CAREER HIGHLIGHTS

Information Security Analyst | Primerica Duluth, GA

June 2021 - Present

Provide information security and controls to Primerica employees and systems, conduct vulnerability assessments, perform testing on security controls, and deliver recommendations to aid businesses in maintaining compliance with PCI and ISO 27001 standards. Serve as the point of contact of IT security functions, including access management, endpoint protection, and cloud security.

Key Initiatives:

- Monitor, document and implement security modifications in distributed and mainframe environments
- Performs daily administration of information security on distributed AIX, Linux, Windows, LDAP and Mainframe systems as directed
- Maintains the security infrastructure following best practices while maintaining a high level of availability and ease of user access
- Analyzes information security requests and provides solutions as directed
- Perform security administrative task utilizing IAM, Okta, AD, Microsoft Azure, RADIUS, SAML, RSA
- Works with end users to ensure understanding of and adherence to established data and computer security policies
- Assists with troubleshooting of applications and infrastructure, related to security technology
- Use ticketing systems as directed to manage work effort and participates in technical projects as a task or sub-project owner
- Coordinate with the IT Director and security teams to develop and maintain IT security policies, architecture, and security across the organization, including performing audits of security systems to maintain compliance with standards and protocols and best practices
- Lead the development and implementation of security requirements for various IT projects, including system migrations to compliant environments
- Served as the point of contact for all aspects of information security, including access management, endpoint protection, cloud security, and PCI compliance
- Analyze risk profiles and conducting due diligence of 3rd party relationships regarding information flow
- Developed security plans for technology implementations, coordinated with the IT department to create security controls, and performed audits to ensure compliance
