Senior Front-End Engineer skilled in building scalable, high-performance interfaces and robust design systems. Experienced in Angular and modern workflows, with a passion for crafting elegant, accessible UI components for global products. Hands-on React experience building components within unified design systems, and known for optimizing performance, ensuring maintainability, and driving cross-functional collaboration.

CORE COMPETENCIES

Front-End Architecture • Design Systems • Accessibility (WCAG) • Responsive Design • Cross-Browser Compatibility • Browser APIs • Internationalization & Localization • Performance Optimization • Agile Development • Data-Driven UX • Cross-Functional Collaboration

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, React, Angular, HTML5, CSS3, Angular Material, Bootstrap, Storybook, Figma

Tooling & DevOps: Git, Azure DevOps, YAML, CI/CD Pipelines, Nx (Nrwl/Nx), Google Analytics, Miro, Hotjar

Backend & Full Stack: Node.js, .NET Core, C#, ASP.NET MVC, Web API, REST APIs, SignalR, SQL

Testing & Quality: Jasmine, Karma, Unit Testing

EXPERIENCE

Senior Front-End Engineer

SkyKick — Seattle | Aug 2014 – Sept 2024

- Led front-end architecture and design system strategy in Angular and Storybook, reducing UI build times by 40% and driving adoption across 5+ product teams, covering over 70% of the company's UI footprint.
- Developed high-performance, accessible (WCAG-compliant), cross-browser compatible interfaces for cloud backup and migration tools serving thousands of global customers.
- Introduced and built React components to expand a unified design system, enabling cross-framework adoption and experimentation with new approaches.
- Built a real-time monitoring and analytics dashboard (Angular Material, Sass, ng-charts) providing device health insights and operational metrics to global support teams, reducing support tickets by 40%.
- Implemented internationalization and localization features, adding support for 10+ languages and expanding reach to customers in Latin America, Europe, and Asia.
- Integrated analytics tools (Hotjar, Google Analytics) to drive data-informed UX improvements, increasing engagement by 90% over two years.
- Modernized CI/CD pipelines with Azure DevOps and Node.js, cutting deployment time by 30% and increasing release frequency by 50%.
- Led development of a cross-platform data migration tool (ElectronJS + Angular) that streamlined Azure onboarding for over 1,000 customers.
- Partnered with Design, Product, and Engineering teams to deliver accessible, scalable UIs aligned with user research and technical feasibility.
- Mentored junior engineers and promoted shared component adoption, improving consistency and reducing onboarding time.

Software Engineer

Avanade/Microsoft — Seattle | May 2013 – July 2014

- Redesigned a cloud-based CRM UI (ASP.NET MVC 4) to align with Microsoft's modern design system, improving usability and achieving consistent interface patterns across a platform used by thousands of internal and partner users.
- Migrated services from WCF REST to ASP.NET Web API with OData, increasing integration flexibility and reducing backend development time by 20%.
- Implemented MVVM architecture with Knockout.js and precompiled Handlebars templates, boosting front-end performance and maintainability for a codebase supporting multiple product teams.
- Built a Single Page Application with offline access, browser history navigation, and IndexedDB integration, reducing page load time and improving reliability for global users.
- Standardized development practices by introducing QUnit and Handlebars.js, improving code quality and team productivity by streamlining unit testing and templating.
- Developed real-time dashboards and interactive prototypes for Xbox support teams, improving operational visibility and accelerating design validation cycles.

Software Engineer

HCL/Microsoft — Seattle | Mar 2012 – Apr 2013

- Built single-page tools (HTML, JavaScript, ASP.NET) to streamline Windows OS deployment workflows in Microsoft's download center, reducing setup time from hours to minutes for thousands of downloads.
- Enhanced architecture of a WPF-based publishing platform using MVVM, increasing test coverage and maintainability for a product with millions of monthly users.
- Developed a performance-optimized search algorithm for a C# migration tool, cutting website migration time by 30% and improving overall service throughput.

Senior Developer

Hildebrando/Herbalife — Guadalajara, Mexico | Jan 2011 – Jan 2012

- Led UI/UX team in redesigning internal support software used across the US and Latin America.
- Migrated legacy Silverlight applications to modern web technologies (HTML, CSS, JavaScript), extending system lifespan and reducing maintenance costs.
- Created high-fidelity prototypes to accelerate client feedback and iterate on design decisions.

Software Engineer

SIASA — Merida, Mexico | Jul 2009 – Dec 2009

- Developed access control systems for gyms and parking facilities using C# with biometric hardware integration.
- Built localization-ready UI prototypes to support multi-regional product rollouts.

EDUCATION

Technical Program in Geographic Information Systems

Kanazawa Institute of Technology — Japan | Mar 2010 – Nov 2010

B.Sc. in Systems Engineering

Anahuac Mayab University — Mexico | Aug 2005 – Jul 2009
