

Ken Ngoje
ngokenn1@gmail.com
(732)766-9410

IT professionals with over 13+ years of experience in software development, technical leadership, and production support. I am highly skilled in Java/JEE, Spring Boot, Microservices, REST APIs, Node.js, AWS, Kafka, Docker, Kubernetes, and CI/CD pipelines. Proven ability to lead cloud migration projects, design scalable enterprise systems, and collaborate in Agile environments.

SKILLS

Languages: Java 18, Angular, React J, JQuery, AJAX, PL/SQL, UML, E Standards, J2EE Design Patterns, JSP 2.0, Servlet, Hibernate, Spring, Spring Boot, Spring MVC, EJB, JNDI
Web Technologies: JSP, Servlets, HTML, CSS, HTML, CSS, Java Beans, HTML, XML, XLST
Database: Oracle, SQL, MYSQL, DB2, MongoDB
Cross Platform: RST, SOAP, XML
Web/App Servers: Apache Tomcat, Weblogic, IBM WebSphere App Server, Nginx, OpenShift
Cloud: AWS and GCP

EDUCATION

New Jersey Institute of Technology (NJIT) – Martin Tuchman School of Management, Newark, NJ
Master of Business Administration (MBA)-Technology & Business Management: May 2013

New Jersey Institute of Technology (NJIT) - Newark College of Engineering, Newark, NJ
Bachelor of Science, Computer Engineering (BSc. Comp. Eng.): Aug 2003

CAREER EXPERIENCE

Knoville, North Brunswick NJ 3/2023– 04/2025

Role: Solution Architect /Java Technical Lead

- Translated business requirements to technical requirements.
- Performed application modeling UML use case diagram, class diagram, and sequence diagram.
- Established solutions to specific business requirements. Managed stories/tasks and workload to the developers
- Played active role in scrum ceremonies-sprint planning, Daily Stand-up (Daily Scrum), Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)
- Ensured that technical design principles and process were followed.
- Configured and managed EC2, Cloud Watch, Cloud Trailers and S3
- Leveraged AWS, Docker, Kubernetes and Ansible Playbooks in the microservices application development.
- Improved performance of the application through the implementation of SOLID design principles.
- Implemented CI/CD pipeline through Jenkins for the integration, delivery and deployment process.
- Used React.js for creating UI one-way data flow, virtual DOM, JSX and React native.
- Leverage React component library-Forms, Events, Keys, Router, Animations, Flux, React-Autocomplete
- Leveraged TOGAF principles in the Design. Used Redis Distributed Cache to store frequently accessed data.
- Increased retrieval of data from the MongoDB with Redis Cache
- Created an application architecture for microservices.

Environment: JAVA (8,11,13,17),AWS,React JS,Java 11,Spring Boot 3.3.1,Redis 7.X.X,Terraform 1.3.x,Oracle Client 19.3.0, Oracle SQL Developer 21.4.2, Angular 14, MongoDB 5.0, Docker, Kubernetes, OpenShift, Maven 3.8.1, Git 2.35.1.2, Gradle 4.10.2, Node.js 18.X.X,CI/CD Pipeline, IntelliJ Idea 2022.1, Putty 0.76.0.0, WinSCP 5.19.2, Postman 9.1.5, JIRA 8, Confluence, JDK 1.8.0(JAVA 8), Bitbucket 7.21.0, Artifactory, Sonar, Jenkins, TeamCity Fortify, Cygwin, ServiceNow, Cucumber, Selenium, CloudWatch, Zoom Client for VDI 5.9.20720, 7 -zip 21.06. TypeScript

**Deutsche Bank, Cary-NC
(HCL Contractor)**

1/2022– 8/2022

Role: Senior Technical Lead/Java Developer

- Performed website tuning-from the uses-cases, UML diagrams, development, and testing before deployment.
- Integrated the application between the front end (Angular) and the backend (including the MySQL database)
- Used Dynatrace to analyze the health of the application performance.

