

Chaz Bertino

Software Developer – 678-862-6069

cbertin1932@gmail.com Marietta, GA 30067

Willing to relocate anywhere in USA

Authorized to work in the US for any employer

Summary

Chaz Bertino is a full-stack software developer with more than 8 years of professional experience. He has worked with microservices, front-end UX for both web and Android, back-end processing, and agile methodology and still looking to develop his skill and develop new ones in a top-tier, innovative company.

- Used Kotlin and Spring Boot to make SaaS back-end more resilient and remove single point of failure.
- Make front-end more user friendly and easier on the eyes by using best practices and the latest designs at the time to improve overall user-experience.
- Looked into new technologies and innovations to fix bottlenecks so application can run smoother.

Skills

- Node.js
- Typescript
- Microservices
- Rest API
- AWS
- VueJs
- Android
- Rust
- Kotlin/Java

Work experience

Software Developer

American Data Solutions – Smyrna, GA – February 2019 to February 2025

Fullstack developer for vehicle maintenance software.

- On Android, used Compose to create excellent and responsive UX experience for clients. Kotlin Coroutines for fast and responsive async functionality. JUnit for unit testing to speed up development.
- On the back-end servers, he used Kotlin/Java with Spring Boot to improve back-end **server** performance and gRPC microservices communication.
- Using Node.js microservice instance for data parsing and transformation of the XML-based formats to proprietary data formats.
- Worked on most aspects of front-end so that it looks and feels modern and providing a great user-experience. This includes using **AngularJS** for front-end **UI**, ThreeJS for viewing and interacting with 3D CAD files, and connecting with back-end.
- Typescript was used to speed up development and add type safety.
- Microservices and scalability, he worked with adding Kubernetes to make back-end more resilient and removes single point of failures which is critical for certain clients and their 24/7 needs.
- On the cloud front, worked with AWS to add instances and storage not only for Kubernetes microservices, but also for testing and storage on **developer** and QA side.
- Worked on porting the front-end from **AngularJS** - a no longer supported front-end framework - to ReactJS, for future productivity gains and even better UX with the modern framework.
- On advertising site, used Node.js to add communication functionality to get into contact with potential clients along with storing info in a Postgres DB.
- Investigates new technologies to help with problems and keep up to date on the latest technologies in the ever evolving field. Added Rust for back-end parsing for fixing deleterious JVM memory spikes and Rust Wasm to speed up processing large CAD files on the front-end.
- Python for scripting such as for Selenium unit testing. Greatly increasing QA productivity.
- Talked with clients to get input for modifying front-end needs for their datasets, update them on progress, and keep expectations in check.

Software Developer

Goma Studios/Preparti – Chamblee, GA – May 2017 to December 2018

- Python **server** for in-house asset **management**. Increasing productivity for remote asset creators.
- Used AR development for Android to develop AR apps for business invitations for high profile clients like 2chains.
- Used RxJava for fast and responsive async functionality.

- For **server**-side Preparti used Node.js with GraphQL and AWS services like S3 and DynamoDB to manage asset retrieval and user registration and info.
- For client-side Preparti website, used ReactJS and CSS to make a stylish and modern website to sell the Preparti app and manage accounts.
- Automated SMTP email **server** with Haraka.
- For Preparti app, used Unreal Gaming engine, to make navigating and styling events, mainly weddings, in 3D space with 3D assets, so the clients dream event comes true.
- Added Facebook connections to app and **server** to place guests to seats at event.
- XCode and TestFlight for iOS testing and deployment.

Android Developer

Mobile Apps Company – Smyrna – August 2016 to February 2017

Worked on the Android side of an in-house app for the companies employees.

- GUI made with Material **Design**.
- Integrating Firebase features into App.
- NoSQL database with Firebase.
- Image loading from Glide.
- Created compiled code with the NDK.
- Boost for enhanced C++ features.
- Encryption with Crypt++.
- Use SDL for special image effects in the NDK.
- Found memory leaks with leakcanary.
- Performed automated testing with Robolectric.
- Code reviews for cleaner and better code.
- Retrofit for Restful services.
- Built new features to enhance the UX for users.
- Configured Git repository in GitHub.

IT Specialist

Finesse Hair Salon – September 2009 to July 2016

Upgrade hardware and software.

- Client-side website made with HTML5, CSS, JQuery, and AngularJS.
- Create and maintain custom made website.
- A custom made time sheet made in C++.
- A custom made C++ app for making coupon with unique codes.
- PDF manipulation with XPDF.
- GUI with QT.
- Berkeley Sockets for web access.
- SQLite for client side storage.
- Mass emailer made in Ruby on Rails and connects with SQLite database.

Jr. Software Developer

Brand Mortgage – Lawrenceville, GA – February 2016 to May 2016

Replace Crystal Reports with iTextShape.

- Work as system administrator.
- Streamline access to Ellie Mae from in-house website.
- Worked in MVC architecture.
- Microsoft T-SQL Queries.
- .NET framework.
- Server-side C#.
- Server-side scripting with ASP.NET.
- Background services with Hangfire.IO.

Education

Associate of Applied Science in Game Development

Gwinnett Technical College – Lawrenceville, GA – August 2009 to May 2012

TECHNICAL SKILLS

- Proficient **programming** in Javascript, Rust, Kotlin, C/C++, Java, C#/.NET, Python, Lua, and Ruby.
- Deep experience with Full-Stack development.
- Willingness and eagerness to learn the latest technologies.
- Special expertise with the Android NDK.
- Deep knowledge of Firebase, Glide, JepPack Compose, Retrofit Material **Design**, NDK, Bluetooth Low Energy, Proguard, and many more Android related APIs.
- Experience in 3D graphics APIs such as Vulkan, OpenGL 4.0 and DirectX 11 and their vertex, geometry, and pixel shaders.
- Deep knowledge of **programming** cycles and game **design**.
- I have more than 3 years of experience with IntelliJ, Visual Studio Code, Visual Studio, Eclipse, CodeBlocks, Unity3D IDEs.
- Experience in PhotoShop, Illustrator, and GIMP graphics editors.
- Programmed MFC, Qt, TK, and FLTK GUIs.
- Other note worthy skills include CUDA, winSocks, PhysX and various SQLs.
