

PROFESSIONAL SUMMARY

- ISO 27001 Certified Security professional with overall 10+ years of experience in IT projects relating to **Banking, Telecom, Cyber security, and Cyber Intelligence**.
- Strong Academic background **master's degree in Information Technology Security** as specialization and bachelor's degree in **Computer Systems Engineer**.
- Accomplished Cybersecurity Engineer with a decade of experience in the IT industry.
- Proven track record in driving successful **handling incident response events, Cyber Intelligence and Data Loss Prevention**. Understanding of incident response procedures, including **how to identify, contain, eradicate, and recover from security incidents**.
- Skilled in end-to-end **cybersecurity strategics, cybersecurity assessments, Threat Hunting**, Cyberattacks, malware analysis.
- Strong experience implementing security measures, incident handling, and maintaining secure systems.
- Strong experience and understanding of **network protocols, TCP/IP, DNS, VPNs, firewalls, IDS/IPS, and other security-related technologies**.
- Familiarity with Windows, Linux, and macOS operating systems, including their security configurations and vulnerabilities.
- Strong Understanding of threat actors, their techniques, tactics, and procedures (TTPs), and how to leverage threat intelligence feeds effectively.
- Preparing Weekly, monthly **cybersecurity reports and detailed incident reports**.
- Experience in securing different operating systems (Windows, Linux, macOS), hardening configurations, and patch management.
- Successfully interacted with multiple Stakeholders for project implementation and maintained excellent relationship for successful delivery of the project.
- Good understanding and experience on ISO and NIST Standards, involved in cyber security framework, standards, and policy preparation and documentation.
- NOC, SOC, Cybersecurity, Cyber Intelligence, auditing practices, vulnerability analysis, malware analysis, forensic analysis, incident handler.
- Deep understanding of network protocols, firewalls, intrusion detection/prevention systems (IDS/IPS), VPNs, and secure network architecture design.
- Ability to handle security incidents, perform digital forensics, and conduct incident response procedures effectively.
- Analytical thinker, leadership, Open for learning, self-starter, quick learner, excellent communicator, well organized, research oriented, maintain positive working relationships and an excellent team player and also an individual contributor.

TECHNICAL SKILLS TECHNOLOGIES :

Tools:	Trend Micro: Apex One - Endpoint Security Solution, IWSaaS- Interscan Web Security as a Service IMSVa - Interscan Messaging Endpoint Security, TMES - Trend Micro Email Security, Trend Micro XDR, QRadar, McAfee DLP (Trellix), Netskope, Microsoft Purview, Splunk and CrowdStrike.
Others:	Microsoft, MS Office, Jira, Service Now, Microsoft Defender, Microsoft Intune, Remedy.
OS:	Windows, Linux, Cisco IOS, Fortinet OS, Checkpoint OS.
Cloud:	Microsoft Azure, AWS
Security:	Splunk SIEM, Data Loss Prevention (DLP), Malwarebytes Anti-Malware,
Security Frameworks:	ISO 27001, CIS, NIST, Cyber Kill Chain, Infotech Security Framework
Network Security:	Juniper, Checkpoint, Cisco Routing & Switching, Fortinet, WatchGuard.
Forensic:	FireEye Ax, FireEye Nx, Trend Micro, Dark Trace, TrapX
Assessment:	Splunk, Nessus
Scripting:	JavaScript, C++, SQL, HTML

EDUCATIONAL QUALIFICATIONS & CERTIFICATIONS

- Master's in information technology security - Technological University of Mexico - Mexico City
- Bachelor's degree in computer systems engineering - University of the Mexican Republic - Mexico City
- Certification of Lead Auditor ISO/IEC 27001
- Certification of ISO 27001, Pen testing and Social Engineering.
- Ransomware Identify, Protect, Detect, Recover
- Studying for CompTIA Security+
- Studying for GIAC Certified Incident Handler

PROFESSIONAL EXPERIENCE

Client: Santander | USA

March 2024 – To Date

Role: Cyber Security Engineer

Project: Santander Bank (US), is a subsidiary of the Spanish multinational banking group Banco Santander. Santander US provides banking, lending, investing, and asset management services tailored to meet the diverse needs of its customers. As a prominent player in the U.S. banking sector, Santander US plays a significant role in supporting economic growth and financial stability across the country, while also contributing to Banco Santander's global presence and strategic objectives.

