

VIKAS DOSHI

AWS CLOUD ENGINEER & ARCHITECT | DEVOPS SPECIALIST

Phone: 732-875-8947

Email: contact.vikas.doshi@gmail.com

Status: Green Card

Location: New Jersey, USA

LinkedIn: linkedin.com/in/vikas-doshi

PROFESSIONAL SUMMARY

Extraordinary AWS Cloud Engineer and Architect with 13+ years of hands-on experience in DevOps engineering, cloud infrastructure automation, and enterprise-scale system architecture. Expert in modern DevOps toolchains including Harness, GitOps workflows, GitLab CI/CD, Jenkins, and Infrastructure-as-Code implementations. Proven track record of designing and implementing scalable, secure, and cost-effective cloud solutions that drive digital transformation and operational excellence across Financial Services, Pharmaceutical, and Telecommunications industries.

Recognized leader in containerization technologies, Kubernetes orchestration, and cloud-native application deployment. Exceptional expertise in automating complex CI/CD pipelines, implementing GitOps methodologies, and establishing DevSecOps practices that ensure rapid, reliable, and secure software delivery. Demonstrated ability to reduce deployment times by 90%, improve system reliability to 99.99%

uptime, and optimize cloud costs by 60% while maintaining enterprise-grade security and compliance standards.

CORE TECHNICAL EXPERTISE

Cloud Platforms & Services:

Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft Azure | EC2, EKS, ECS, Lambda, S3, RDS, VPC, IAM, CloudFormation, CloudWatch, Route53, ALB/NLB, ECR, KMS, Secrets Manager, Systems Manager, Config, Security Hub

DevOps & CI/CD Tools:

Harness, Jenkins, GitLab CI/CD, GitHub Actions, AWS CodePipeline, CodeBuild, CodeDeploy, Azure DevOps, CircleCI, Travis CI, Spinnaker, Argo CD, Flux, Tekton, Bamboo

GitOps & Version Control:

GitOps Workflows, GitLab, GitHub, Bitbucket, Git, ArgoCD, Flux, Weave GitOps, Rancher Fleet, Helm, Kustomize, Git Hooks, Branch Protection, Merge Request Automation

Container Orchestration & Kubernetes:

Amazon EKS, Google GKE, Azure AKS, Kubernetes, Docker, Helm, Kustomize, Pod Security Standards, RBAC, Network Policies, Ingress Controllers, Service Mesh (Istio, Linkerd), Cluster Autoscaler, Karpenter

Infrastructure as Code (IaC):

Terraform, AWS CloudFormation, Pulumi, Ansible, Chef, Puppet, Vagrant, Packer, Terragrunt, Terraform Cloud, HashiCorp Vault, Consul

Monitoring & Observability:

Prometheus, Grafana, Datadog, New Relic, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Container Insights, AWS X-Ray, Jaeger, Zipkin, Fluent Bit, Fluentd

Security & Compliance:

DevSecOps, AWS IAM, IRSA, KMS encryption, AWS WAF, GuardDuty, Security Hub, Config Rules, CloudTrail, Vault, SAST/DAST tools, Snyk, Aqua Security, Twistlock, OPA/Gatekeeper

Programming & Scripting:

Python, Bash, PowerShell, YAML, JSON, Go, Node.js, Java, Groovy, Ruby | AWS
SDK/CLI, BOTO3, REST APIs, GraphQL, Microservices Architecture

Databases & Storage:

PostgreSQL, MySQL, Redis, ElasticSearch, DynamoDB, Aurora, RDS, S3, EBS, EFS, CloudSQL, Azure SQL, MongoDB, Cassandra

Networking & Load Balancing:

VPC, Subnets, Security Groups, NACLs, VPN, Direct Connect, PrivateLink, ALB, NLB, CloudFront, Route53, DNS, SSL/TLS, WAF, Shield

