About

Senior Software Engineer with over 16 years of experience, including 8 years developing in PHP and designing and modernizing marketing analytics platforms across AWS and GCP. Led the migration of a 40-module marketing platform to AWS and Google Cloud, boosting operational efficiency by 30% and cutting deployment times by 48%. Built PHP 8 microservices to replace legacy PHP 5.6 systems—improving data throughput by 25%—and mentored a team of three engineers to standardize CI/CD pipelines, achieving 99.9% uptime and accelerating release cycles by three days.

Work Experience

TapClicks

Remote/Massachusetts

Senior Software Engineer

Jun '17 - Dec '24

- Spearheaded the modernization of the Raven Tools platform, enhancing system reliability and scalability by applying cloud-based solutions on AWS and Google Cloud, resulting in a 30% increase in operational efficiency.
- Designed and implemented end-to-end integrations with third-party APIs (Google Ads, GA4, DataForSEO), improving data accuracy by 50% and automating 8 key workflows
- Developed robust backend services and CI/CD pipelines, lessening deployment downtime to 3 minutes and increasing deployment frequency to 2 times per week
- Engineered a dedicated PHP 8 microservice environment to interface with legacy PHP 5.6 architecture, enabling forward compatibility with modern APIs and reducing maintenance overhead by 20 hours per month.
- Owned the integration of the Billforward payment system, managing complex billing logic and API authentication using Billforward API and Stripe, processing over 150,000 transactions monthly with 99.9% reduction in payment errors.
- Developed, deployed, and maintained automated tasks using cron jobs and AWS Lambda, streamlining recurring operational processes and decreasing manual intervention by 15 hours per week.
- Mentored junior developers, resulting in a 33% reduction in code defects and a 25% improvement in project delivery time through the enforcement of clean code practices and system design principles.

LKQ

Nashville, TN

Software Engineer

Nov '16 - Jun '17

- Contributed to full-stack development of a high-traffic, customer-facing eCommerce platform, supporting cart, search, inventory, and account management features, serving 5,000 daily users and processing 200,000 transactions per month
- Developed and maintained RESTful APIs and backend services in C# and ASP.NET MVC, enhancing data access speed by 15% and reducing server response time from 250 milliseconds to 130 milliseconds.
- Developed a streamlined JSON/XML parsing framework for internal services, which improved data interoperability, sustaining 5000 transactions per day.
- Streamlined task management and deployment processes through Azure DevOps, which led to a 12% reduction in project delivery time and elevating team efficiency, achieving 2 additional successful releases within 8 weeks.
- Implemented MVC design patterns and supported 1-2 monthly production rollouts, ensuring stable, QA-verified releases with less than 5% post-release defects.
- Participated in Agile Scrum ceremonies, contributing to efficient two-week sprint cycles and rapid feature delivery.

Raven Tools

Nashville, TN

Software Engineer

Mar '16 - Jul '16

- Promoted ongoing development and support of the Raven Tools digital marketing platform, delivering 4 new features and resolving over 20 critical bugs
- Collaborated with customer support teams to increase system performance metrics by 15% through report generation speed adjustment and load balancing.
- Established and deployed a microservices architecture that augmenting application scalability by 40%, precipitating in a 25% decrease in page load times for end-users.
- Integrated a feature that tasked error logging with PagerDuty API, which decreased bug resolution time by 25%, adding 15% growth in application stability.

Churchill Mortgage Corporation

Nashville, TN

Web Developer

Mar '14 - Feb '16

- Serviced and upgraded the company's public-facing corporate website, introducing 12 new features and ameliorating site performance by 40% with minimal direction.
- Developed and secured user-centric features including contact forms, rate calculators, and embedded content, guaranteeing data validation, SQL injection protection, and spam resistance, which led to a 15% boost in user satisfaction.
- Optimized site performance by enacting caching strategies and pruning database calls, diminishing page load times by 3.7 seconds.
- Identified and resolved over 100 code issues and bugs, diminishing site errors by 40% and reinforcing overall user experience.

PathApps / OPKO Health

Nashville, TN

Front-End Developer

Jul '12 - Oct '13

- Introduced a comprehensive restructuring of interactive grids and forms, which boosted usability and internal satisfaction ratings by 50% within six months.
- Rebuilt the internal Kendo UI support library to dynamically generate trackable UI elements, lowering development time by 15% and enabling the team to deliver 4 additional features per quarter.
- Leveraged Knockout.js for two-way data binding and observable models, upgrading interface responsiveness and lessening DOM churn and render latency.
- Redesigned the user interface for the company's proprietary application, culminating in 25% faster loading speeds and component reuse.

Education

Nashville State Community College

May '12

Associate of Science | Computer Science

Also completed coursework in ASL Interpretation as part of a dual major before the program was discontinued.

Skills

CodeIgniter · Symfony · MVVM · Azure DevOps · Angular · ASP.NET MVC · AWS · Bash · C# · C++ · Docker · Git · JavaScript · Jenkins · Jira · Kanban · Laravel · Linux · Microservices · Microsoft Azure · MVC · MySQL · NoSQL Databases · PHP · PostgreSQL · PowerShell · Python · Microsoft SQL Server · Stripe · TypeScript · Visual Studio · Visual Studio Code · XML · SCSS · GCP · Google Ads API · Google Analytics API · Continuous Integration & Continuous Deployment (CI/CD) · Redis Cache · RegEx · Azure DevOps · Knockout.js · Windows Scripting Host · React · Facebook/Meta Ads API
