

Turaab Javed

(206) 299-0048

TuraabJaved@gmail.com

PROFESSIONAL SUMMARY

- Over 8 years of progressive experience as a **Business** Analyst with comprehensive expertise in **Business** Analysis and System Analysis within the **Retail** and E-commerce domains.
- Proven track record of facilitating JAD sessions with SMEs, stakeholders, developers, and end-user representatives to ensure alignment across all project participants and streamline **communication**.
- Demonstrated proficiency in conducting detailed GAP analyses of software functionalities to evaluate and recommend optimal Warehouse **Management** Systems (WMS).
- Experienced in SDLC methodologies, including RUP, **Agile** (Scrum), and Waterfall, with hands-on experience leading and contributing to projects using these approaches.
- Skilled in gathering and documenting **business** requirements, with a strong focus on creating comprehensive **BRD**, FRD, and SRS throughout the project **lifecycle**.
- Expertise of UML for creating detailed diagrams such as Use Case, Activity, Sequence, Process Flow Diagrams, DFDs, and ER Diagrams using tools like Rational Rose, JIRA, and MS Visio to define & optimize **business** and data processes.
- Experienced in analyzing and reengineering **business** processes using BPMN, documenting workflows, and maintaining RTM to ensure alignment and traceability of project deliverables.
- Hands-on experience in designing user-centric solutions, including the creation of wireframes, interactive prototypes, and UI mockups to translate **business** requirements into intuitive interfaces and workflows.
- Extensive expertise in the E-commerce **retail** sales **lifecycle** and ecosystem, including **OMS**, WMS, Fulfillment, Trade Promotions **Management** (TPM), Inventory **Management**, and Customer Support operations.
- Proven experience in developing scalable E-commerce web applications for **B2B** and B2C models, leveraging platforms such as Oracle ATG and other CMS to optimize user engagement and functionality.
- Proficient in Salesforce technologies, including Lightning Components, Salesforce Lightning Design System (SLDS), SFMC, and Salesforce Service Cloud, with hands-on experience in automation and workflow optimization.
- Hands-on experience with enterprise-level tools and platforms, including SAP Hybris, Adobe Experience **Manager** (AEM), Shopify, and Magento, to build robust and customizable e-commerce solutions.
- Expertise in cross-channel and multi-channel integration strategies, utilizing platforms such as mobile apps, PWAs, and headless commerce to deliver a seamless and consistent Omni channel experience.
- Extensive knowledge of **SCM** systems, with proven ability to collaborate with UX teams and leverage tools such as Adobe XD, Figma, and Sketch for user-centric designs and wireframes.
- Skilled in **retail** technology, including Oracle **Retail** Point of Sale (POS) applications, EMV payment processing, PCI DSS compliance, and integration of payment gateways like Stripe, PayPal, and Square.