- Pivotal **Cloud** Foundry (PCF) and Google **Cloud** Platform (GCP) in the **cloud** development service.
- Developed and maintained GCP documentation application.
- Used Java 11 to/from files and completable feature in the development.
- Deployed **data** ingestion pipeline on GCP using Dataflow and **Cloud** Pub/Sub
- Attended internal full stack e-commerce website development training: pagination, the shopping cart, the checkout form (including event handling process), cascading dropdown list (for region and country) and stripe payment processor into the e-commerce application.
- Created AWS
- Used **OpenShift** platform to manage containers -**Kubernetes** Clusters
- Worked on **Jenkins** CI/CD pipelines for the **integration**, **delivery** and deployment process.
- Created Typescript reusable components and services for the REST APIs
- Used **yaml** scripting in developing **OpenShift** classes.
- Developed BDD tests using Cucumber, through writing behaviors and steps definitions, and Cucumber Selenium support codes.
- Used AWS CloudWatch for monitoring AWS **cloud** resources through the CloudWatch alarm notification services.
- Leveraged Angular 14 components, forms, modules, directives, reactive form.
- Configured private and public keys for communication between IntelliJ idea and Bitbucket, created Feature branch, Dev branch, developed codes, pull, push, and commit the codes in development process.
- Configured the CI/CD pipeline for the project.

Environment: Oracle Client 19.3.0, Java 11, Oracle SQL Developer 21.4.2, Terraform 1.3.X Angular 14, MongoDB 5.0, Docker, **Kubernetes**, **OpenShift**, Maven 3.8.1, Git 2.35.1.2, Gradle 4.10.2, Python 3.11.X, Node.js 18.X.X, IntelliJ Idea 2022.1, Putty 0.76.0.0, WinSCP 5.19.2, Postman 9.1.5, JIRA 8, Confluence, JDK 1.8.0(JAVA 8), **OpenShift**, Bitbucket 7.21.0, Artifactory, Sonar, **Jenkins**, uDeploy, TeamCity, Cygwin, ServiceNow, Zoom Client for VDI 5.9.20720, 7 -zip 21.06. TypeScript TDD and BDD

Verizon, Remote (Richardson, TX)

3/2020– 8/2021

(Infosys Employee) Role: Java Technical Lead

Attended to the customers' requirements on the application and shared it with the rest of the developers.

- Simplified technical requirements of the application to the **customer**.
- Developed modeling of use case diagram, class diagram, and sequence diagram using UML program.
- Managed stories/tasks and workload allocation to the developers
- Played active role in scrum ceremonies-sprint planning, Daily Stand-up (Daily Scrum), Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)
- Used Spring Boot with Redis Cache, to speed up **data access**.
- Created **RESTful web services** for the project.
- Created Kafka publish/subscribe cluster with the brokers and topics connected to a spring boot microservices process.
- Developed **JSON data** formats to be supported by **RESTFUL Web Services**
- Implemented **spring security 5.4.1** and **Oauth2** for the **authentication** and authorization processes of the system.
- Provided **production** support, more so in the resolutions of the issues raised on the incoming tickets, revised the capacity of existing infrastructure to increase productivity accordingly.
- Used Redis Distributed Cache to store frequently accessed **data**.
- Performed Performance/**Stress Test using JMeter**.
- Developed microservices applications in adherence to the 12-factor application methodology.
- Created and implemented Kafka producers including bootstrap servers, key serializers and value serializers.
- Created and implemented Kafka producers including bootstrap servers, key de-serializers and value de-serializers.
- Created the Kafka brokers- a parameter of the required key value pairs of setting up the producers and consumers.
- Optimized application services using NodeJS and JavaScript ES6
- Database development with MYSQL
- Worked on SAFe Framework within other SCRUM teams.
- Track Agile metrics within Scaled Agile Framework (SAFe)
- Used **YAML** scripting in developing microservices.
- Tested the framework using JUNIT Mockito
- Used **OpenShift** system to manage containerization (Docker, **Kubernetes**, EC2, Docker Swarm) of applications.
- Implemented Kafka Producer and Consumer applications including its Zookeeper and clusters.

- Implemented Lombok annotations to generate boilerplate code for POJO objects.
 - Used Node.js on the server side and installed necessary packages into the application.
- Developed BDD tests using Cucumber, through writing behaviors and steps definitions, and Cucumber Selenium support codes.

Environment:JDK: 1.8.0(JAVA 8), Eclipse 4.7(Eclipse Oxygen),Redis 6.X.X, **Apache** Kafka Postman 6.1.3, JMeter, GitLab, **Jenkins**, JIRA, Spring Boot, Lombok, Agile, Node.JS 16.X.X, Spring Boot 1.2.2, JUNIT MOCKITO SAFe, **Apache** Kafka, Docker, **Kubernetes**, Angular, Microservices, **OpenShift**, **Amazon** EC2, **Amazon** S3,

FCA, Auburn Hills, MI

6/2019– 2/2020

(TCS Employee) Role: Java Solution Architect/Java Technical Lead

Main Java Developer/Technology Lead for the B2C Marketing developers' team.

