Jonny.D.Quigley@gmail.com

Education

Massachusetts Maritime Academy

Bachelor of Science, Facilities and Environmental **Engineering** Degree-May 2008-2012 Bourne MA, 02532

Employment History

C3 **Engineering**

Lead CQV **Engineer** (May 2018-Present)

My duties as Lead **Validation/CQV Engineer** include the **development** and implementation of **Validation Master Plans (VMP)**, User Requirements Specifications (**URS/UFRS**), Risk Assessments, **Test Protocols, FAT/SAT, Summary Reports, Trace/CAL Matrixes,**

SOPs, Design Qualification (DQ), Installation Qualification (IQ), Operational Qualification (OQ), Performance Qualification (PQ), Good Automated Manufacturing Practice (GAMP), Current Good Manufacturing Practice (cGMP) Review, Continued Process Verification (CPV). Once test data confirms **Process Qualification completion, CPV Plan** development is discussed and roles/strategy are established to maintain continuous validated state. When required, I execute trackwise **deviation investigation (Root cause), CAPA and Change control** in accordance to 21 CFR part 11, 21 CFR Part 211, 21 CFR Part 50, 21 CFR Part 56, and 21 CFR Part 58, 210, 820. Each project is continuously guided by regulations ASTM E2500-20, ICH Q11; among many references.

Notable clients include

SERES THERAPEUTICS, CRISPR and several undisclosed.

Notable equipment include (varying levels of involvement)

Aseptic processing: Filling line (washer, tunnel, filling machine, isolators), CIP (Clean-In-Place) and SIP (Sterilization-In-Place, magazine handling unit, Tank TCM-Temperature control module), isolator conventional and non- conventional, **sterilizers, lyophilizer, SIP and CIP systems.**

Packaging equipment including bar code vision systems and labelers,

Laboratory systems:

Stability chambers, cold rooms, particle counters, **filter integrity testers**, microbial identification units, heat sealer, precision weighing, LIMS and **HPLC.**

Utilities: **WFI and purified water systems, HVAC, compressed air and inert gases, clean steam, nitrogen, and**

DCM networks.

Pharmaceutical Equipment: Washer, Tunnel, Filling machine, Isolators, Magazine handling Unit, Labeling machine, Heat sealer, Autoclave, Containers for isolators, RTP and Hoover, Lyophilizer, HVAC equipment, Heat exchangers, bioreactors, fermentors.

Horizon Engineering

Commissioning Engineer (Apr 2016-May 2018)

I act a liaison **engineer** between Horizon commissioning and Frank I Rounds joint **engineering** ventures. I help **design** engineers and architects from OPR and FTP **development** through to occupied testing; all the way from conception to completion. Building systems commonly include ERU, DX, RTU, EF, FCU, Boilers, Chillers and associated equipment/sensors integrated within a central BMS. I work on field **validation** of equipment, most notable combustion

turbine commissioning and HRSG commissioning. I ensure that all equipment operates and is commissioned to the spec for which it was designed.

Frank I, Rounds Company

Hydronics Specialist (Dec 2014-Apr 2016)

As the only Hydronics Specialist at Frank I. Rounds, I consult with **Design** Engineers on technical recommendations related to hydronics. I oversee the implementation of skid mounted package systems for the use in heating and cooling loops. I also serve as a resource liaison between OEM, contractors and **design** engineers to best size and **design** each project to maximize efficiency.

Working alongside Fulton, Cleaver Brooks and FloFab, I served as a regional expert in hydronics solutions.

Miura Boiler North America

Senior Field **Engineer** (Sep 2013-Dec 2014)

In my first **Senior Engineering** position, I have managed and conducted all **engineering** aspects of Miura Boiler activity in the **New England** region. Working and coordinating along with contractors, have overseen the preventative maintenance, emergency maintenance, start-up commissioning, decommissioning and State/insurance inspection on every Miura boiler in the northeast. Along with my responsibilities as a Field **Engineer**, I run the Boston office in regards to personnel **management**. Daily tasks would include water treatment **management**, **design** and improvement implementation and interfacing with clients on an individual basis.

RockTenn inc. (Corrugation packaging contract) Maintenance Engineer (July 2013-Sep 2013)

As the lead steam and environmental **engineer**, I play a pivotal role in the operations and preventative maintenance on wastewater and corrugation systems. Daily tasks include PLC programming/troubleshooting, emergency maintenance on process equipment as well as maintaining statistical process control aspects of the packaging process. Along with maintaining automated inspection processes, I serve as the lead commissioning **engineer** in the **design** and **validation** of **new** equipment implementation.

Practical Applications inc.

Mechanical Engineer (March 2013-July 2013)

Specializing in the **design**, fabrication and implementation of industrial systems for hospitals and pharmaceuticals. Working with a small team of engineers, each person have to be well versed in all aspects of electrical, **mechanical** and chemical **engineering**. After the installation of systems, we perform preventive maintenance projects along with **mechanical** repairs for each client.

Tradebe Environmental Industrial Wastewater Operator, (June 2012 March 2013) Using chemical processes and polymer/flocculation techniques, I treat and separate volatile chemicals and heavy metals in industrial waste for discharge to conventional treatment stages. Requiring firm grasp of all **engineering** applications; proficiency shown in critical thinking and operations maintenance.

Semiconductor Processing Company

CO-OP Engineer (June-Aug 2011, '12/Winter '12)

Managed semiconductor **manufacturing** focusing on **quality assurance** and maintenance of systems. Assisting main **engineering** team with **design** and implementation of cyanide injection processes. Operations and preventative maintenance incorporated a crucial component of my expertise.

Building Commissioning Expertise

Mechanical: HVAC, Chilled water, Hot water (DHW/Cond Boiler), Steam, Piping, Plumbing. Electrical: Generators, Switchgear/transformers, UPS systems, Grounding/bonding, Lighting/Occupancy and lighting control, Photovoltaic, Electrical metering Fire & Life Safety: Fire suppression/stair pressurization, Fire alarms. Integrated Systems: **Building automation. (BMS/BAS), Direct digital controls (DDC), SCADA.** Specialty Systems: Security, Voice/data, Automated **manufacturing**, Nurse call, Wastewater treatment, Fuel cells, Renewable energy, Vertical and horizontal Transport, **Combined heat and power (CHP).**

Building Envelope: Wall assemblies, Fenestrations (windows and doors), Roof Construction, Waterproofing

Automation

Honeywell Comfort

Point, Siemens

Desigo/Synco,

Johnson **Controls**

Metasys, Schneider

Electric EcoStruxure.

PLC/Automation

programming,

proficiency in

Microsoft Office.

Extremely proficient in the understanding of Schedules/Schematics/**Plans development.**

Capable of 3-D AUTOCAD and Solidworks/Revit designs. Very capable of autonomous Excel FTP/OPR/CP **development.**

Computational Fluid/thermodynamic modeling (ThermoCalc CALPHAD, Ansys Fluent)

Awards

State Champion (1 mile), 1 time All-American, Division II Distance Medley relay (mile leg).
