amazon** EC2 load-balanced instances. Fronted by Akamai ESI and GTM. Prototyped FreeMarker template language system connecting legacy **data** to new frontend technology. Subject matter expert and mentor for version control, branch strategy, and release management.

- Member of Browse group, responsible for two major releases of bestbuy.com **software** using .jsp technology. Developed with Eclipse, ant, JBoss and Oracle.
- Member of **Cloud** Home Page group, responsible for complete rewrite of bestbuy.com/index.html page. Successful production release followed by gradual ramp-up to handling 70% of total traffic. New system allowed releases to production daily, replacing 45-day test and release cycle. Used Opscode Chef to automate image build-outs.
- Production technologies included **Amazon** EC2, **Amazon** S3, Akamai NetStorage, Akamai GTM. Full exposure to development and administration consoles for both **Amazon** and Akamai products.

Senior Principal Software Engineer**May 2002 – Nov 2011**

McAfee (Secure Computing Corporation) – St. Paul, MN

Worked on **Web** Reporter **software** for parsing, persisting, accumulating and querying of **web** access logs. Architected, estimated, scheduled, designed, implemented and tested for multiple **software** releases. Implemented using JBoss application server with **Java** applet client using Swing. SmartFilter proxy **software** for HTTP with remote administration, also implemented using JBoss and Swing. Trained and mentored local personnel and remote personnel in Atlanta, Georgia as well as off-site personnel in Bangalore, India.

- As Architect, achieved six successful releases of reporting **software** to hundreds of customers. Large installations achieved billions of rows, the largest achieved over 20 billion rows.
- Successfully internationalized the reporting product - over ten reporting languages and six user interface languages were created.
- Followed combined waterfall/agile development process, resulting in stable, baseline feature releases while also adapting to last minute changes, all while maintaining high quality, low post-release issue reports and minimal impact on schedule.
- Championed Test Driven Development as a way to motivate unit test creation to cause a reduction in post-release defects.
- Presented hour-long talks on “**Design** Patterns” and “Subversion and Guerilla Git” as part of a general employee **improvement** program.
- Introduced, created and maintained the group's wiki server to improve communication and historical information about the product's releases, **design**, technology rationales, etc.
- Standardized the **software** development process on the Eclipse IDE to improve **developer** productivity.
- Created automated build scripts using ant and installed Cruise Control build system for automated nightly builds per best practices.
- Converted CVS source repository to SVN to gain atomic commits and repository replication.
- Researched and implemented a 4-node Hadoop cluster for proof of concept reporting project.

EDUCATION

- **M.S. – Information and Computer Science**, Georgia Institute of Technology, Atlanta, Georgia
- **B.S. – Computer Science**, University of Iowa, Iowa City, Iowa

CERTIFICATIONS

- Machine Learning Specialization, Coursera, 2023
- AWS **Cloud** Practitioner Essentials, AWS Training, 2022
- Advanced Architecting on AWS, 2022

Tim Tiemens

- Plymouth, MN, US