- Developed modeling of use case diagram, class diagram, and sequence diagram using UML program.
- Managed stories/tasks and workload allocation to the developers
- Played active role in scrum ceremonies-sprint planning, Daily Stand-up (Daily Scrum), Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)
- Leveraged TOGAF principles in the design. Leveraged SOLID principles in the Microservices and Spring Boot design patterns. Developed RESTful web service using JAX-RS API.
- Performed API documentation and tests using Swagger UI.
- Performed API tests for the RESTful web service using Postman.
- Improved performance of the application through the implementation of SOLID design principles.
- Performed development involving java collections (List, ArrayList, HashMap and HashSet) in developments.
- Developed secure codes that prevent XSS, CSRF and SQL Injection vulnerabilities.
- Used DataPower for application **security** enhancements, which included HTTP to MQ, HTTP to FTP, and MQ to HTTP. Integrated Spring **Security** and OAuth2 to the user login **authentication** authorization
- Configured Blue/Green deployment strategy on creating new applications using CloudFormation strategy.
- Monitored the performance of DataPower applications using Splunk.
- Created MPGWS, WebProxy and XML Firewall in DataPower, as required in the specifications.
- Created deployment scripts using DataPower CLI.Used Splunk to monitor DataPower applications' performances.
- Established SSL connection using DataPower clusters.
- Applied CI/CD pipeline through **Jenkins** frameworks for the **integration**, **delivery** and deployment process.
- Used React.js for creating UI one-way **data** flow, virtual DOM, JSX and React native.
- Leverage React component library-Forms, Events, Keys, Router, Animations, Flux, React-Autocomplete
- Used Spring Webflux for real-time **data** processing and handled non-blocking I/O
- Developed Microservices applications using Spring Boot, Kafka, Docker, and **Kubernetes**.
- Built an application and deployed microservices in the AWS **Cloud** using Docker containers.
- Used **Jenkins** CI/CD Pipeline **integration** automation process in the **integration** and deployment of codes.
- Developed Java APIs on AWS Lambda environment. Worked on receipt generation for POS.
- Developed wrapper in python for instantiating multi-thread application.
- Used GIT and **GitHub** for Version Control and Repository in the development process.
- Developed architectural deliverables and conveyed architectural solutions to the developers and the business.
- Created architectural artifacts.
- Developed BDD tests using Cucumber, through writing behaviors and steps definitions, and Cucumber Selenium support codes. Designed proof of concepts and pilot applications using Adobe Experience Manager (AEM)
- Developed microservices **architecture** using Spring Boot 12-factor application development methodology.
- Used RabbitMQ Message Broker to implement Advanced Message Queue Protocol (AMQP)
- Analyzed issues within the database and fixed them within the SQL database. Tested the application framework using JUNIT Mockito. Implemented highly scalable ELK (Elasticsearch, Logstash and Kibana) stack solutions to analyze log files across different servers.
- Created CloudFormation template for DEV/STAGE/PROD to automate infrastructure, which included CloudWatch alarms, SNS, RDS on click of a button.
- Used AWS CloudWatch for monitoring AWS **cloud** resources through the CloudWatch alarm notification services.
- Used build/deploy tool **Jenkins** for **Continuous Integration** and Deployment for Microservices.
- Used Maven to build, manage and deploy the applications to the development environments.
- Implemented business logic and **data** processing routes using Spring Boot.

- Worked with AWS services like EC2, **S3**, Beanstalk and Lambda.
 - Created AEM components with Custom Dialogs and with cacheable.
 - Led developers across broad with the focus on business objectives and tracking progress to ensure project milestones were completed on time, on budget and with the desired. Used React JS framework to develop SPA.
 - Created UI components using Angular. Used ServiceNow (Drive IT) application to manage the Product Backlogs, Sprint Backlogs, Daily Scrum Stand Up, Sprint Planning and Sprint Retrospectives.
- Worked on SAFe Framework within other SCRUM teams and knowledge of Adobe Experience Manager (AEM 6.3). Track Agile metrics within Scaled Agile Framework (SAFe)
- Performed HTTP debugging of the application system using Fiddler.
 - Interpreted FCA business requirements into technical language and creates Incidents, Demands, Enhancements and Tasks in FCA's Drive IT ServiceNow system. Used Test Driven Development (TDD) in the process.
 - Provided **customer** support for incidents/tickets created in the Drive IT ServiceNow system.
 - Created custom directives and filters using Angular 8.X.X built-in \$http service from controller through dependency injection. Supported critical FCA B2C Marketing applications, ensuring their stability. Performed root cause analysis for service failures and provided resolution.
 - Performed static **security** scans, using IBM **Security** AppScan Source, MQ configuration using DataPower.
 - Participated in Daily Agile/Scrum (Stand Up) meetings. Participated in Sprint Planning, Sprint Retrospectives.
 - Created Product Backlogs and participates in Sprint Backlog prioritization.