- Proficient in API technologies, including Web Services Description Language (WSDL), SOAP, GraphQL, and REST APIs, to enable system integrations and data flow across platforms.
- Skilled in cloud-based architectures, microservices, and DevOps practices, including CI/CD pipelines, containerization (Docker), and cloud platforms like AWS, Azure, and Google Cloud for scalable deployments.
- Proficient with cybersecurity best practices, including IAM, SSO, OAuth, and securing APIs to ensure data protection and compliance with industry standards like GDPR
- Experienced in writing SQL Queries for testing RDBMS such as SQL Server, Oracle, and Teradata for data integrity.
- Experienced in the Informatica/ ETL (Extract, Transform and Load) of data into a data ware house/date mart and **Business** Intelligence (BI) tools like **Business** Objects Modules (Reporter, Supervisor, Designer, and Web Intelligence).
- Excellent understanding of Data Models, Master Data **Management**, Databases like Oracle, and sound **skills** in SQL.
- Experienced in **Business** Process Flow, **Business** Process Modeling, **Business** Process Re-Engineering Data Warehouse Data Analysis, Data Mapping, Data Modeling.
- Extensive knowledge of Salesforce.com **implementation** cycle in Sales Cloud, **Marketing** Cloud, and Service Cloud.
- Expertise in problem solving, system analysis and strong analytical and **product management**.
- Strong experience in working with **Business** and Technology teams through collaboration tools such as Confluence, JIRA, etc.
- Expertise in Advanced MS-Excel (Gsuite, sheets), PowerPoint, spreadsheets (Pivot table & Pivot Charts, Macros, VLOOKUP).
- Proficient in the use of Visual Studio, MS Visio, MS Word, MS PowerPoint, MS Excel, as well as MS Project.
- Solid understanding of Test Plans, Test Strategies, Test Scenarios, Test cases by reviewing **Business** and Software Requirement specifications and creating Gap Analysis for test purpose.
- Experienced and complete understanding of QA Life Cycle, which includes Designing, Developing, Execution and Documentation of the Test Cases, Automated Test Scripts and Test Plans.
- Experienced in GUI Testing, UAT (User Acceptance Test), Manual, Functional Testing of Client/Server & Web based application.

PROFESSIONAL EXPERIENCE

Northrop Grumman Corp. – Falls Church, VA

May 2023 -

Present

Sr. **Business** Analyst

The Scope of this project was to lead the design, development, and optimization of e-commerce platforms by leveraging expertise in Salesforce Sales Cloud, Oracle ATG, and ERP systems, while ensuring seamless

integration with payment gateways, shipping solutions, and supply chain systems. The goal is to enhance operational efficiency, deliver secure and scalable solutions, and provide an exceptional customer experience across B2B and B2C channels.

Responsibilities:

- Conducted user interviews, gathered requirements, analyzed the requirements using agile methodology and documented the requirements using Rational Requisite Pro.
- Analyzed B2C & B2B web properties & create new business plan, business requirements, and staffing requirements.
- Responsible for working with customers to gather the requirements and created functional specifications and created the dashboards using Tableau.
- Involved in preparing SDLC Documents such as BRD, FSD, Test Plan, Test Report.
- Worked on RTM Test Matrix, GAP analysis and SWOT analysis to check the compatibility of the existing system infrastructure with new business requirements.
- Conducted JAD sessions with internal and external stakeholders (Sales, Credit, Finance, IT, Ecommerce, Management, Marketing, and customers) to gather requirements.
- Used MS Word, MS Excel, MS Access, MS Project, and MS Visio for documentation and analysis reports among other project management and reporting tools.
- Created user stories and documented in detail entire work flows in confluence, managed scrum master responsibilities with Sprint Span of two week.
- Established comprehensive process flow diagrams to outline end-to-end retail operations, ensuring alignment with industry best practices and business objectives.
- Monitored and optimized the company's Salesforce Sales Cloud application by designing and implementing automated workflows for efficient lead routing and improved sales operations.
- Managed live e-commerce clients for mid-sized B2B and B2C websites integrated with ERP software, third-party logistics (3PL) systems, and shipping solutions, leveraging CMS for streamlined operations and enhanced user experiences.
- Evaluated and optimized existing e-commerce applications by identifying areas for improvement, implementing enhancements, and carrying out program modifications using agile methodologies.
- Led integration and optimization of secure payment processes, including credit card and EMV payment systems, compliant with PCI DSS standards, enabling secure transactions on web and mobile platforms.
- Delivered end-to-end solutions using Oracle ATG for B2C and B2B platforms, including Scenarios, Business Control Center (BCC), Merchandising, CSC, and personalization engines.
- Analyzed and developed functional and technical specifications for ERP software applications, overseeing projects in Mail Order, Website Integration, Store Interfaces, CRM, Pricing and Cost Management, Purchase Order/Receiving, WMS, and Order Tracking interfaces.

