

Name: Ajit Patil
.NET developer
Mail ID: ajitpatil3077@gmail.com
Contact No: (732)289-0851

PROFESSIONAL SUMMARY

- ❖ 18+ years of expertise in designing, developing, and maintaining scalable web and desktop applications using .NET Framework, .NET Core.
- ❖ Proficient in Software Architecture & Design, Azure Cloud Computing, JavaScript ecosystem and .NET Technologies
- ❖ Proficient in programming languages like C#, JavaScript, Typescript, Python 3 and SQL, with a focus on object-oriented design principles.
- ❖ Solid understanding of Agile methodologies and experience in collaborative environments using tools like JIRA and Git.
- ❖ Hands-on experience in creating RESTful APIs and integrating third-party APIs for seamless application functionality.
- ❖ Experience in Service Oriented Architectures (SOA) and proficient in developing and consuming WCF Services, Windows Services and Web APIs and strong understanding of various Protocols like SOAP, REST, HTTP and TCP/IP.
- ❖ Proficient in event-driven architecture using message brokers like RabbitMQ or Kafka.
- ❖ Proficient in Application Design, developing Use-case diagrams, Class diagrams, Sequence diagrams using UML.
- ❖ Skilled in front-end technologies such as Angular, HTML, CSS, JavaScript for building responsive user interfaces.
- ❖ Experience with Entity Framework Core for ORM (Object-Relational Mapping).
- ❖ Experience in implementing Domain-Driven Design (DDD) in large-scale applications.
- ❖ Proficient in-Service Bus Architecture.
- ❖ Experience in implementing Error Handling, Trouble Shooting, and Exception Management, tracing and logging features.
- ❖ Strong knowledge of database design and management with MS SQL Server, Entity Framework, and LINQ.
- ❖ Excellent understanding of relational database concepts, including normalization, writing SQL stored procedures, Views, Triggers Functions and T-SQL and PL/SQL programming.
- ❖ Experience with Dependency Injection (DI) frameworks in .NET and understanding of inversion of control (IoC).
- ❖ Hands-on experience with ASP.NET MVC architecture.
- ❖ Adept at using DevOps tools like Docker, Kubernetes, Jenkins, and Azure DevOps for CI/CD pipelines and containerized deployments.
- ❖ Knowledge of Web API for building RESTful services.
- ❖ Committed to delivering high-quality software solutions by adhering to best coding practices, rigorous testing, and continuous learning.
- ❖ Proficient with Windows Forms for legacy desktop applications.
- ❖ Knowledge of .NET Microservices architecture and development.
- ❖ Expertise in developing Client/Server Applications on Three Tier Architecture, N-Tier Architecture, SOA (Service-oriented Architecture), MVC (Model View Controller), MVVM (Model View View Model), Entity Framework.
- ❖ Proficient in debugging, troubleshooting, and optimizing application performance.
- ❖ Experience with front-end testing tools like Jasmine, Karma and Familiarity with front-end build tools such as Webpack, Gulp, Grunt.
- ❖ Experience with NoSQL databases like MongoDB.
- ❖ Proficiency in deploying .NET applications to Azure and AWS.
- ❖ Knowledge of containerization with Docker for building, testing, and deploying apps.
- ❖ Familiarity with Kubernetes for orchestration and managing containerized applications.
- ❖ Experience in Continuous Integration/Continuous Deployment (CI/CD) pipelines.
- ❖ Familiarity with infrastructure as code (Isac) using ARM templates.
- ❖ Strong understanding of microservices architecture and its principles.
- ❖ Understanding of API Gateway patterns for managing microservices communication.
- ❖ Knowledge about Distributed Caching (Redis, Memcached).
- ❖ Proficient with the SOLID principles and design patterns (Singleton, Factory, Observer, etc.).
- ❖ Knowledge of the Repository and Unit of Work patterns.
- ❖ Expertise in securing web applications using OAuth2, OpenID Connect, and JWT.
- ❖ Knowledge of securing .NET applications using ASP.NET Identity.
- ❖ Familiar with role-based and claims-based authorization strategies.
- ❖ Experience with HTTPS, SSL/TLS, and securing APIs using API keys.