J & J Health Care Systems, Piscataway, NJ

9/2018– 6/2019

(TCS Employee) Role: Lead Java Developer

- Senior developer for the system and the main coordinator between the client (Johnson and Johnson, Health Care Systems, Piscataway) stakeholders and the development team.
- Developed modeling of use case diagram, class diagram, and sequence diagram using UML program.
- Led scrum ceremonies-sprint planning, Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)
- Ensured that technical design principles and process were followed.
- Performed follow-up and monitoring with the java developers based on-shore and off-shore.
- Developed Medicaid Contract Activity Tracker System (MCATS) -developed Backend and Middle tier.
- Worked with AWS services like VPC, EC2, **S3**, Beanstalk, Lambda. Performed database jQuery testing, created SQL statements, created stored procedures and performed optimizations using TOAD.
- Analyzed issues within the database and fixed them within the MYSQL database.
- Developed the system using Spring MVC and JSP- AJAX on the presentation layer, Spring on the business layer, the persistent layer was developed using Hibernate.
- Developed RESTful web service using JAX-RS API. The RESTful web service provided all the **CRUD** capabilities.
- Built an application and deployed microservices in the AWS **Cloud** using Docker containers.
- Used **Jenkins** CI/CD Pipeline **integration** automation process in the **integration** and deployment of codes.
- Used GIT and **GitHub** for Version Control and Repository in the development process.
- Leveraged SOLID principles in the Microservices and Spring Boot design patterns in the application development.
- Performed API documentations and tests using Swagger UI for the different modules of the application system applying. Performed API code tests for the Restful web service using Postman.
- Supported regular application release process.
- Created the project's approval documents-Design Specification, Application Risk and **Security** Self-Assessment (ASSA), **Compliance** Analysis (CP), **Compliance** Plan (CP), Business Impact Assessment (BIA), Requirement Specification, Traceability Matrix, **Compliance** Summary and Code Promotion Request Form (CPRF).
- Used **ServiceNow (Drive IT)** application to manage the Product Backlogs, Sprint Backlogs, Daily Scrum Stand Up, Sprint Planning and Sprint Retrospectives.

United Airlines, Chicago, IL

2/2018– 8/2018

(TCS Employee) Role: Java Technical Lead

Developed modeling of use case diagram, class diagram, and sequence diagram using UML program.

- Played active role in scrum ceremonies-sprint planning, Daily Stand-up (Daily Scrum), Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)

- Developed Automated Baggage Claim Form (developed Backend, Middle tier and UI sections) and performed its core support. Developed secure codes that prevent XSS, CSRF and SQL Injection vulnerabilities.
- Fostered and Leveraged SOLID principles in the Microservices and Spring Boot design patterns.
- Developed RESTful web service using JAX-RS API. The RESTful web service provided all the CRUD capabilities.
- Analyzed issues within the database and fixed within the SQL database.
- Created and integrated Hazelcast distributed caches for UI (client)
- Developed the UI modules using Angular 6.X.X, Ajax, JavaScript, HTML and CSS.
- Implementation of the CI/CD pipeline in GitLab/Jenkins
- Developed OAuth 2.0, security and Spring Security for the different services of the application system.
- Performed CSL Client Migration from CSS CSL to Data Power CSL. Performed API Integration End points services from CSS CSL services to Data Power CSL services. Created UI components using Angular.
- Developed microservices architecture using Spring Boot 12-factor application development methodology.
- Developed Java APIs on AWS Lambda environment and used AWS Beanstalk.
- Performed API documentation and tests using Swagger UI for the different modules of the application system.
- Configured Blue/Green deployment strategy on creating new applications using CloudFormation strategy.
- Performed API tests for the Restful web service using Postman. Supported 9 languages translations, applying Unicode equivalents and ASCII texts. Performed HTTP debugging of the application system using Fiddler.
- Used Jenkins CI/CD Pipeline integration automation process in the integration and deployment of codes.
- Used GIT and GitHub for Version Control and Repository in the development process.