- Conducted process analysis workshops with cross-functional teams, utilizing tools like Lucidchart, Visio, and BPMN to translate insights into actionable workflows and process optimizations for retail and supply chain functions.
- Developed and integrated solutions for Merchandising, Point of Sale (POS) systems, and Supply Chain Management (SCM) systems, ensuring seamless synchronization with e-commerce platforms.
- Implemented RESTful and SOAP APIs to enable seamless integration between ERP, CRM, and e-commerce platforms, improving data synchronization and system interoperability.
- Worked with cloud platforms like AWS and Azure to deploy scalable e-commerce solutions, ensuring high availability and disaster recovery capabilities.
- Leveraged experience in SEO, A/B testing, and site performance optimization tools (e.g., Google Analytics, GTmetrix) to improve site traffic, conversion rates, and user experience.
- Involved in designing the Database architecture and implementing stored procedures, functions, views, and scripts using SQL to build data processing modules.
- Collaborated with merchandising and inventory teams to design process flows that streamline stock replenishment, reduce out-of-stock incidents, and optimize on-shelf availability.
- Create implementation and test plans for the CRM Marketing Email campaigns using Confluence.
- Maintained requirements in JIRA for tracking and testing purposes. Involved in Analysis, design, development and implementation of salesforce applications.
- Ensuring accuracy and integrity of ecommerce data through SQL queries which enhances the data quality as per business standard.
- Involved in defining technical goals and business processes for the ecommerce platform in ATG E-Commerce and Retail services.
- Created various Reports and Report folders to assist managers to better utilize Salesforce as a sales tool and configured various Reports for different user profiles based on the needs of the organization.
- Worked on SQL Queries for testing and data analysis of PL/SQL source code.
- Created Use Cases for the applications & facilitated QA group to develop Test Plan & Test scripts based on Used Cases.
- Involved with the QA team to conceptualize, determine and develop test approaches and methods for unit testing, integration and functional testing, load and usability testing according to the application complexity and test requirements.
- Documented and involved in User Acceptance Testing (UAT).
- Worked with the testing team on the final application including Mobile Application for Usability testing to verify whether all the user requirements were catered to by the application.
- Involved in online store Production Support that included incident troubleshooting and resolving tickets.

Sr. Business Analyst

The scope of this project was to develop and optimize OMS and DOM software to streamline order processing, improve operational efficiency, and enhance customer satisfaction. This includes integrating WMS with logistics and external EDI systems to ensure seamless data flow and supply chain operations.

Responsibilities:

- Worked on User Requirements gathering by interacting with stakeholders and business users using JAD and One to One interview technique to get a better understanding of the domain and current system.
- Elicited and analyzed the business requirements of client implementing Customer relationship management (CRM) module to maintain records of customer data on a monthly basis.
- Worked on Agile, Scrum methodology for development and Backlog documentation, wrote user stories based on INVEST criteria and documented the Sprint Backlog and technical backlog.
- Performed GAP Analysis between the "AS-IS" model of the legacy system and "TO-BE" model to identify the goals.
- Worked with the team designing the business process flow for the new platform in conjunction with SMEs.
- Converted Business Requirements into the Functional Specifications from UML and worked on changes with the help of Requirement Traceability Matrix and Impact Analysis.
- Documented Omni-Channel reports which include daily dashboards, operational metrics reporting, ad hoc operational troubleshooting and strategic reporting.
- Responsible for creating UML modeling plan, Use Cases, process flows, screen flows and business requirements documentation to model system development specifications, using MS Visio and Rational Requisite.
- Used the Office Suite extensively which included MS Word, MS Excel, MS Access, MS Project, MS Visio for various documentation and analysis reports.
- Played a key role in developing an in-house Order Management System (OMS) for seamless order entry and processing, as well as Distributed Order Management (DOM) software to streamline order workflows and enhance operational efficiency.
- Designed detailed customer journey process flows, mapping each touchpoint in the retail experience to identify bottlenecks, optimize processes, and improve overall customer satisfaction.
- Collaborated with cross-functional teams to categorize, prioritize, and resolve software application issues across all levels of Order Management Systems (OMS) and Execution Management Systems (EMS), ensuring smooth system performance.
- Worked extensively on OMS to ensure compliance with upgrade requirements, documenting workflows of existing and desired systems, including functionalities like Cash Analysis, Portfolio Analysis, Order Initiation, Order Execution, Trade Clearing, and Booking, while conducting comprehensive GAP analyses.
- Contributed to the integration of Warehouse Management Systems (WMS) with logistics platforms and EDI-enabled external systems, ensuring accurate and efficient data exchange and supply chain operations.

