

DOMINIC T. APERE

dominicapere@yahoo.com | Dallas, GA 30157

Summary

A self-motivated and dynamic Cloud DevOps Engineer, SRE, Cloud Solutions Architect and Systems Engineer (Linux/Unix/Windows) with over 14 years' I.T experience in Configuration Management Process, Application Support/Design, Application Deployment, Security & Compliance, Orchestration of related I.T infrastructure, Performance/Fault Monitoring, Upgrading, Patching and Maintenance of Systems Hardware, Software and related company I.T infrastructure alongside interfacing with users to determine support needs. Strong technical and analytical skillset systems in a Cloud and Virtual environments. Able to work with technicians from various engineering disciplines to troubleshoot complex system architecture issues to ensure that the uptime, performance, resources, and security of the system meets the needs of the end users and clients. Hands-on experience supporting, automating, optimizing mission critical deployments in AWS, leveraging configuration management, building CI/CD pipelines, and managing cutting-edge deployment automation of DevOps processes and cloud resources.

Technical Skills

Cloud & SaaS Platforms: Amazon and Google Web Services, Salesforce.com, ServiceNow, Configuration management using Puppet, Ansible, and Chef, Terraform, Knowledge of Python, C/C++, and Java, Version control systems: Git, Perforce and Bitbucket, Troubleshooting of Linux & Windows Operating System, VIO Administration, VMware, Oracle Virtual Box, Web Services (IIS, Apache, MySQL, PHP, Nginx), Zenoss, Nagios, Check-MK, Splunk Master and Heavy Forwarders, AppDynamics, Dynatrace, Networking, Middleware, Admin UI for Back Office Configurations, Nodejs, Eclipse, Selenium, Load Runner, Visual Studio Code, Spacewalk, CICD and Monitoring Tools.

Experience

Dap-Tech Inc (BCD Travels) | Atlanta, GA

Cloud DevOps & Site Reliability Engineer / Multi Cloud Consultant Lead

11/2022 - Current

- Experience in building AWS, GCP and Azure Kubernetes Clusters from scratch using HashiCorp's Terraform as infrastructure as code, as well as building docker images with custom Dockerfile for different application frameworks.
- Worked with GCP Services like IAM, GKE, Cloud functions, Cloud Run, Cloud Scheduler, Cloud SQL, Big query, Cloud Storage, Pub/Sub, Cloud Composer, Dataflow, Shared VPC, Networks, subnets, Load Balancers, Stackdriver, Cloud monitoring, Container registry, Artifact Registry and Secret Manager.
- Experience in configuring Kubernetes Container Network Interface (CNI) for Pod to Pod communications within the cluster, Kubernetes Ingress Controllers, Ingress Rules to handle the inbound traffic to access services within the cluster.
- Experience in building and deploying Kubernetes Objects via helm chart by creating custom charts as well as leveraging managed charts within the helm community.
- Managed multiple Kubernetes clusters and docker containers across multiple environments and help with cluster upgrade without service downtime using pod disruption budgets, Kubernetes cordon, taint, drain to safely evict all pods from nodes before maintenance.
- Experience in working on AWS and its services like AWS IAM, VPC, EC2, ECS, EKS, EBS, RDS, S3, Lambda, ELB, Auto Scaling Group, Route 53, Cloud Front, Cloud Watch, Cloud Trail, SQS, SNS and many more.
- Experience in Cloud automation using AWS CloudFormation templates to create custom sized VPC, Subnets, NAT, EC2 instances, ELB, Security Groups and other AWS resources.
- Experience in creating complex IAM policies, Roles and user management for delegated access within AWS.
- Experience working with API Management Platforms like Apigee, Content Delivery Networks like Akamai and Cloud Front as well as Venafi for Certificate Management.
- Setting up continuous builds and monitoring with tools like Prometheus, Grafana, Thanos, Loki, Datadog.
- Mentoring and developing senior/junior DevOps professionals on best branching strategy for SDLC process.

