

Adrian Gillette 602.741.1964 | gillette@adrian.net | www.linkedin.com/in/adriangillette

Professional Summary

Highly accomplished Senior Full-Stack Developer with 15+ years of experience, specializing in scalable front-end architecture and UI/UX leadership. Recently honed expertise in AI-assisted development, product conceptualization, and prompt engineering, leveraging cutting-edge AI tools to accelerate development cycles and innovate solutions. I recently architected, designed, and developed Pollyn, a public-facing web application, from concept to production, leveraging AI coding tools (Cursor, WindSurf, Claude, Google's Genkit) for PRD generation, UI/UX ideation, and code generation, resulting in 8x faster development and 200% improved feature implementation. Proven ability to lead diverse teams, drive complex projects from ideation to production, and deliver significant business impact across various industry verticals.

Technical Skills

- **Languages:** Typescript, JavaScript, HTML5, CSS3
- **Front-End Frameworks/Libraries:** Angular, React, Next.js, Redux, NGXS, Formly, JEST, React-hook-form
- **Styling:** SASS, JSS, Tailwind CSS
- **AI/ML Tools:** Cursor, WindSurf, Claude, Google's Genkit, MagicPatterns, Manus, Perplexity
- **Cloud Platforms:** AWS, Google Cloud, Firebase
- **Databases:** Firebase, Access
- **Other Tools/Concepts:** Git, SVN, Agile, Scrum, UI/UX Design, Product Development, PRD Generation, Prototyping, Real-time Data Synchronization, API-based Architectures

Career Highlights

- Architected, designed, and launched Pollyn, a production-ready, public-facing web application, utilizing AI coding tools for rapid prototyping, UI/UX ideation, and intelligent component generation, achieving 8x faster development and 200% improved feature implementation.
- Successfully led the web team transition for First Republic Bank to JP Morgan Chase, building AWS-based web applications that facilitated mass data migration with ~10x migration throughput compared to JPMC's existing tooling.
- Designed and built an application development framework that reduced delivery cycles from one month to two weeks.
- Led the redesign and development of a school's website content management system, which reduced content management man-hours for 27,000 web-pages by 30%.
- Developed a proprietary content management system using Visual Basic and Access, resulting in savings of \$700,000 from decreased course development cycles and reducing development costs by \$500,000 per training module.

Professional Experience

Technology Consultant – across the U.S. (Apr 2014 – Present) *Provide senior-level technology leadership and full-stack expertise, specializing in front-end architecture, UI/UX design, and AI-assisted development for diverse product portfolios.*

- **Pollyn** (Jan 2024 – Present)
 - Product manage tasks, identifying user challenges, prioritizing needs, gathering requirements and defining feature specifications.
 - Architected, designed, and developed a public-facing web application from concept to production, leveraging AI coding tools (Cursor, WindSurf, Claude, Google's Genkit, MagicPatterns, Perplexity) for PRD generation, UI/UX ideation, and code generation, resulting in 8x faster development and 200% improved feature implementation. The project was built using TypeScript.
 - Orchestrated the front-end rebuild using WindSurf AI, addressing technical debt, reducing loading times from 20 to 5 seconds, and improving perceived application responsiveness.
 - Developed a serverless AI assistant (claude-task-master) to automate PRD planning, significantly reducing task time from 20+ minutes to 3 minutes.
 - Implemented Firebase, Firestore, Google Cloud, and Firebase Cloud Messaging for robust backend infrastructure and real-time communication.
- **JP Morgan Chase** (Jan 2024 – Dec 2024)
 - Led the web team transition for First Republic Bank to JP Morgan Chase, responsible for building typescript-based web applications in AWS environment designed to facilitate mass data migration processes (data integrity validation, data transformations, record-level permission rights). Achieved ~10x migration throughput compared to JPMC's existing tooling.
 - Increased development velocity by at least 20% by implementing a custom design system, reducing redundant code and improving UI consistency.
- **First Republic Bank** (May 2018 – Dec 2023)
 - Served as UX/UI Designer and Front-End Architect, leading the development of critical internal Angular and Next.js applications, optimizing user workflows and data visualization.
- **American Express** (Jan 2018 – Apr 2018)
 - Developed features for two internal web applications for the American Express Risk Management Group, one using React-Redux and the other Angular.
- **Cadreon** (Mar 2016 – Dec 2017)
 - Successfully led the effort to build Cadreon's new Angular-based technology platform, unifying campaign execution, management, analytics, and reporting across the globe, significantly streamlining operations.
- **Silver Spring Networks** (Mar 2015 – Jan 2016)
 - Technical lead in the successful launch of Silver Spring Networks' public developer portal (<https://developer.ssni.com/>), customizing and extending Drupal functionality using Angular 4.x. Led a team of 10 offshore developers.

- **Proteus Digital Health** (Mar 2014 – Feb 2015)
 - Architected and led the development of a multi-tenant web-based portal platform based on Angular framework.

Personal Capital – Redwood City (Sep 2010 – Feb 2014) WebUI Team Lead

- Led, mentored, and coached front-end engineering members, building their skills and readiness in web development responsibilities.
- Successfully launched the flagship financial web application with Flex/AS3 technologies, then transitioned the team and application to Backbone, Angular, Raphael, and SASS.
- Built a high-performing front-end team by instilling good coding practices, mentoring members, and fostering cross-functional team collaboration.

Eveo – San Francisco (Dec 2008 – May 2010) Flex Engineering Team Lead

- Team manager and front-end engineering lead, overseeing all agency projects.
- Designed and built an application development framework that reduced delivery cycles from one month to two weeks.

Arizona State University – Tempe (Apr 2001 – May 2004) Senior Technology Analyst

- Led the redesign and development of the school's website content management system, which reduced content management man-hours for 27,000 web-pages by 30% and established new precedence in content ownership.

Early Career Contributions

- **Expius, Inc.** – Scottsdale (Mar 1999 – Nov 2000)
 - Project Manager responsible for managing a portfolio of projects, from network implementation to e-commerce development.
- **Boeing Company** – Mesa (Feb 1998 – Feb 1999)
 - Lead Developer; designed and built a proprietary content management system, resulting in savings of \$700,000 from decreased course development cycles and reducing development costs by \$500,000 per training module.
- **Northrop Grumman** – Mesa (Jan 1997 – Dec 1997)
 - Developer contributing programming skill to web and software development projects, including a proof-of-concept intranet application for the U.S. Air Force.

Educational Background

Thunderbird School of Global Management (M.B.A.) – Glendale, AZ (May 2006)

Arizona State University (B.S.) – Tempe (Dec 1996)