- Created and maintained process flow templates using Visio, Lucidchart, or other tools, enabling efficient updates and adaptations as **business** requirements evolved.
- Worked on integrating analytics for Omni channel campaigns with established data models.
- Involved in functionally validating Web services delivered in SOAP XML format as provided in specification document.
- Involved in Salesforce Sales, Service & **Marketing** Cloud and guiding clients on CRM solution for sales, **marketing** and services teams in the Ecommerce-Digital **Marketing**.
- Defined user stories in JIRA by creating tickets and elaborated stories to offsite development and QA teams.
- Worked with the team designing and implementing SQL queries for QA testing and report / data validation.
- Executed SQL queries to test the database for records that detect pricing and **product** label filters.
- Worked closely with the development team to troubleshoot bugs using defect tracking tool JIRA.
- Involved during the User-Acceptance Testing with end-users, **management** and development team in order analyze the **risk** involved in the updating of the existing system.

Lear Corp. – Southfield, MI

Sep

2019 – Jan 2021

Business Analyst:

Completed **implementation** of NetSuite's integrated CRM/ERP system which included: defining **implementation** strategy; converting company's legacy financial system, Point-Of-Sale (POS) system and internet store to NetSuite; training office, sales and warehousing personnel on the software; and redesigning Internet, Warehouse, and Order Fulfillment and Shipping operations.

Responsibilities:

- Collaborated with clients and technical teams to gather and translate **business** requirements into detailed technical specifications.
- Led **business** analysis, requirement gathering, and resource allocation for project **implementation**, ensuring seamless coordination between teams and stakeholders.
- Prepared and managed project plans, defining major milestones according to the SDLC model, specifically utilizing **Agile** Methodology for iterative development and continuous improvement.
- Collected high-level requirements and developed project scope for the **implementation** of NetSuite's CRM, aligning with **business** and technical expectations.
- Conducted stakeholder interviews and JAD sessions to gather and document **business** needs, translating them into comprehensive **business** and software requirements.
- Developed and maintained project documentation, including **Business** Requirement Documents (**BRD**), Functional Requirement Documents (FRD), and Software Requirement Specifications (SRS).

- Applied UML and RUP methodologies to analyze and translate **business** requirements into system specifications, designing Activity Diagrams, Sequence Diagrams, and other related artifacts using MS Visio.
- Designed and implemented workflows and permission structures within SharePoint to optimize team collaboration and data **management**.
- Documented server farm requirements and security-related specifications within SharePoint, following stringent data security protocols.
- Developed a consolidated and prioritized high-level requirements matrix for both B2C and **B2B** domains, detailing current and future state needs, and ensuring consistent delivery across all phases.
- Investigated and resolved issues within Supply Chain **Management (SCM)** and Warehouse **Management System (WMS)** software, applying best practices and methodologies to optimize performance.
- Performed gap analyses on existing process flows to identify and implement improvements that align with **retail** compliance standards and **business** needs.
- Designed and developed databases for merchandising and **marketing** purposes, automating recurring tasks through stored procedures and reports using SQL Server.
- Performed complex SQL queries to retrieve, manipulate, and validate data, generating ad-hoc reports and supporting data validation efforts.
- Conducted Unit Testing, User Acceptance Testing (UAT), and documented detailed results, actively engaging in various testing phases including functional, regression, load, smoke, and system testing.
- Supported QA teams by creating test strategies, test cases, and managing various types of testing activities to ensure system **quality** and performance.
- Facilitated comprehensive UAT processes, managing schedules, testing guidelines, and addressing user feedback for a smooth deployment experience.
- Developed and maintained integration processes for POS systems with Supply Chain **Management (SCM)** systems, ensuring data flow accuracy and system interoperability.
- Created and maintained detailed process flow documentation during system implementations, serving as a reference to minimize downtime and improve onboarding.
- Documented the Traceability Matrix for tracing the Test Cases and requirements related to them.
- Designed workflows & allocated permissions within SharePoint, optimizing data **management** & team collaboration.
- Assisted QA teams in developing test strategy, test cases, and actively monitored various types of testing - functional testing, regression testing, system testing, and load testing.