- Designing, improving and driving implementation of all aspects of **DevOps** for our clients.
- Identify re-occurring requests/issues and develop methodologies to automate and reduce ticket volume.
- **Delivery** - Engagements will include **migration** of existing applications and development of new applications using AWS **cloud services**.
- Expertise - Collaborate with AWS/GCP field **sales**, **pre-sales**, training and support teams to help partners and customers learn and use AWS/GCP **services** in key market verticals & regulated industries such as financial **services**, healthcare, life sciences, and energy.
- Performing builds and managing configuration on production/development/testing environments.
- Troubleshooting issues with build and configuration.
- Building Monitoring Stack with and other modernized **DevOps** monitoring tools.
- Advising clients on the principles and benefits of **DevOps** and Agile **delivery**.
- Helping clients realize the business benefits of **DevOps**.
- Working closely with Developers, Scrum and QA teams for successful product deliverables.
- Implemented **Infrastructure** as **Code** (IaC) using **Terraform** to automate and manage the provisioning of **cloud infrastructure** across AWS, Azure, and GCP, reducing manual errors and accelerating **deployment** cycles.
- Developed reusable **Terraform** modules to standardize **infrastructure** configurations and ensure **scalability**, maintainability, and reusability across multiple projects.
- Integrated **Terraform** with CI/CD pipelines (Jenkins, GitLab CI, CircleCI) to automate **infrastructure** provisioning, updates, and decommissioning as part of a seamless **deployment** pipeline.
- Utilized **Terraform** Workspaces to manage multiple environments (dev, staging, production) and ensure a consistent **infrastructure** setup with minimal manual configuration.
- Implemented **Terraform** State **Management** using remote backends (S3 with DynamoDB for state locking, Azure **Storage**, or **Google Cloud Storage**) to ensure team collaboration and prevent race conditions during **infrastructure** changes.
- Automated the configuration and **deployment** of VPCs, subnets, **security** groups, load balancers, and EC2 instances on AWS, leveraging **Terraform**'s AWS provider for **infrastructure** provisioning.
- Collaborated on multi-**cloud** projects using **Terraform** to provision resources across AWS, Azure, and GCP, integrating provider-specific features and using the HashiCorp Consul for service discovery.
- Managed secrets and sensitive data securely using **Terraform**'s **integration** with HashiCorp Vault and AWS Secrets Manager to ensure encryption at rest and **compliance** with **security** policies.
- Implemented **Terraform Cloud/Enterprise** to centralize collaboration, manage teams, enforce policy checks (Sentinel), and audit **infrastructure** changes across multiple projects.
- Optimized **Terraform** plans and state file handling by implementing workspaces, lifecycle hooks, and by splitting large configurations into smaller, more modular files to improve **performance** and maintainability.
- Leveraged **Terraform**'s dynamic blocks and locals to reduce redundancy in configurations and simplify complex **infrastructure** setups.
- Ensured **compliance** and governance by **writing** custom **Terraform** modules and policies with Sentinel to enforce **security** and **organizational** standards.
- Automated **cloud infrastructure** testing by using **Terraform**'s **terraform** validate, **terraform** plan, and **terraform** apply commands in combination with tools like Terragrunt or TestInfra.
- Designed and implemented Disaster Recovery (DR) solutions by using **Terraform** for multi-region, multi-**availability** zone provisioning with automated failover mechanisms in AWS and Azure.
- Optimized cost **management** by analyzing **Terraform** outputs to monitor and report **cloud** resource utilization and optimizing provisioning for cost savings (e.g., using reserved instances and spot instances).
- Mentored junior team members in **best practices** for **Terraform** usage, including module development, state **management**, and CI/CD **integration**.

The Home Depot | Atlanta, GA

Cloud DevOps Engr / Site Reliability Engineer

11/2020 - 11/2022

- Run the production environment by monitoring **availability** and taking a holistic view of system health.

- Improve reliability and provide primary operational support for multiple large distributed **software** applications.
- Coordination and communication within the team and with customers.
- Selecting and deploying appropriate CI/CD tools.
- Troubleshooting CICD pipeline issues.
- Working experience deploying and configuring Hashicorp tools like Bamboo for CICD, Bitbucket for Source **Code** Repository **Management** and Vault for Secrets **Management**.
- Experience in managing and integrating **code** Quality tools like SonarQube, manage sonar rules, Quality gates and veracode scans.
- Familiar with all major Paas platforms such as **Google** App Engine, Openshift, **Cloud** foundry, CloudBees, etc.
- Proficient with container systems like Docker and container orchestration engines like Ec2 Container Service, AWS EKS, **Google** GKE and other public **cloud** container **services**.
- Managed Docker orchestration and Docker containerization using Kubernetes.
- Building/Maintaining Docker container clusters managed by Kubernetes Linux, Bash, GIT, Docker on GCP (**Google Cloud** Platform) and AWS (**Amazon Web Services**).
- Deployed and monitored scalable **infrastructure** on AWS using Docker and AWS EKS Cluster.
- Strive for **continuous improvement** and build **continuous integration**, **continuous** development, and constant **deployment** pipeline (CI/CD Pipeline).
- Building/Maintaining Docker container clusters managed by Kubernetes Linux, Bash, GIT, Docker, on GCP (**Google Cloud** Platform).
- Utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test deploy.
- Write automation scripts in Bash and **Python** for **performance** monitoring, **performance** tuning, notifications, pro-active monitoring etc.
- Design and implement CI/CD **DevOps delivery** system for the Linux teams with an innovative test framework that allows for significant reduction of capital expense requirements through equipment allocation and reuse.
- Designed, Configured, Maintained & Managed **Google Cloud** Virtual Datacenter **Cloud** computing platform with hosted **Enterprise** applications.
- Used Compute, **Storage**, Networking, other **Google Cloud** tools for various **operations**.
- Tasked with the coordination of CI/CD and **DevOps** teams in automating **deployment** of **infrastructure** inside **Google Cloud**.
- Deployed and monitored scalable **infrastructure** on **Google cloud** & configuration **management** using Docker and **Google** Kubernetes Engine (GKE).
- Performed installation and configuration of secrets **management** tool (Hashicorp Vault) inside **Google Cloud** Platform for managing the user and system credentials.
- Creating **Google cloud storage** (GCS) buckets, maintaining and utilizing the policy **management** of these buckets and used GCS coldline for **storage** and backup on **Google cloud**.
- Leveraged **Cloud** SDK and **Google Cloud** CLI to package and deploy containerized **web** applications on to the **Google Cloud** Platform and using **Google** Kubernetes Engine (GKE) to manage clusters and implemented autoscaling conditions to accommodate traffic variance.

