Data Scientist with a masters degree and 4+ years of experience across sales, product, marketing, and supply chain domains.

EDUCATION

MS Data Science, New Jersey Institute of Technology (NJIT)(GPA: 4.0/4.0)

Sept 2021 – May 2023

- Deliverable Project: Developed a Gen AI-based chatbot solution that utilizes LLMs such as GPT3 and Flan-T5 to enhance ADP Inc.'s customer service; applied fine-tuning techniques using HuggingFace and PyTorch on AWS Sagemaker.

BS Mechanical Engineering, Kaunas University of Technology

Sept 2014 – Jun 2018

EXPERIENCE

Data Scientist, Intuit

Mar 2024 – Present

- Led business review meetings for marketing campaign effectiveness by transforming KPIs into compelling data stories, and effectively communicating insights to stakeholders, which resulted in improved campaign strategies and increased ROI.
- Designed **Tableau dashboards** that monitor marketing traffic, sales funnel conversion, cohort customer retention, and acquisition metrics for ongoing campaigns, providing real-time insights to 300+ stakeholders across cross-functional teams.
- Conducted statistical analysis to determine **subscription propensity** using customer journeys across the product ecosystem and collaborated with the GTM team to launch targeted marketing campaigns, leading to a 20% increase in signups.
- Conducted **customer segmentation** to analyze the product usage among users acquired through different sales channels and collaborated with stakeholders to drive strategic resource reallocation that contributed to an **additional \$5M in revenue**.

Analytics Lead, Cox Communications

Dec 2022 – Dec 2023

- Conducted historical analysis on IOT data and discovered bottlenecks in a customer's logistics operation for equipment return; collaborated with the customer to implement recommendations, contributing to the team converting the pilot contract to a long-term **contract worth \$3M ARR**.
- Applied **quantitative analysis** to analyze user behavior and provided insights that influenced product development roadmap; partnered with the product team to conduct 5+ A/B tests, resulting in launching features that boosted retention rate by 12%.
- Designed Looker dashboards for the leadership to track North Star, sales, product, operations, and other metrics responsible for business performance; optimized SQL queries for performance resulting in reduced data retrieval times by 25%.
- Developed a decision trees-based **ML solution** to mitigate equipment theft; conducted data manipulation, converted findings into narratives, and communicated them with recommendations to stakeholders, **saving \$150K from potential losses**.
- Defined data models and pipelines using GCP tools, SQL, and Python to ingest streaming sensor data into Google Big Query.

Data Science Associate (Graduate Assistant), NJIT

Jan 2022 – Aug 2022

- Developed classification-based machine learning models to predict GPA potential, reducing application **review time by 15%**.
- Analyzed enrollment data using SQL to identify trends and patterns, enabling teams to make informed decisions for Fall 2022.
- Designed 10+ **Power BI** dashboards containing historical admissions trends per the executive leadership's requirement.

Analyst, BSE Consultants

Jan 2019 – Aug 2021

- Acted as a subject matter expert in the real estate space for clients and provided analytical support and project management for construction projects, presenting data-driven insights using BI tools, that improved efficiency and client satisfaction.
- Conducted data analysis and identified patterns in material usage **saving 40K dollars** from estimated project spending.

TECHNICAL PROFICIENCY

- **Data Science** – Big Data Analytics, Machine Learning (Regression, Classification, Deep Learning), Data Visualization, Statistical Analysis (A/B Testing), Predictive Modeling, Data Manipulation, Business Intelligence, Stakeholder Management.
- **Technical** – Python, SQL, AWS (SageMaker, Athena), GCP (BigQuery, Vertex AI), Tableau, Databricks, TensorFlow, Excel.