Responsibilities:

- Led and orchestrated cybersecurity initiatives aimed at safeguarding critical information assets across all USA operations and entities, ensuring data integrity and confidentiality.
- Interfaced with firewalls, intrusion protection, web proxy, antivirus, SIEM, vulnerability scanning, and other key threat countermeasures to analyze and investigate data sources, providing insights into emerging trends and threats.
- Troubleshooted customer policies and controls, conducted on-demand vulnerability scanning and compliance monitoring to uphold agency security standards.
- Documented and investigated security events, notified appropriate stakeholders, and participated in event resolution processes.
- Collaborated with technical teams for security incident remediation and communication, promoting cross-departmental collaboration and communication.
- Analyzed and proposed solutions for information security issues based on knowledge of industry-leading products and services.
- Facilitated cross-department collaboration to ensure effective installation, monitoring, and operation of security processes, procedures, and tools.
- Reviewed and analyzed anomalous data activity events, monitored for potential loss of sensitive data, and conducted thorough analysis of reported security incidents.
- Adhered to established Data Protection playbooks and identified opportunities for enhancing existing monitoring and response processes.
- Collected and analyzed event metrics for Data Loss Prevention (DLP) Key Risk Indicators (KRI) and Key Performance Indicators (KPI) reporting.

Environment: Security Operations, Incident Response, Threat Intelligence, SIEM, DLP, SOAR, QRadar, McAfee DLP (Trellix), Netskope, Microsoft Purview, Splunk and CrowdStrike.

Project: Afore XXI Banorte is Mexico's leader in pension fund administration, managing Ps 640 billion, making it one of the nation's largest institutional investors, invest in a variety of financial instruments, including government bonds, stocks, and other assets, to generate returns for their clients and is an important investor in all of the Mexican public stock markets, such as government securities, credit companies, qualified credit, certificates of capital development (CKD), project investment certificates (CerPI) and real estate trusts (Fibras).

Responsibilities:

- Led and orchestrated cybersecurity initiatives aimed at safeguarding critical information assets.
- Demonstrated expertise in implementing comprehensive strategies to proactively mitigate security threats, emphasizing incident management, threat hunting, cloud security, and Data Loss Prevention (DLP).
- Contributed to the enhancement of security posture by generating innovative approaches for incident response, implementing robust threat hunting methodologies, ensuring the security of cloud-based environments and pen test.
- Conducted detailed system security reports, involving the meticulous collection, analysis, and summarization of data and emerging trends.
- Collaborated closely with stakeholders to gather requirements and create detailed documentation.
- Formulated and executed risk assessments to identify potential vulnerabilities and devised proactive measures to fortify the organization's cybersecurity framework.
- Spearheaded the development and implementation of security awareness programs, fostering a culture of vigilance among employees and stakeholders.
- Oversaw the deployment of advanced cybersecurity tools and technologies, ensuring the continuous improvement of the organization's security infrastructure.
- Facilitated regular training sessions for staff members to enhance their understanding of cybersecurity best practices and to stay abreast of the latest threats and attack vectors.
- Established and maintained relationships with external cybersecurity organizations, fostering information sharing and staying informed about industry trends and emerging threats.
- Played a key role in the creation and enforcement of security policies, ensuring alignment with industry standards and compliance with relevant regulations.
- Collaborated with IT teams to integrate security measures seamlessly into the organization's existing infrastructure and applications.
- Conducted periodic security audits to assess the effectiveness of implemented security measures and recommended adjustments based on the findings.
- Led cross-functional incident response teams during cybersecurity events, coordinating efforts to contain and eradicate threats while minimizing potential impact.

Environment: Security Standards and Framework, ISO 27001, documentation of guidelines and procedures, Phishing attacks, malware attacks, Endpoint Protection, Audit, Stakeholder Management, Vulnerability Management, Trend Micro Apex One - Endpoint Security Solution, IWSaaS - Interscan Web Security as a Service, IMSVA - Interscan Messaging Endpoint Security, TMES - Trend Micro Email Security, Trend Micro XDR, Azure.