Informatica | Redwood City, California

DevOps/DevSecOps Engineer / SRE

08/2020 - 11/2020

- Utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test and deploy application.
- Design of **Cloud** architectures for customers looking to migrate or develop new Paas, Iaas or hybrid solutions utilizing **Microsoft** Azure, **Amazon Web Services** or **Google Cloud** Platform.
- Control and **management** of **security operations** for process monitoring and incident **management**.
- Worked with Dynatrace SaaS and Dynatrace **Self-Managed Versions** to track complete end to end observability of the **infrastructure** and Application **performance** using synthetic monitoring.
- Ensure real time user experience is identified in **performance** environment using Dynatrace monitoring.
- Configure **integration** with tools like Prisma and Checkmax for container scanning during CICD **deployment** pipeline.

- Install and build **security** scanning/**code** quality on CICD Processes within the organization.
- Deployed and monitored scalable **infrastructure** on AWS using Docker and AWS EKS Cluster.
- Designed and implemented a **continuous** build-test-**deployment** (CI/CD) system with multiple component pipelines using Jenkins to support weekly releases and out-of-cycle releases based on business needs.
- Involved in deploying, managing and operating a 24x7 production Kubernetes clusters within AWS **cloud** environment.
- Used Jenkins pipelines to drive all micro **services** builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Provision **Cloud** Resources/**Infrastructure** via **Terraform Enterprise** and **Terraform** Open Source.
- Created CloudFormation template to deploy HashiCorp Vault, which centrally secures, stores, and controls access to secrets across distributed infrastructures and applications.
- Deploy a pipeline with CloudFormation to automatically test AWS CloudFormation templates from a GitHub repository which includes AWS TaskCat for testing, AWS CodePipeline for **continuous integration**, and AWS CodeBuild as the build service.

Tinroof Software Inc / NCR Corporation / Cox Communications | Atlanta, GA
Cloud Solutions Architect / DevOps Engineer
03/2018 - 08/2020

- Collaboration with the **IT** development team for ensuring suitable translation of architectural **solution** into robust and effective implementation.
- Conducting architectural evaluation, **analysis**, and design of **enterprise**-wide systems.
- Monitoring systems to make sure they meet business goals as well as user requirements.
- Designed and implemented a **continuous** build-test-**deployment** (CI/CD) system with multiple component pipelines using Jenkins to support weekly releases and out-of-cycle releases based on business needs.
- Experience with container-based deployments using Docker, working with Docker images, Docker Hub and Docker-registries and Kubernetes.
- Used Jenkins pipelines to drive all micro **services** builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Building/Maintaining Docker container clusters managed by Kubernetes Linux, Bash, GIT, Docker, on GCP (**Google Cloud** Platform).
- Assign CPU Resources to Containers and Pods then create monitors that looks over the Kubernetes cluster to throw alerts if any pods are in a state other than running.
- Served as the single point of accountability for client satisfaction across multiple **IT infrastructure** projects.
- Created CloudFormation template to deploy HashiCorp Vault, which centrally secures, stores, and controls access to secrets across distributed infrastructures and applications.
- Created CloudFormation template to deploy an automated framework to migrate relational databases by using AWS **Database Migration** Service Automation Framework on the AWS **Cloud**.
- Designed and built **cloud** service models including **Infrastructure**-as-a-Service, Platform-as-a-Service, and **Software**-as-a-Service for 6 companies.
- Designed and executed 6 end-to-end **cloud** implementations for organizations in hi-tech, marketing and healthcare.
- Implemented build stage- to build the micro service and push the docker container image to the private docker registry.
- Used Jenkins pipelines to drive all **microservices** builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Building/Maintaining Docker container clusters managed by Kubernetes Linux, Bash, GIT, Docker, on GCP (**Google Cloud** Platform).
- Utilized Kubernetes and Docker for the runtime environment of the CI / CD system to build, test and deploy.
- Developed microservice on boarding tools leveraging **Python** and Jenkins allowing for easy creation and maintenance of build jobs and Kubernetes deploy and **services**.
- **Migration** of Unix/Linux Servers from On Premises to AWS **Cloud** via vMotion and AWS CLI VM Import/Export then lunch EC2 instance from Imported Image.