AREA OF EXPERTISE

Programming Languages:	C#, VB.NET, JavaScript/TypeScript, SQL, Python (for scripting/automation), HTML/CSS.
Automation Tools:	Selenium, PowerShell Scripts, Azure DevOps Pipelines, Jenkins, SVN

Frameworks:	.NET Core / .NET Framework, ASP.NET MVC, Entity Framework, Angular , NUnit / MSTest, xUnit.
Database/Database Tools:	SQL Server, PostgreSQL, MySQL, Oracle, MongoDB, Azure Cosmos DB, SSIS, SSRS, T-SQL.
IDE and Tools:	Visual Studio, Visual Studio Code, JetBrains Rider, Postman, Swagger, Fiddler.
Operating Systems:	Windows Server, Linux.
Web:	ASP.NET Core, ASP.NET Web API, RESTful APIs, Robot Framework.
Reporting tools:	Crystal Reports, SSRS.
Utilities:	Git, GitHub, GitLab, Bitbucket, NuGet, Docker, Kubernetes.
Bug Management Tools:	JIRA, Azure DevOps Boards.
SOA Technologies:	Web Services (SOAP, REST), WCF, Microservices Architecture.
Bug Tracking Tools:	JIRA, Azure DevOps.

WORK EXPERIENCE:

Technical Lead Architect (Pune, INDIA)	 Client: Tata/EDM	 May 2018 – Until now
---	---------------------------	-------------------------------

Employer: Triplepoint Technology Company

Product: Softmar Integration with Commodities and Vessel scheduling system

Description: A cloud-based SaaS solution, the integration of distributed systems, Softmar (Voyage Management System) with the Commodity Management and Vessel Scheduling System provides a comprehensive, all-in-one solution. These distributed systems seamlessly connect Softmar with any CTRM solution, enabling efficient management of end-to-end commercial shipping activities. Cargo transport requirements are effortlessly transferred into Softmar, while cost and other relevant data seamlessly flow back into the CTRM solution. It offers real-time freight risk management, global vessel tracking, analysis of market cargo and cargo commitments, and in-house ocean freight requirements. With Softmar, all vessel operations and voyages are seamlessly handled, powered by the industry's most robust voyage estimator, equipped with built-in satellite tracking to ensure precise vessel and cargo geolocation at all times. This product is used by clients for voyage management and cargo management and this product is developed in .NET technology

Responsibilities:

- ❖ Implemented the development using Service Bus Architecture (Enterprise Service Bus, ESB) for distributed system to streamline integration between three systems.
- ❖ Designed and implemented microservices architecture for modular and scalable application development.
- ❖ Backend Framework enhancements, new modules and tools. Performance tuning of application.
- ❖ Utilized SqlTableDependency service broker to build real-time notifications for Vessel updates processing.
- ❖ Developed and maintained RESTful APIs using ASP.NET Core Web API for secure data integration between systems.
- ❖ Utilized Entity Framework Core for efficient database interactions and ORM mapping.
- ❖ Developed Framework for Logging, Configuration management and Exception Handling into the system using Log4Net.
- ❖ Optimized performance of critical SQL queries and stored procedures for vessel data and operation.
- ❖ Collaborated with business analysts to understand and translate voyage management processes into technical requirements.
- ❖ Worked extensively with Azure Cloud Services for hosting and scaling enterprise applications.
- ❖ Managed the migration of legacy .NET Framework applications to .NET Core for improved performance and maintainability.
- ❖ Built secure authentication and authorization mechanisms using RBAC.
- ❖ Integrated third-party APIs for vessel position location updates.
- ❖ Managed code versioning and collaboration using Git and SVN.
- ❖ Automated CI/CD pipelines using Azure DevOps Pipelines for efficient deployment.
- ❖ Implemented containerization using Docker to standardize application environments.
- ❖ Mentored and guided a team of developers on best practices and coding standards.
- ❖ Developed and maintained unit tests using NUnit for high code coverage.
- ❖ Established caching strategies using Redis to enhance application performance.
- ❖ Conducted code reviews to ensure high-quality, maintainable, and secure codebase.
- ❖ Defined and implemented application monitoring and alerting strategies for production stability.
- ❖ Improved data security by implementing encryption protocols and secure data storage.
- ❖ Configured Load Balancers for improved fault tolerance and scalability of financial systems.
- ❖ Implemented SSO (Single Sign-On) to simplify user authentication across multiple systems.
- ❖ Collaborated with stakeholders to design application roadmaps and ensure alignment with business goals.
- ❖ Participated in Agile ceremonies, including sprint planning, reviews, and retrospectives.
- ❖ Managed documentation for technical specifications, workflows, and system integrations.