Project: Perficient, Inc. is a global digital consultancy. The company's efforts include enterprise mobile applications, creative services, marketing, digital strategy, Internet of Things, information technology, management consulting, custom development, and platform implementations.

Responsibilities:

- Led dynamic project management initiatives, guiding clients towards regulatory compliance and fortifying their networks against evolving threats.
- Experience in orchestrating comprehensive Cybersecurity assessments, leveraging frameworks like NIST Cybersecurity Framework and ISO 27001 to meticulously evaluate organizational security postures.
- Led and orchestrated cybersecurity initiatives aimed at safeguarding critical information assets.
- Pivotal role in fostering transparent communication with executive stakeholders, facilitating informed decision-making processes, and aligning strategic objectives with security initiatives.
- Championed the integration of industry-specific compliance requirements into cybersecurity projects, ensuring clients' adherence to regulatory standards such as GDPR, HIPAA, and other relevant frameworks.
- Applied advanced threat intelligence analysis to stay ahead of emerging cyber threats, providing clients with proactive recommendations to enhance their security resilience.
- Developed and implemented incident response plans, conducting regular drills to validate the effectiveness of response strategies and refine them based on lessons learned.
- Collaborated with legal and privacy teams to address legal and regulatory implications related to cybersecurity incidents, ensuring a comprehensive and compliant approach.
- Advised on the design and implementation of secure development practices, embedding security into the software development life cycle.
- Established and maintained relationships with regulatory bodies, staying informed about changes in compliance requirements and facilitating timely adjustments to security practices.
- Conducted training sessions for client teams on cybersecurity best practices, empowering them to actively contribute to the overall security posture.
- Contributed to the development of cybersecurity policies and procedures, ensuring alignment with industry standards and regulatory frameworks.
- Played a key role in the creation and execution of tabletop exercises and simulations to evaluate organizational readiness for various cyber threats.
- These additional responsibilities further highlight the depth of involvement in regulatory compliance, threat intelligence, incident response, and collaboration with legal and development teams to create a holistic cybersecurity approach.

Environment: Security Standards and Framework, ISO 27001, documentation of guidelines and procedures, Phishing attacks, malware attacks, Endpoint Protection, Audit, Stakeholder Management, Vulnerability Management.

Client: COLTOMEX | Mexico

March 2018 – April 2019

Role: Cyber Security Engineer

Project: Coltomex is a company which provides Business Process Outsourcing, Digital Marketing Engineering, Bigdata & Business Intelligence services.

Responsibilities:

- Demonstrated expertise in protection of personal data and banking customer information safeguarding the information of databases of Mexican banks such as Bancomer, Banamex, HSBC, Banorte, etc.
- Proficient in carried out cybersecurity audits and analyzes for the discovery of vulnerabilities and threats in the company.
- Proficient in monitoring and detecting security events from SIEM and I collected logs from different security technologies also I perform.
- Conducted in-depth assessments and audits of third-party vendors and partners, ensuring the security of shared data and promoting a secure ecosystem.
- Collaborated with internal legal teams to navigate complex data protection regulations, ensuring compliance with local and international privacy laws.
- Developed and implemented robust data encryption strategies, safeguarding sensitive information during transmission and storage.

- Led the creation and execution of customized cybersecurity training programs for employees, fostering a security-conscious culture within the organization.
- Played a pivotal role in the development and maintenance of a threat intelligence program, staying abreast of industry-specific threats and sharing relevant insights with internal stakeholders.
- Implemented and managed security awareness programs for banking customers, enhancing their understanding of potential threats and promoting secure online practices.
- Spearheaded the integration of advanced authentication mechanisms, such as multi-factor authentication, to enhance access controls and protect sensitive systems.
- Collaborated with internal and external legal teams to conduct privacy impact assessments, ensuring the responsible and ethical handling of personal and financial data.
- Engaged in continuous professional development to stay current with evolving cybersecurity trends and emerging technologies in the financial sector.
- These additional responsibilities further emphasize the focus on protecting banking customer information, data encryption, third-party assessments, and proactive security measures to enhance overall cybersecurity resilience.

