[LinkedIn](#) | (206) 822-3878 | ahmedsheikh253@gmail.com

Security-focused engineer with a strong background in observability, incident management, and building automation to improve system reliability at scale. Experienced in designing dashboards, implementing SLOs/SLIs, and debugging complex distributed systems in cloud-native environments.

Skills

- **Cloud & Infrastructure:** AWS, Azure, Kubernetes, DynamoDB, MySQL, S3, SRP/RSRP Storage, Linux
- **Monitoring & Observability:** Datadog, Splunk, Grafana, Jaeger, ELK, Sentry.io, Geneva/Jarvis, KPI Dashboards, Alerts, SLO/SLIs
- **Automation & Scripting:** Bash, PowerShell, Node.js/JavaScript, TypeScript, Go, C#/.NET
- **DevOps & CI/CD:** Terraform, GitHub Actions, Jenkins, Git, Infrastructure debugging tooling
- **Incident & Service Management:** Incident response, RCA facilitation, Problem/Change Management (ITIL framework)

Education

B.Sc. Computer Science - Central Washington University June 2017

Experience

Amazon - Support Engineer III, June 2025 - Present

- Built automation to improve reliability of Amazon's Catalog and Selection systems, reducing recurring incidents.
- Designed and deployed KPI dashboards (Datadog & internal tooling) to track SLA compliance, latency, and error trends.
- Drove automation of RCA documentation and remediation workflows, improving MTTR during critical peak events.
- Partnered with engineering and business teams globally to ensure uptime, data quality, and operational excellence.

Microsoft (Contract) - Site Reliability Engineer, February 2025 - June 2025

- Developed observability tooling in Geneva/Jarvis and automated debugging workflows for large-scale distributed systems.
- Improved API security and reliability by migrating to DSTS-based authentication, eliminating legacy shared accounts.
- Supported migrations from legacy XLS storage to SRP/RSRP storage, proactively troubleshooting migration failures.
- Built monitoring/tagging solutions to enforce API risk policies, improve traceability, and reduce incident recurrence.

Ookla - Software Engineer, November 2021 - June 2024

- Implemented observability solutions with **Splunk, Grafana, and Sentry.io** to detect anomalies and reduce downtime.
- Built monitoring and alerting pipelines (SNS, S3, DynamoDB) for real-time outage detection and customer notification.
- Designed distributed data pipelines to process large-scale analytics with AWS services.
- Collaborated cross-functionally with mobile, ads, and marketing teams to ship customer-facing features.

Ookla - Services Engineer, September 2019 - November 2021

- Demonstrated Speedtest Custom capabilities to clients.
- Resolved escalated tickets and improved documentation.
- Built Salesforce dashboards for ticket resolution insights.

Apptio - Support Engineer, June 2016 - September 2019

- Compiled KPI reports for leadership.
- Automated tasks through scripting.
- Led incident management and troubleshooting in Azure environments.
- Collaborated with engineering teams to drive escalated issues to resolution