Cigna, Windsor, CT
(TCS Employee)

10/2017– 2/2018

Developed dashboard notification system (developed Middle tier and Backend sections).

- Developed status view system displaying the projects trends-work item, work records name, previous testing status and current testing status records. Developed quality view system displaying the defects/blockers- project name, application name, number of critical defects and defect age.
- Developed the UI modules using Angular 6.X.X, Ajax, JavaScript, HTML and CSS.
- Created DDL and DML queries and tested the transmission of their data from the Business layer to the Database.
- Used Jenkins CI/CD Pipeline integration automation process in the integration and deployment of codes.
- Used GIT and GitHub for Version Control and Repository in the development process.
- Used JDBC framework to establish connection with the database.
- Enhanced system performance by integrating Hazelcast in-memory.
- Built the CI/CD pipeline on Jenkins, for the integration process.
- Implemented highly scalable ELK (Elasticsearch, Logstash and Kibana) stack solutions to analyze log files across different servers. Used CloudWatch to monitor stats from the services of the application.
- Performed data migration from Oracle SQL Developer Version 17.2.0 (Oracle 12C) to Microsoft SQL Server 2012.
- Delivered quality code through testing my development codes using JUnit. Developed the controller classes, the persistence classes, the domain classes and the service classes for the Dashboard system. Use java collections (List, ArrayList, HashMap and HashSet) in my developments. Used GitLab for CI/CD

Freddie Mac, McLean, VA
(TCS Employee) Role: Java Developer

10/2016– 8/2017

Developed Loan Batch jobs transaction application system using Spring Batch Framework technologies to execute large number of chunks. Created action classes, Requests/Responses of SOAP webservice elements.

- Fixed system integration testing defects. Developed and tested connections between the cash manager system and the Rapid SQL database. Developed SOAP webservice using JAX-WS API and RESTful webservice API.
- Created DDL and DML queries and tested the transmission of their data between the cash management system/Non-interactive Investor Assignment System using PuTTY and WinSCP technologies.
- Used JDBC framework to establish connection with the database.
- Delivered quality code through testing development codes using JUnit. Developed code and databases queries through using Virtual Desktop Infrastructure (VDI), a VMware technology, for enhancement of data security.
- Use Java collections (List, ArrayList, HashMap and HashSet) in my developments.
- Used Maven to build, manage and deploy the applications to development environments.
- Used GitEye (Collabnet GitEye) for continuous integration and continuous development in the developments.

Caremark, Northbrook, IL

3/2015– 9/2016

(Infosys Employee) Role: Java Technical Lead/Developer

- Performed Architecting of UI screen layout for retail store UI system design. Created an Application **Architect** UI screen layout for retail store UI system design. Created an Oracle SQL Developer trigger to save the history of the retail store **data** updates and edit.
- Created a unique number validation system by creation of UniqueValidatorDMI class (i.e., as server-side validator class) to check for unique constraint. Created single-page applications Angular.js.
- Implemented OAuth2 for **authentication** and authorization web-based **data** processing systems.
- Created **Data** source xml (i.e., DSXML) file for the UI consisting of all the design screen layouts for the UI-**Data** Source ID, field names and value maps, validator types, operation bindings, transition identifications, transition dates, effective dates, expiration dates and much more.

Infosys Employee, Newark, CA

11/2014 – 2/2015

Java Technology **Architect/Lead**

- Responsible for creation of Classes, Class Diagrams, Sequence and Activity diagrams using Rational Software Modeler 7.5 and **Architecture** diagrams using **Microsoft** Visio.
- Architected applications-UML Diagrams for SAR/SAD documents (used **Microsoft** vsio)
- Architected, designed and developed portal Applications, portlets and deployed them to WebSphere Portal Server.
- Configured WebSphere Portal Server and WebSphere Application Server using **LDAP Security**.
- Led team developers, as well-developed applications.
- Created Bill of Materials (BOM) using Oracle Fusion PLM
- Created UML diagrams using **Microsoft** Vision Professional. Designed and created Portal pages for Insurance Benefits and Coverage for different plans.
- Created RESTful web services for the project.