PROFESSIONAL EXPERIENCE

Senior AWS Cloud Engineer & Architect

JP Morgan Chase & Co. | March 2023 – Present | New Jersey, USA

Advanced DevOps Engineering & Automation: - Architected and implemented enterprise-scale DevOps pipelines using Harness for continuous delivery, reducing deployment time from 4 hours to 15 minutes across 200+ microservices - Designed and deployed GitOps workflows using GitLab CI/CD and ArgoCD, enabling automated application deployments with 99.9% success rate and instant rollback capabilities - Built sophisticated Jenkins pipelines with Groovy scripting for multi-environment deployments, integrating automated testing, security scanning, and approval workflows - Implemented Infrastructure-as-Code using Terraform and AWS CloudFormation, managing 50+ AWS accounts with standardized, reusable modules and automated compliance checks - Established DevSecOps practices integrating security scanning tools (Snyk, Aqua Security) into CI/CD pipelines, achieving 100% vulnerability remediation before production deployment

Amazon EKS & Kubernetes Excellence: · Designed and deployed scalable Amazon EKS clusters across dev, test, and production environments using modular Terraform configurations with GitOps deployment patterns · Implemented IAM Roles for Service Accounts (IRSA) and Kubernetes RBAC policies for secure, least-privilege access control across 50+ namespaces and 15+ development teams · Hardened EKS clusters using

Pod Security Standards, network policies, KMS encryption, and integrated security scanning with automated remediation workflows · Automated complete EKS lifecycle management using eksctl, Terraform, and custom automation scripts, including zero-downtime rolling upgrades and node group management - Integrated EKS with comprehensive AWS services ecosystem including CloudWatch Container Insights,

AWS Load Balancer Controller, and Cluster Autoscaler for optimal performance - Deployed workloads using Helm charts and Kustomize with GitOps patterns, managing 300+ application deployments with automated rollback and canary deployment strategies - Configured advanced networking using VPC CNI, Calico network policies, and AWS Load Balancer Controller for secure, high-performance application communication - Implemented comprehensive observability using Prometheus, Grafana, and AWS Distro for OpenTelemetry (ADOT) for full-stack monitoring and alerting

Cloud Architecture & Infrastructure Optimization: - Designed multi-region, highly available AWS architectures supporting \$10B+ daily transaction volumes with 99.99% uptime SLA requirements - Implemented advanced auto-scaling strategies using Cluster Autoscaler, Karpenter, and Spot instances, optimizing compute costs by 60% while maintaining performance standards - Architected serverless solutions using AWS Lambda, API Gateway, and EventBridge for event-driven microservices architecture with sub-100ms response times - Established comprehensive disaster recovery and business continuity solutions with automated failover capabilities and RTO/RPO targets under 15 minutes - Designed and implemented multi-account AWS organization structure with centralized logging, monitoring, and security governance using AWS Control Tower and Config

Security & Compliance Leadership: - Implemented zero-trust security architecture with comprehensive IAM policies, encryption at rest and in transit, and automated compliance monitoring - Established security scanning and vulnerability management processes using AWS Security Hub, GuardDuty, and third-party tools with automated remediation workflows - Achieved SOC2, PCI DSS, and SOX compliance across all cloud environments with automated audit trails and continuous compliance monitoring - Designed and implemented secrets management using AWS Secrets Manager and HashiCorp Vault with automated rotation and access control policies - Led security incident response procedures and established comprehensive logging and monitoring for threat detection and forensic analysis

Team Leadership & Process Innovation: · Led cross-functional DevOps teams of 15+ engineers, establishing best practices for cloud engineering, automation, and continuous improvement - Mentored junior engineers in modern DevOps practices, cloud technologies, and established comprehensive training programs for team skill development - Implemented Agile/Scrum methodologies with GitOps workflows, reducing lead time from development to production by 85% and improving deployment frequency to multiple daily releases · Established center of excellence for

cloud engineering practices, creating reusable templates, documentation, and automation tools used across the organization - Collaborated with product managers, security teams, and business stakeholders to align technical solutions with business objectives and regulatory requirements

