

## **Ibrahim Maga**

Email: [imaga75@hotmail.com](mailto:imaga75@hotmail.com), Phone: 2068415266

### **Summary:**

- Experience Azure DevOps Engineer and in Web/Application Development and Architecture working on Azure Cloud technologies.
- Azure DevOps Engineer and Software Developer with Data driven application and Object-Oriented Programming using C#, .Net and Visual studio.
- Implemented and maintained multi-stage Azure DevOps pipelines for application build, test, and release across various environments.
- Microsoft fast Product owner
- GitHub Actions, GitHub workflows, GitHub Management Board and GitHub Security and dependencies.
- Implemented SonarCloud in cloud-hosted repositories for continuous static analysis, facilitating multi-repo scanning, cloud-based reporting, and developer feedback loops.
- Implemented Bicep-based IaC templates to provision and configure Azure PaaS resources, including Azure Functions and Azure SQL, with full version control in Git.
- Managed Azure SQL Database deployments, including automated schema migrations, performance tuning, and backup strategies through DevOps pipelines.
- Established and maintained secure, compliant infrastructure aligned with ASV (Approved Scanning Vendor) scanning requirements and remediation processes.
- Implemented and maintained multi-stage Azure DevOps pipelines for application build, test, and release across various environments.
- Configured and integrated SonarQube with Azure DevOps pipelines for on-premises code quality scanning, enabling custom quality gates, security rule enforcement, and trend analysis.
- Proficient in Azure DevOps and Jenkins, Software Management and build automation.
- Expert in Data Analysis using MS SQL, Cosmos DB, Excel, Tableau, and Knowledge of R. Android mobile app development; Responsive web development with Bootstrap.
- Delivered cloud infrastructure that adhered to ASV vulnerability scanning benchmarks and implemented timely remediation.
- Provided a detailed enterprise architecture plan, recommendations, and strategies.
- Proficient in clinical applications management and configuration. Microsoft Azure Operation and Live Site Management.
- Created custom monitoring dashboards in Application Insights and Azure Monitor for proactive alerting and diagnostics.

- Single Page website with React: <http://vague-chain.surge.sh/>
- LinkedIn Profile: <https://www.linkedin.com/in/ibrahimmaga75/>
- Microsoft open-source project: [microsoft/fast: The adaptive interface system for modern web experiences. \(github.com\)](https://github.com/microsoft/fast)
- Ashcare project: <https://www.ashcare.com/>
- Portal ashcare for virtual physical therapy: <https://portal.ashcare.com/landing>

### **Professional Experience:**

#### **American Specialty Health**

**December 2021 – current**

#### **Sr DevSecOps I**

- Built and maintained CI/CD pipelines in Azure DevOps for application build, test, and deployment.
- Monitor, alerts, security and dashboarding
- Monitored system performance using Azure Monitor, Application Insights, and Log Analytics.
- Implemented Dynatrace for the team, checkmark tool, Snyk.
- Admin for Dynatrace S
- Infrastructure as code using Terraform, Bicep
- Azure DevOps backlog and sprint management
- WSR (weekly service review) to decide which service needs to be improved.
- Application life cycle management featuring agile methodology
- Deployment management and support

- Created advanced dashboards in Azure Monitor and Application Insights to visualize health metrics and troubleshoot application performance issues.
- Creating detailed design and implementation plans, peer dependencies and collaborations, partnering with Solution Architecture Group to resolve issues as needed.
- Document present design for Architecture Review Board.
- Integrated SonarQube for static code analysis and quality gate enforcement.
- Provided a detailed enterprise architecture plan, recommendations, and strategies.
- Security review before deploying resources.
- Collaborated with cross-functional teams to streamline DevOps workflows and enforce governance.
- Support ongoing development for old and new applications
- DevOps Solution Architect
- Scripting language C#, PowerShell, Azure Cli and Bash for automation
- Kusto queries
- Ensured compliance and security by aligning with ASV scanning and remediation requirements
- Automated Azure resource deployment using Bicep scripts and Infrastructure as Code (IaC) best practices Applications Insight and Dynatrace configuration and tooling
- Integrated SonarCloud into CI/CD pipelines to ensure continuous code quality checks, static code analysis, and compliance with security standards.
- Docker, Kubernetes
- Linux, Unix, Windows, IIS, Nginex
- Scripting language C#, PowerShell, and Bash.
- Azure storages, Azure Data Lake, Azure Databricks, Power BI
- Medical device experience is preferred.
- Experience developing any of HITRUST, HIPAA, SOC2, SOX, PCI standards.