Environment: Documentation of guidelines and procedures, ISO 27001, DLP Symantec, Splunk, Phishing Emails, CISCO technologies and Firewalls like Fortinet, Check Point and Palo Alto.

Client: CYCSAS | Mexico

June 2017 – March 2018

Role: IT Security engineer

Project: CYCSAS is a cloud consulting & SI and cybersecurity company, they design and develop safe environments for their clients.

Responsibilities:

- Collaborated in orchestrating the seamless implementation and optimization of various firewall brands, from inception to full-scale deployment.
- Conducted evaluations of existing infrastructure, vigilant monitoring of network systems, timely updates, rapid threat detection, and containment measures.
- Excelled in proficiently addressing issues through remediation, providing robust technical support, and conducting both preventive and corrective maintenance measures.
- Facilitated effective communication between business and technical teams, streamlining project workflows.

Environment: Check Point, Fortinet, Palo Alto, FireEye, LogRhythm (SIEM), Malwarebytes Anti-Malware, Nessus, CyberArk, Antivirus.

Client: TELMEX | Mexico

September 2016 – June 2017

Role: Intrusion Analyst Jr

Project: Telmex is a Mexican telecommunications and IT services company, provides fixed-line telephony services, including long-distance and international calling and Internet access services.

Responsibilities:

- Proficient in configuring and meticulously monitoring intrusion detection systems.
- Proficient in deciphering and analyzing network traffic and log files, I swiftly identify vulnerabilities and proactively mitigate potential threats.
- Had pivotal role in testing innovative programs aimed at fortifying our data protection measures and ensuring regulatory compliance.
- Have a keen eye for detail, I continuously refine processes to bolster network security, safeguarding our digital assets against evolving cyber threats.

Environment: DarkTrace, Deep Discovery Inspector, TrapX, FireEye Ax, FireEye Nx, Cisco FireAMP, Recommendations to clients based on malware analysis, Phishing email analysis. Cyber intelligence: Monitoring of Social Networks (Facebook, Twitter, OIMonitor, Open sources), Monitoring of IRC channels (Internet Relay Chat), DeepWeb and Darknet monitoring, Maltego

Client: TELMEX | Mexico

March 2015 – September 2018

Role: NOC & SOC Security engineer

Project: Telmex is a Mexican telecommunications and IT services company, provides fixed-line telephony services, including long-distance and international calling and Internet access services.

Responsibilities:

- Experience in analyzing and swiftly responding to security threats across diverse platforms and security technologies has been a cornerstone of my expertise.
- Pivotal role in spearheaded the proactive monitoring of vital network components and dependencies, promptly resolving issues pertaining to servers, networks, and telecommunications.
- Collaborated with troubleshooting and technical support ensured seamless operations for both network infrastructure and client network devices-
- Actively collaborated with cross-functional teams to implement robust security measures and incident response protocols, fortifying the defense against emerging cyber threats.
- Optimized performance and enhanced resilience, contributing to the overall operational efficiency and security posture of the organization.

Environment: Remedy, SecureDoc, Trend Micro System, FortiGate, Juniper, Check Point, WatchGuard, ASDM (Cisco Adaptive Security Device Manager), Routing & Switching, Cisco Unified, Communications Manager (CUCM), Cisco Services for IPS, Cisco Security MARS (Suspicious activities), Solar Winds, SecureCRT, SSH, Telnet

Client: SCAT (IBM Channel) | Mexico

July 2014 – January 2015

Role: IT Consultant

Project: Computer and High Technology Services

Responsibilities:

- Provided comprehensive customer support, delivering tailored solutions and resolving technical issues promptly to ensure optimal client satisfaction.
- Conducted thorough audits of internal processes, identifying inefficiencies, and recommending strategic improvements to streamline operations and enhance productivity.
- Managed Customer Relationship Management (CRM) systems, maintaining accurate records and utilizing data-driven insights to drive targeted marketing campaigns and nurture client relationships effectively.
- Experience in analyzing and swiftly responding to security threats across diverse platforms and security technologies.

Environment: support, delivering tailored solutions, Internal processes, CRM.