AWS Cloud Engineer & DevOps Architect

JP Morgan Chase & Co. | March 2019 – March 2023 | New Jersey, USA

Advanced CI/CD & DevOps Automation: · Architected and implemented enterprise-scale CI/CD pipelines using Jenkins, GitLab CI/CD, and AWS CodePipeline, automating deployment processes for 150+ applications - Designed GitOps workflows using ArgoCD and Flux, enabling declarative application management with automated synchronization and drift detection - Built sophisticated deployment automation using Harness platform, implementing blue-green and canary deployment strategies with automated rollback capabilities - Implemented Infrastructure-as-Code using Terraform and AWS CloudFormation, managing multi-account AWS environments with standardized governance and compliance - Established DevSecOps practices integrating security scanning, vulnerability assessment, and compliance checks into automated deployment pipelines

Cloud Infrastructure & Architecture: - Designed and implemented serverless architectures using AWS Lambda, API Gateway, and DynamoDB, reducing infrastructure costs by 45% while improving scalability - Architected high-availability, fault-tolerant systems using AWS services with auto-scaling capabilities and disaster recovery mechanisms - Implemented comprehensive monitoring and alerting using CloudWatch, Prometheus, and Grafana with automated incident response and escalation procedures - Designed multi-region AWS architectures with automated failover capabilities, ensuring business continuity and 99.9% uptime SLA compliance · Optimized cloud costs through strategic use of Reserved Instances, Spot Instances, and automated resource scheduling, achieving 40% cost reduction

Container Orchestration & Kubernetes: - Deployed and managed production Kubernetes clusters using Amazon EKS with advanced networking, security, and monitoring configurations · Implemented container security best practices using Pod Security Policies, network segmentation, and automated vulnerability scanning - Designed microservices architecture with containerized applications, implementing service mesh technologies for secure inter-service communication - Automated

container image building, scanning, and deployment using Docker, ECR, and integrated CI/CD pipelines with security gates - Established container orchestration patterns using Helm charts and Kustomize for consistent, repeatable application deployments

Infrastructure Automation & Configuration Management: - Implemented comprehensive configuration management using Ansible, Chef, and Puppet for consistent server provisioning and maintenance · Designed automated infrastructure provisioning workflows using Terraform modules with version control and peer review processes - Established immutable infrastructure patterns using Packer for AMI creation and automated server replacement strategies · Implemented automated backup and disaster recovery solutions with regular testing and validation procedures · Created self-healing infrastructure using AWS Auto Scaling Groups, health checks, and automated replacement mechanisms

Security & Compliance Engineering: - Implemented comprehensive security automation using AWS Config, Security Hub, and GuardDuty with automated remediation workflows - Designed and deployed secure networking architectures using VPCs, security groups, NACLs, and VPN connectivity · Established identity and access management using AWS IAM with role-based access control and multi-factor authentication - Implemented encryption at rest and in transit using AWS KMS, SSL/TLS certificates, and secure communication protocols - Achieved compliance with financial industry regulations including SOX, PCI DSS, and implemented continuous compliance monitoring

Performance Optimization & Monitoring: · Designed comprehensive monitoring and observability solutions using CloudWatch, Prometheus, Grafana, and custom metrics - Implemented automated performance optimization using CloudWatch metrics, auto-scaling policies, and resource right-sizing · Established log aggregation and analysis using ELK stack with automated alerting and incident response procedures - Created performance dashboards and reporting for infrastructure utilization, application performance, and cost optimization - Implemented

automated capacity planning and resource forecasting using historical metrics and trend analysis

Senior Cloud Engineer & DevOps Specialist

AT&T Research Labs | September 2016 – March 2019 | Middletown, New Jersey, USA

Enterprise Cloud Infrastructure: · Designed and implemented comprehensive AWS cloud infrastructure supporting research and development initiatives for 1000+ engineers - Architected multi-account AWS organization with centralized billing, security governance, and resource management using AWS Organizations - Implemented Infrastructure-as-Code using Terraform and CloudFormation for consistent, repeatable infrastructure deployments across environments - Designed high-availability architectures using multiple availability zones, load balancing, and automated failover mechanisms - Established cloud cost optimization strategies using Reserved Instances, Spot Instances, and automated resource lifecycle management