## **Microsoft**

**March 2020 – current**

### **Infrastructure Engineer & Azure DevOps**

- Engineered Infrastructure as Code (IaC) environments using Bicep scripts, enabling repeatable and version-controlled deployments of Azure PaaS workloads.
- Microsoft Edge Technology
- Azure backlog and sprint management
- AVD: desktop on azure, accessing those require may require Azure Active Directory. It supposed to be secure.
- Azure Infrastructure experience: Azure SQL, Networking, Storage, Kubernetes, ARM template, webapp
- Orchestrated automated provisioning of Azure Functions and Azure SQL instances for microservices and serverless architectures.
- Cosmos DB and SQL Database
- Infrastructure as code using ARM template, Terraform, Bicep
- CI/CD and agile development process
- Configured SonarCloud for cloud-based projects, enabling cross-repository code quality monitoring and seamless integration with GitHub and Azure Repos.
- Azure DevOps to maintain Agile development process using Azure DevOps, GitHub, TeamCity
- Microsoft Edge project
- Dynamic 365 Operations Enterprise Apps, Logic App, Power Apps. SharePoint Application
- ICM (incident management) tools to keep track of failures in the development process and production.
- Jarvis has insight into all running services and health monitoring.
- Alerting, when the service is dropping in SLA, out of memories CPU, etc.
- WSR (weekly service review) to decide with the team which service needs to be improved.
- Deploy packages to NPM
- Deploy NuGet packages for Blazor support in visual studio
- Creating detailed design and implementation plans, peer dependencies and collaborations, partnering with Solution Architecture Group to resolve issues as needed.
- Document and present design to Architect Review Board.
- Integrated SonarQube into on-premise Azure DevOps pipelines for static code analysis, enforcing quality gates and detecting vulnerabilities early in the SDLC.
- Provided a detailed enterprise architecture plan, recommendations, and strategies.
- Create TSG; documentation that allows developer to follow the step to troubleshoot or complete an assignment.
- Kusto queries

- Docker
- Kubernetes
- Linux, Unix, Windows
- Scripting language C#, PowerShell, and Bash.
- Azure storages, Azure Data Lake, Azure Databricks, Power BI

### **Kaiser Permanente**

**October 2019 – March 2020**

#### **Sr Software Engineer/DevOps**

- Designed Azure Functions for event-driven automation, background processing, and lightweight API endpoints to enhance application performance and scalability.
- Enterprise Incident Management
- Enterprise Problem Management
- Managed Azure SQL database lifecycle, including automated schema migration scripts, performance tuning, failover configuration, and scheduled backups via pipelines. Enterprise Configuration Management
- Enterprise Release Management
- Collaborated with developers, QA engineers, and security teams to align DevOps workflows with quality, compliance, and delivery objectives.
- Production Support
- MS SQL database, Cosmos DB, create tables, Views and Stored procedure.
- SSIS packaging, SSRS with data driven Subscription.
- Asp.Net MVC, Asp.Net Core, RESTful Web API, entity framework
- Architecting and developing next version of applications. Code refactoring for better performance and compatibility.
- Database tuning for better performance
- Build tools and deployment (Azure DevOps, Jenkins, Docker, Kubernetes, Terraform, Application Insight and Azure cloud)
- Build applications that support Healthcare Insurance, Manage Doctors and Care Sites and provide Data to business teams.
- Team group of 10.

### **Microsoft**

**June 2019 – October 2019**

#### **Software Engineer/DevOps**

- Build ICM tools to support customer user experience (CXP ADMIN) for office 365.
- MS SQL database, create tables, Views and Stored procedure.
- Build Data driven reports that will only send email when data condition is met.
- Build website using ASP.Net Web Forms, CSS, HTML, Ajax, JavaScript, Bootstrap and JSON. Rest API, Entity framework
- Architected and developed the next version of applications. Created responsive web applications. Create Web API / REST API applications supporting in-house platforms third parties.
- Scaling web application with Load Balancer technique and resolve bottlenecks with asynchronous. And deploy to multiple environments to ensure site accessibility.
- Build C# application that will collect data from different tables, and after applying some logic then will store it into a new table.
- Cloud Azure, Azure Cosmos DB, Azure web Jobs and Kusto Query.
- Azure DevOps. Take project from start to production deployment to respond to customer facing application.

### **Northwest Kidney Centers**

**March 2008 - May 2019**

#### **Net Developer/DevOps (Full Time)**

- Preceptor for clinical software training for new employees.
- Working on web apps to help patients make better choice with their diet. Monitor application performance that is hosted on Azure. Give feedback on application performance on project.
- Managed Azure subscriptions, Virtual Machine, WebApp, SQL Database and Kubernetes clusters
- Used SQL, Cosmos DB, Entity framework to create Database that track patient appointments, doctor they will see, location for treatment, and time to check in and check out.
- Used SQL to create Database to hold information's of patient electrolytes level (phosphorus, potassium, sodium, calcium), and information about common food we eat.
- Architected and developed the next version of applications. Created Web API / REST API applications supporting in-house platforms third parties.
- Provided enterprise architecture plan, recommendations, and strategies.
- Use C# to build Data model with MVC framework connect to existing databases.

- DevOps: create and pull Docker images, Create web App for containers, Continuous integration with GitHub or TFS in visual studio. Continuous deployment with VSTS (configuring artifacts, enable CI trigger, configuring the environment). Run the CI & CD pipelines.

**Other Skills:**

- Fluent in English and French and 3 more other languages
- Preceptor role at Northwest Kidney Centers.
- Excellent communication and presentation skills
- Reliable and able to finish projects within time constraints.

**Education:**

- Bachelor's degree in computer science, Renton Technical College, WA
- Master's in data science WGU
- Azure and DevOps Training by Edureka
- Terraform Certification
- Microsoft AZ 300 certification, Microsoft Azure Expert AZ 303 certification
- Microsoft AZ 400 certification
- Incident Management Certification at Kaiser Permanente
- Problem Management Certification at Kaiser Permanente
- Release Management Certification at Kaiser Permanente
- Change management Certification at Kaiser Permanente