Home Depot, Atlanta, GA

7/2014– 11/2014

(Diversant Contractor) Role: Senior Java Developer

- Developed RESTful Web Services supporting HTTP APIs and JSON **data** formats.
- Developed JSON **data** formats to be supported by RESTFUL Web Services.
- Implemented spring **security** 3.2.5 and OAuth2 for the **authentication** and authorization processes of the system.
- Conducted API tests in the process of resolving issues raised by level 3 **production** support teams.
- Used RabbitMQ Message Broker to implement Advanced Message Queue Protocol (AMQP)
- Worked with hibernate and JPA APIs for CRUD operations.
- Participated in the development of Merchandising, Supply Chain, POS and e-Commerce across several disciplines.

Caremark, Florham Park, NJ

12/2013– 6/2014

(VDart/Genpact Contractor) Role: Java Technical Lead/Developer

- Played active role in scrum ceremonies-sprint planning, Daily Stand-up (Daily Scrum), Sprint Review, Sprint Retrospective, Backlog Refinement (Backlog Grooming)
- Developed and maintained, services-based **architecture**, utilizing IBM Rational Application Developer (RAD) 7.5.5, WebSphere Application Server v6.0 (WAS), Struts 2.2, JSP, servlet.
- Configured WebSphere Portal Server and WebSphere Application server using **LDAP Security**.
- Developed various requests for administrative tasks-WebSphere MQ Connection Factories, Queue Destinations, Listener Ports, URL providers for WAS groups. Integrated WebSphere Portal Server with WebSphere Process Server using SOAP Web Service, Used WS-**Security** using JAX-WS and JAXB.
- Developed Cardholder/Dependents level Maximum Out of Pocket (MOOP) Limit, a Pharmacy Benefits Manager (PBM) Portal for CVS Caremark Client-worked on both UI and backend flows.
- Created and Configured MQ series objects-Queue Manager and Queue Channels.
- Performed the relevant coding and testing on Rational Application Developer (RAD) 7.5.5 and WebSphere Application Server (WAS). Developed EJB3 stateless sessions beans for backend process.
- Applied CVS version control in the developments, Used Ant as the building tool for the project and Maven as the deployment tool for the project. Hosted/participated in Level 3 Web Meetings for the project updates.
- Created detailed Portal Technical **Architecture** of the project, showing detailed Presentation Tier, Business Tier and **Data** Tier. Created the needed Java, JSP and xml codes for the project using JavaScript, jQuery.

- Applied waterfall Model in executing the project analysis, system design, implementation, testing, deployment.
- Created Distributed Message Services using RabbitMQ to allow backed to scale and load balance the messages on the servers.
- Performed JUnit testing and generated JUnit summary reports using ANT Scripts.

Lanning Engineering, Hamilton NJ

8/2010– 11/2013

Role: Java Developer

- Developed base APIs using the SQL queries and JDBC connection for accessing Oracle relational database.
- Enabled the **Security** for WebSphere portal server by installing and configuring the **LDAP** servers.
- Developed SOA/Web Services: Delivered multiple modules using Service-Oriented **Architecture** (SOA), Enterprise Service Bus (ESB), XML, JAXB, SOAP Web service.
- Developed the SOA solution system for exchanging information with Availity using SOAP and Web Services with securely sending a request and receiving response.
- Enabled the **security** for WebSphere portal server by installing and configuring the **LDAP** server on Spring **Security**.
- Used AJAX DWR (Direct Web Remote) Framework (HTML, JavaScript, Bean and Logic) for Executing Client request. Performed JUnit testing and generated JUnit summary reports using ANT Scripts.
- Developed base APIs using the SQL queries and JDBC connection for accessing Oracle relational database.
- Worked on spring technologies, Core, Spring Transaction **management**, Spring AOP, Message driven POJO.
- Developed DAO object for **Data** Connection and Database Operations.
- Developed XML utilities and Interfaces using SAX and DOM parsers.
- Deployed the EARs and WARs in WebSphere Application server using ANT script.
- Involved in debugging codes, generated JUnit summary reports using ANT Scripts.
- Used JavaScript for adding dynamic web content to webpages and perform client-side validations.
- Used Test Driven Development (TDD) in the projects.
- Implemented various web applications using Java, JSP Spring and Web Services using RAD and WebSphere.
- Wrote Servlets to communicate with database for **data** retrieval using JDBC API.
- Involved in the creation of RESTful Web Services supporting HTTP APIs and JSON **data** formats.
- Developed JSON **data** formats to be supported by RESTful Web Services.
- I worked extensively on applications using spring technologies like Spring Core, Spring Transaction **management**, Spring AOP and Spring MVC.

Ken Ngo