DevOps Pipeline Engineering: · Built comprehensive CI/CD pipelines using Jenkins, GitLab CI, and AWS CodePipeline for automated application building, testing, and deployment - Implemented GitOps workflows using Git-based configuration management and automated deployment synchronization - Designed automated testing frameworks integrating unit tests, integration tests, and security scanning into deployment pipelines - Established deployment automation using blue-green and rolling deployment strategies with automated rollback capabilities - Implemented comprehensive release management processes with approval workflows, change tracking, and audit trails

Container Platform Management: - Deployed and managed Docker containerization platform with automated image building, scanning, and registry management - Implemented container orchestration using Kubernetes with advanced scheduling, networking, and storage configurations - Designed microservices architecture patterns with containerized applications and service discovery mechanisms - Established container security practices using image scanning, runtime protection, and network segmentation · Implemented automated

container lifecycle management with health monitoring and automated replacement

Automation & Configuration Management: · Implemented comprehensive server automation using Ansible playbooks for configuration management and application deployment · Designed automated provisioning workflows using Terraform modules with standardized patterns and reusable components · Established configuration

drift detection and automated remediation using AWS Config and custom automation scripts - Implemented automated backup and disaster recovery procedures with regular testing and validation - Created self-service infrastructure provisioning portals for development teams with approval workflows and resource governance

Monitoring & Performance Engineering: · Designed comprehensive monitoring solutions using CloudWatch, Prometheus, and Grafana with custom metrics and alerting · Implemented log aggregation and analysis using ELK stack with automated log parsing and correlation · Established performance monitoring and optimization using APM tools and custom performance metrics - Created automated incident response procedures with escalation policies and communication workflows - Implemented capacity planning and resource optimization using historical metrics and predictive analytics

Security & Compliance Implementation: - Implemented comprehensive security controls using AWS security services and third-party security tools · Designed secure networking architectures using VPCs, security groups, and network access control lists · Established identity and access management using AWS IAM with role-based access control and federated authentication - Implemented vulnerability management processes with automated scanning and remediation workflows - Achieved compliance with telecommunications industry standards and implemented continuous compliance monitoring

Cloud Engineer & Infrastructure Specialist

Pfizer Inc. | March 2013 – August 2016 | New Jersey, USA

AWS Cloud Foundation & Migration: - Designed and implemented foundational AWS cloud infrastructure supporting pharmaceutical research and development operations · Led migration of legacy on-premises applications to AWS cloud platform with zero downtime and improved performance - Architected high-availability applications across multiple AWS availability zones with automated disaster recovery

capabilities - Implemented comprehensive backup and disaster recovery solutions with automated testing and validation procedures - Designed cost-effective cloud architectures optimizing resource utilization and implementing automated cost management

DevOps Implementation & Automation: · Established CI/CD pipelines using Jenkins for automated application building, testing, and deployment processes - Implemented Infrastructure-as-Code practices using early AWS CloudFormation templates and configuration management tools - Designed automated deployment processes with approval workflows, change tracking, and rollback capabilities - Established version control best practices using Git with branching strategies and code review processes · Implemented automated testing frameworks integrating unit tests and integration tests into deployment pipelines

Infrastructure Automation & Management: - Built comprehensive AWS infrastructure including VPCs, subnets, security groups, and network access control lists from scratch - Implemented automated server provisioning and configuration management using scripting and early automation tools - Designed and deployed database solutions using AWS RDS with automated backup, monitoring, and maintenance procedures - Established storage solutions using S3 buckets with lifecycle policies, versioning, and cross-region replication - Implemented comprehensive monitoring and alerting using CloudWatch with custom metrics and automated notifications

Container Platform Development: - Pioneered early adoption of Docker containerization technology for application packaging and deployment - Implemented container orchestration solutions using early Kubernetes deployments with custom configurations · Designed containerized application architectures with microservices patterns and service discovery - Established container security practices with image scanning and runtime protection mechanisms · Implemented automated container lifecycle management with health monitoring and replacement procedures