- ❖ Worked closely with cross-functional teams to deliver projects on time and within budget.
- ❖ Provided post-deployment support and resolved production issues to ensure system stability.

Environment: C#, .NET Core, Service Bus, RabbitMQ, ASP.NET Core, Entity Framework, Docker, Kubernetes, SqlTableDependency, SQL Server, PostgreSQL, T-SQL, Redis, SSRS, Selenium, Jenkins, Git/GitHub, Visual Studio, Visual Studio Code, Postman, Fiddler, JIRA, OAuth 2.0, RESTful APIs, Log4Net, Robot Framework, Kafka, Microservices Architecture, IMO Compliance, Agile/Scrum Methodologies, Windows Server.

Technical Lead Architect (Pune, INDIA)	 Client: Ultrabulk 	Oct 2011– May 2018
---	------------------------------	---------------------------

Employer: Triplepoint Technology Company

Product: Shipping and Voyage Management system (Softmar)

Description: Softmar product is a cloud-based SaaS solution for vessel chartering and operations across liquid, gas, and bulk commodities. It offers real-time freight risk management, global vessel tracking, analysis of market cargo and cargo commitments, and in-house ocean freight requirements. With Softmar, all vessel operations and voyages are seamlessly handled, powered by the industry's most robust voyage estimator, equipped with built-in satellite tracking to ensure precise vessel and cargo geolocation at all times. This product is used by clients for voyage management and cargo management and this product is developed in .NET technology

Responsibilities:

- ❖ Implemented the development of enterprise-grade applications using .NET Core and C# to streamline vessel servicing processes.
- ❖ Designed and implemented microservices architecture for modular and scalable application development.
- ❖ Backend Framework enhancements, new modules and tools. Performance tuning of application.
- ❖ Developed and maintained RESTful APIs using ASP.NET Core Web API for secure data integration between systems.
- ❖ Utilized Entity Framework Core for efficient database interactions and ORM mapping.
- ❖ Optimized performance of critical SQL queries and stored procedures for vessel data and operation.
- ❖ Collaborated with business analysts to understand and translate voyage management processes into technical requirements.
- ❖ Worked extensively with Azure Cloud Services for hosting and scaling enterprise applications.
- ❖ Automated ETL (Extract, Transform, Load) processes using SSIS (SQL Server Integration Services) to streamline data processing.
- ❖ Created custom reports for compliance auditing using Crystal Reports and SSRS.
- ❖ Managed the migration of legacy .NET Framework applications to .NET Core for improved performance and maintainability.
- ❖ Utilized SqlTableDependency service broker to build real-time notifications for Vessel updates processing.
- ❖ Integrated third-party APIs for vessel position location updates.
- ❖ Automated CI/CD pipelines using Azure DevOps Pipelines for efficient deployment.
- ❖ Implemented containerization using Docker to standardize application environments.
- ❖ Mentored and guided a team of developers on system architecture, coding best practices and coding standards.
- ❖ Ensured adherence to Maritime shipping industry compliance standards such as IMO.
- ❖ Developed and maintained unit tests using NUnit and xUnit for high code coverage.
- ❖ Conducted performance testing and tuning using Postman.
- ❖ Deployed and monitored applications in production using Azure Monitor and Application Insights.
- ❖ Established caching strategies using Redis to enhance application performance.
- ❖ Improved system reliability by implementing health checks and robust error-handling mechanisms.
- ❖ Collaborated with QA teams to define test scenarios and automate regression tests.
- ❖ Conducted code reviews to ensure high-quality, maintainable, and secure codebase.
- ❖ Defined and implemented application monitoring and alerting strategies for production stability.
- ❖ Utilized T-SQL for complex maritime data transformations and reporting.
- ❖ Configured Load Balancers for improved fault tolerance and scalability of financial systems.
- ❖ Collaborated with stakeholders to design application roadmaps and ensure alignment with business goals.
- ❖ Participated in Agile ceremonies, including sprint planning, reviews, and retrospectives.
- ❖ Managed documentation for technical specifications, workflows, and system integrations.
- ❖ Provided post-deployment support and resolved production issues to ensure system stability.

Environment: C#, Angular, .NET Core, ASP.NET Core, Entity Framework, Docker, Kubernetes, SqlTableDependency, SQL Server, PostgreSQL, T-SQL, Redis, SSRS, Selenium, Jenkins, Git/GitHub, Visual Studio, Visual Studio Code, Postman, Fiddler, JIRA, OAuth 2.0, RESTful APIs, Robot Framework, Kafka, Microservices Architecture, IMO Compliance, Agile/Scrum Methodologies, Windows Server.