Optimum Tech Inc | Marietta, GA
AWS Cloud DevOps Engineer
12/2016 - 03/2018

- Responsible for architecting, designing, implementing and supporting of cloud based infrastructure and its solutions.
- Proficient in AWS services like VPC, EC2, S3, ELB, AutoScaling Groups (ASG), EBS, RDS, IAM, CloudFormation, Route 53, CloudWatch, CloudFront, CloudTrail.
- Experienced in creating multiple VPC's and public, private subnets as per requirement and distributed them as groups into various availability zones of the VPC.
- Used IAM for creating roles, users, groups and also implemented MFA to provide additional security to AWS account and its resources.
- Possess good knowledge in creating and launching EC2 instances using AMI's of Linux, Ubuntu, RHEL, and Windows and wrote shell scripts to bootstrap instance.
- Environment: AWS (EC2, VPC, ELB, S3, EBS, RDS, Route53, ELB, Cloud Watch, CloudFormation, AWS Auto Scaling, Elastic BeanStalk), GIT, SQL, Jira, AWS CLI, Unix/Linux, Shell scripting, Jenkins, Ansible, Terraform, Nginx, Tomcat.
- Written Templates for AWS infrastructure as a code using Terraform to build staging and production environments.
- Implemented domain name service (DNS) through route 53 to have highly available and scalable applications.
- Development of CI/CD pipelines for automated application deployment's (Pipeline as code) within Jenkinsfile hosted in Git repository.
- Utilization of Terraform for automated infrastructure deployments (AWS ELB, AWS EC2, AWS Security Groups, AWS VPC, AWS Key Pairs, AWS IAM etc).
- Installation of packages, and server configuration via an automated process/tool (Ansible).
- Configuration of Route53 for DNS solution with Terraform.
- Working with Python SDK's to perform manipulation of S3 Buckets, and objects (Creation, upload, and deletion).
- Integrating Microsoft Active Directory Federation Services and AWS with SAML for SSO.

Globacom Nigeria Limited | Nigeria
Linux/Unix Systems Engineer

□ 08/2015 - 12/2016

-
- Created and managed user/group accounts, password and setting up permissions.
- Utilizes the VI editor in accessing file contents and securely modifying them to meet specific objectives.
- Configuration & mounting of NFS as well as managing SAN and NAS servers.
- Configured storage-area network (SAN) switches and implementing fabric topology for zoning and masking of the SAN Switch.
- Upgraded memory, installed patches and updates to Linux/Unix servers.

Primera Africa Finance Group | Lagos, Nigeria
Linux/Unix Systems Administrator
08/2012 - 08/2015

- Building & configuring Red hat Linux/Unix systems over the network, implementing automated tasks through crontab, resolving tickets according to the priority basis.
- Installation of Oracle Patches and Troubleshooting, Creating and modifying application related objects, Creating Profiles, Users, Roles and maintaining system security.
- Handled the Installations and Deployments of Java based Applications such as Apache Tomcat, Oracle 12c, JBOSS and other middleware software's on our development environment using Linux/Unix platform.
- Defined and Implemented CM and Release Management Processes, Policies and Procedures.
- Scripting on Linux, Unix and Windows Servers..

PRIMERA AFRICA FINANCE GROUP

Desktop Support

06/2010 - 07/2012

- Responded to requests for **technical** assistance in person via phone and remotely for the following **technologies**: Windows and Mac OS based end points (Laptops Desktops & Thin Clients), Tablets & Smartphones (IOS & Android), and **Microsoft Office**.
- Assisted the Help Desk Manager in supervision, training, and mentorship of student employees at the Help Desk, with a specific focus on leading the team of Desktop Support Referral student employees who also contribute to tier 2 ticket resolution.
- Continually updated personal knowledge of computing hardware operating systems and **software**.
- Maintained confidentiality and discretion when working with passworded or sensitive materials.

Education and Training

Lagos State University (LASU) | | Lagos, Nigeria

B.Sc. (Hons) in Computer Science

01/2012

2nd Class (Upper Division)

Nigerian Institute of Information Technology (NIIT)

05/2010

Kings **High** School, West African | | Lagos, Nigeria

Senior School Certificate

01/2001

Certifications

Excellent communication, interpersonal, analytical and presentation **skills**. Linux Engineering Training - (2009 Certified). AWS Certified Solutions **Architect** - Associate Level.