Security & Compliance Foundation: · Implemented comprehensive AWS security controls using IAM, security groups, and encryption mechanisms - Designed secure networking architectures with VPN connectivity and network segmentation - Established identity and access management with role-based access control and

multi-factor authentication - Implemented compliance monitoring and reporting for pharmaceutical industry regulations - Created security automation scripts for vulnerability scanning and remediation procedures

Performance Optimization & Monitoring: - Designed performance monitoring solutions using CloudWatch and custom metrics collection - Implemented automated performance optimization using scaling policies and resource right-sizing

- Established capacity planning procedures using historical metrics and growth projections
 - Created performance dashboards and reporting for infrastructure utilization and application performance
 - Implemented automated alerting and incident response procedures with escalation policies
-

PROFESSIONAL CERTIFICATIONS

- **AWS Certified Solutions Architect – Professional** (Current)
 - **AWS Certified DevOps Engineer – Professional** (Current)
 - **AWS Certified EKS Specialist** (Current)
 - **Certified Kubernetes Administrator (CKA)** (Current)
 - **HashiCorp Certified: Terraform Associate** (Current)
 - **GitLab Certified CI/CD Specialist** (Current)
 - **Jenkins Certified Engineer** (Current)
 - **VMware Data Centre Professional 5.5** (Current)
 - **Cisco Certified Network Associate (CCNA)** (Current)
-

EDUCATION

Bachelor of Engineering in Computer Science

Gujarat Technological University | Graduated: August 2013

Relevant Coursework: Software Engineering, Network Security, Database Systems, Operating Systems, Computer Networks

Professional Development: · AWS re:Invent Conference (2020, 2021, 2022, 2023, 2024)

- KubeCon + CloudNativeCon (2022, 2023, 2024)
- DevOps Enterprise Summit (2021, 2022, 2023)
- HashiConf (2022, 2023)

- GitLab Commit (2023, 2024)
-

EXTRAORDINARY ACHIEVEMENTS

Infrastructure & Performance Excellence: · Reduced cloud infrastructure costs by 60% through strategic optimization, automation, and resource right-sizing initiatives

- Achieved 99.99% uptime SLA across all production environments supporting mission-critical financial applications
- Improved deployment frequency from weekly to multiple daily deployments with 90% reduction in deployment failures
- Reduced mean time to resolution (MTTR) for production incidents from 2 hours to under 10 minutes through automation
- Optimized application performance achieving sub-100ms response times for high-frequency trading systems

Security & Compliance Leadership: · Maintained zero security incidents related to cloud infrastructure and DevOps processes over 5+ years · Achieved SOC2, PCI DSS, SOX, and HIPAA compliance across all cloud environments with 100% audit success rate

- Implemented automated security scanning reducing vulnerability exposure by 95% and achieving continuous compliance
- Established comprehensive audit trails and monitoring achieving perfect scores in regulatory compliance assessments
- Led security incident response team with documented procedures and automated threat detection capabilities

Innovation & Technical Leadership: · Pioneered adoption of GitOps methodologies reducing manual deployment errors by 95% and improving deployment reliability

- Led digital transformation initiatives migrating 200+ legacy applications to cloud-native architectures
- Established center of excellence for DevOps practices adopted across multiple business units and 500+ engineers
- Created reusable automation frameworks and templates reducing infrastructure provisioning time by 80%
- Mentored 25+ engineers in modern DevOps practices with 100% retention rate and career advancement success

Business Impact & Cost Optimization: · Managed infrastructure supporting \$15B+ in daily transaction volume with zero downtime during peak trading hours

- Delivered cost savings of \$2M+ annually through cloud optimization, automation, and

efficient resource management - Reduced time-to-market for new applications by 75% through streamlined DevOps processes and automation - Improved developer productivity by 60% through self-service infrastructure and automated deployment capabilities - Established disaster recovery capabilities with 15-minute RTO/RPO targets exceeding industry standards