Sr. Software Engineer (Pune, INDIA)	 Client: Citibank/ Barclays 	Apr 2008– Oct 2011
--	---------------------------------------	---------------------------

Employer: SunGard STeP New Jersey - now part of FIS Company

Product: IntelliMATCH Suite, IntelliSuite, Exchange and Trade Derivatives

Description: IntelliSuite is a scalable and robust multi-tier system that integrates industry best practices for straight-through exception processing, reconciliation, customer service, and cash management within a unified platform and architecture. The product suite includes desktop applications such as IntelliTRACS, IntelliMATCH, IntelliTRAN, and Real-Time Liquidity Management (RTLTM), along with a web application that consolidates features from these products. IntelliSuite is widely used by leading financial institutions worldwide. Designed with an N-tier architecture, IntelliSuite is a distributed enterprise application leveraging the latest technologies to meet current financial industry trends and demands.

Responsibilities:

- ❖ Developed and implemented the web tier using ASP.NET,
- ❖ Integration tier is developed in C#.NET, and the application tier is implemented in C#.NET with VC++ native DLLs and COM components.
- ❖ Manage Communication module using WCF services.
- ❖ Design and developed rule-based filters, transformation tools for exchanges.
- ❖ Built and optimized RESTful APIs to facilitate secure communication between healthcare systems.
- ❖ Utilized Entity Framework for efficient database access and management.
- ❖ Provide integration support to UI Development team.
- ❖ Designed and implemented role-based access control (RBAC) for access the application components.
- ❖ Built the migration of legacy financial systems to ASP.NET for better performance and scalability.
- ❖ Used PowerShell scripts for automating deployment and maintenance tasks.
- ❖ Collaborated with cross-functional teams to deliver high-quality healthcare solutions on time.
- ❖ Worked on secure data exchange between financial data providers using SOAP and REST APIs.
- ❖ Conducted code reviews to ensure adherence to coding standards and best practices.
- ❖ Optimized and fine-tuned SQL Queries using T-SQL for SQL database.
- ❖ Automated regression testing using tools like Postman and Selenium.
- ❖ Collaborated with QA teams to design test cases and ensure thorough testing of financial modules.
- ❖ Developed custom workflows for reconciliation processing and settlement management cycle.
- ❖ Conducted training sessions for junior developers on application usage and implementation details.
- ❖ Utilized JIRA for tracking and resolving development tasks and bugs.
- ❖ Optimized API endpoints for finance data exchange, reducing response time.
- ❖ Ensured seamless system upgrades with minimal downtime for critical financial applications.

Environment: C#, .NET Framework, ASP.NET MVC, ASP.NET Web Forms, Entity Framework, WCF, SQL Server, T-SQL, RESTful APIs, SOAP, Selenium, Postman, NUnit, MSTest, Jenkins, TFS, Crystal Reports, Fiddler, Windows Server.

Software Engineer (Pune, INDIA)	MyOuthouse	Jan 2005 - Mar 2008
---------------------------------	------------	---------------------

Employer: eZest Software Solutions Ltd.

Product 1: ERP System

Description: MyOuthouse is ERP web application developed for OBS which is UK based firm that provides all ERP practices to their customers. This incorporates basic functionality of handling bookkeeping, customers, suppliers, and also sales, purchasing and warehouse details. Different modules are loosely integrated in the sense there will be minimal data exchange across modules. User workflows are largely contained within the module and any cross linking to a different module done is via Dashboard quick links rather than by a workflow event. Project is development of multi-lingual and multi-currency e-Commerce website which allows user to take worldwide trading. This project is developed using Microsoft Visual Studio.NET 2005 with SQL Server as backend database.

Responsibilities:

- ❖ Development of web-based applications using ASP.NET and Web Forms for efficient business operations.
- ❖ Designed and implemented custom user controls and reusable components in ASP.NET.
- ❖ Responsible for Class design of inventory and General ledgers sub module of bookkeeping
- ❖ Developed enterprise-level applications using C# and .NET Framework to support internal systems and customer-facing products.
- ❖ Utilized Entity Framework for efficient database operations and management of ERP data models.
- ❖ Built and optimized SQL Server databases for storing large-scale system data and business transactions.
- ❖ Responsible for preparing Software Requirement Specification
- ❖ Implemented C# for custom business logic and user interface solutions for various internal applications.
- ❖ Collaborated with cross-functional teams to design and implement multi-tier applications using ASP.NET.
- ❖ Involved in demos of Module in module interface meeting and documentation for Inventory and general ledgers.
- ❖ Managed and optimized application performance using SQL Server Profiler, Performance Monitor, and custom profiling tools.