Goodyear Tire & Rubber Co. – Akron, OH

April

2017 – Aug 2019

****Business** Analyst**

The project includes implementing the Trade Promotions **Management** (TPM), Supply chain **management** (SCM) and Order **management** (OMS), Inventory **management** system and Supply chain groups to work together to address critical dependencies between processes like demand, supply, tooling and warehousing.

Responsibilities:

- Documented requirements using tools such as Rational Requisite Pro, ensuring traceability and alignment with **business** needs.
- Utilized UML methodologies to design Activity Diagrams, Sequence Diagrams, and Use Case Diagrams using Rational Rose and MS Visio.
- Facilitated JAD sessions to enhance **communication** between **management**, development, and user teams for clearer requirement understanding.
- Managed all phases of the Software Development Life Cycle (SDLC), including Waterfall methodology, ensuring systematic execution from planning through **implementation** and testing.
- Developed project plans with defined milestones and deliverables, following structured SDLC practices for iterative and incremental development.
- Worked on Trade Promotions **Management** (TPM), gathering data from multiple sources to provide a unified view for stakeholders, ensuring efficient promotional event **management**.
- Collaborated with Category Development Managers (CDM) to accurately document promotional events and seamlessly integrate them into the TPM system.
- Implemented processes for gathering supply chain **management** (SCM) data and optimizing supply chain operations, including warehouse-slotting and route planning.
- Conducted data analysis to improve supply chain operations in areas such as logistics, inventory **management**, and sales.
- Developed and maintained workflows for various modules, including Trade & Logistics functional areas within Microsoft Dynamics CRM.
- Designed and modeled system workflows using Rational Rose and MS Visio, creating detailed UC, Activity, and Sequence Diagrams for process documentation.
- Ensured seamless UX/UI integration with system functionalities, providing a smooth and engaging user experience.

PACCAR Inc – Bellevue, WA

Feb 2016

– March 2017

Business Analyst

This project involved development and **implementation** of a transportation solution that serves the tracking of aftermarket movement of products and bridging the gap, third party service providers 3PSPs, Original Equipment Manufacturers OEMs and other branded marketers.

Responsibilities:

- Collaborated with the technical team to create and maintain high-level design documents, ensuring alignment with **business** objectives and system architecture.
- Worked with team on optimizing Reverse Logistics and Inbound/Outbound Supply Chain (**SCM**) **product** solutions to improve operational efficiency and reduce costs.
- Served as a Supply Chain (**SCM**) Analyst for Reverse Logistics, ensuring seamless integration and **management** of supply chain operations.
- Contributed to project planning and coordination, ensuring smooth workflow execution across all phases.
- Worked closely with clients during the User Acceptance Testing (UAT) stages, managing the final signing process and ensuring successful transition to go-live.
- Worked with team in tracking defects using JIRA and generated defect summary reports to monitor and manage system performance.
- Participated in User Acceptance Testing (UAT) alongside the **Business** team to validate system functionality and user satisfaction.