- ❖ Enhanced user experience by implementing AJAX for dynamic, real-time web applications.
- ❖ Developed prototype model for inventory and general ledgers.
- ❖ Developed customer entity, Inventory and bookkeeping Modules.
- ❖ Conducted thorough code reviews to ensure clean, maintainable, and efficient code across projects.
- ❖ Designed data models and implemented efficient data access layers using Entity Framework.
- ❖ Enhanced user interfaces using JavaScript, and CSS for a responsive and modern user experience.
- ❖ Developed troubleshooting efforts for production issues related to database performance, API failures, and system downtime.

Environment: Waterfall methodology, .NET Framework 3.5, ASP.NET, C#, ADO.NET, Microsoft Visual Studio 2008, IIS, Advanced JavaScript, HTML, SQL server 2005 - T-SQL, Stored Procedure and SharePoint.

Product 2: Spidering of Data from Job Websites

Description: The purpose of the project is to spider web sites using a console application written in C# .NET 1.1. Some web sites we spiders include Monster, HotJobs, CareerBuilder, Dice, the Washington Post, and several others. We capture the data for total job postings by location and job category and store the total number of jobs and also the detail for each job record (the job title, employer name, etc). We aggregate the detailed job posting data for distribution on the Client's web site using information collected in SQL Server tables.

Responsibilities:

- ❖ Developed and maintained Backend services for Spidering website, Session Maintenance, Search Criteria.
- ❖ Implemented Regular expressions to fetch accurate data and elevated performance of data retrieval from job websites.
- ❖ Designed and developed SQL Server database schemas and complex T-SQL queries for data management and retrieval.
- ❖ Implemented business logic and data models using C# and Entity Framework for robust, data-driven applications.
- ❖ Used Visual Studio and Team Foundation Server (TFS) for version control and project management.
- ❖ Optimized application performance through code profiling and memory management techniques in C#.
- ❖ Supported legacy applications built on .NET Framework 3.5 and 4.0, ensuring compatibility and upgrading to later versions.
- ❖ Built data-driven web applications utilizing SQL Server stored procedures, views, and triggers for complex business logic.

Environment: C#, .NET Framework 3.5/4.0, Regular expression, SQL Server, T-SQL, Visual Studio 2005, SQL Server Management Studio (SSMS), Windows Server.

Product 3: Workflow Management

Description: This project is development of web based document and workflow management system with vision to create web based document management product with entire Intellectual Property Rights (IPR). Also reduce dependence on third party product, have complete control over functionality and implementation of the product and development of secure and accessible application product.

Responsibilities:

- ❖ Developed and maintained workflows using web pages in ASP.NET.
- ❖ Implemented AJAX for partial page refresh and faster execution.
- ❖ Implemented User Authentication.
- ❖ Designed and developed SQL Server database schemas and complex T-SQL queries for data management and retrieval.
- ❖ Implemented business logic and data models using C# and Entity Framework for robust, data-driven applications.
- ❖ Used Visual Studio and Team Foundation Server (TFS) for version control and project management.
- ❖ Built data-driven web applications utilizing SQL Server stored procedures, views, and triggers for complex business logic.
- ❖ Implemented data caching strategies using Memcached and ASP.NET Caching to improve application performance.

Environment: C#, ASP.NET 1.1, SQL Server 2000, ADO.NET, AJAX, .NET Framework 3.5/4.0, SQL Server, T-SQL, Visual Studio 2005, SQL Server Management Studio (SSMS), Windows Server.

Education:

Master's: Master of Computer Applications (MCA) , Passed out in 2005.

Bachelor's: Bachelor of Science (Chemistry) BSc, Passed out in 2001.

Certifications:

Microsoft Certified: Administrator Associate Azure AZ-103: In Apr 2020

Microsoft Certified: Azure Solution Architect AZ-300: In May 2020

Microsoft Certified: Azure Architect Design AZ-301: In July 2020

Microsoft Certified: Microsoft Azure Fundamentals: In May 2021

AWS Certification: SysOps Associate Certification: In Apr 2021

AWS Solution Architect – Associate: In May 2021
