

Andrew Hong

Senior Cloud Network Engineer | Security Engineering
andrw.hong@gmail.com | (206) 240-0400 | linkedin.com/in/hongandrew

PROFESSIONAL SUMMARY

Security-focused systems engineer with 12+ years of experience leading large-scale infrastructure deployments, driving vulnerability remediation, and enforcing secure system design. Proven ability to assess risk, improve incident response, and implement scalable security solutions in distributed and high-availability environments. Adept at aligning engineering execution with security and product goals, reducing exposure while increasing operational resilience and uptime.

CORE SKILLS

- Systems Security Engineering
- Storage / Compute Reliability (NAS, SAN, Hyper-V, Azure, VMWare)
- Air-gapped/Sec-hardened Environments
- Linux, Unix, Windows Server Administration
- Root-cause Analysis and Incident Triage
- Monitoring & Observability (Custom Dashboards, Geneva)
- Infrastructure Automation (PowerShell, Bash, C#)
- Project & Program Management
- Network Reliability (LACP, VPN, LDAP, SMB Tuning)
- Secure and Compliance (FIPS, AES256, CVE Patching)

PROFESSIONAL EXPERIENCE

Senior Cloud Network Engineer

Microsoft Corporation — Sep 2020–Present
IDNA | TSS Storage and Network Team

- Led full lifecycle of tech refreshes across Production and PPE Isilon clusters using Flex On-Demand (FOD), saving \$2.25M in operational costs.
- Delivered zero-downtime cutovers using Isilon's native automation tools and coordinated PM efforts post-project manager departure.
- Developed and deployed custom dashboards to monitor Isilon health, utilized by shiproom and service verticals.
- Introduced NIC Teaming/LACP to increase storage availability and eliminate network hickups during failover.
- Acted as incident response liaison during Red Team exercises, helping validate lateral movement protection and lockdown measures.

- Participated in pre-mortem High-Security Environment meetings to mitigate risks in multi-region deployments.
- Collaborated with Microsoft PKI team to architect resilient PKI storage solutions using hyper-converged (S2D) designs.

Service Engineer II

Microsoft Corporation — Oct 2013–Sep 2020

MSIT | Agile Labs and Secure Infrastructure Teams

- Supported the lifecycle management of global SAN/NAS infrastructure, with a focus on improving reliability and performance across data centers.
- Led decommissioning of legacy storage (NetApp, VNX, XtremIO, 3Par, Isilon) and compute (Cisco UCS), consolidating systems into secure Ring/Fence architectures.
- Partnered with network and service teams to analyze data storms and deploy automated monitoring scripts for anomaly detection.
- Authored custom tools and CRON scripts to extract diagnostics, significantly reducing troubleshooting cycles.
- Delivered early-stage dashboard metrics (usage, latency, auth issues), enabling proactive storage capacity and network planning.
- Participated in infrastructure modernization initiatives to prepare for Azure hybrid integration and improve service handoff between teams.

Additional Experience

Voltari – Sr. Systems Engineer (Aug–Oct 2013)

Motricity – Sr. Virtual & Storage Systems Engr (2011–2013)

Bellevue Christian School – IT Program Manager (2000–2011)

SECURITY & COMPLIANCE INITIATIVES

- Proactively upgraded all Isilon clusters to FIPS-compliant OS with AES256 encryption, eliminating legacy RC4 vulnerabilities.
- Identified and patched a critical Dell CVE with rapid coordination and air-gapped firmware deployment.
- Developed a plan to migrate corp-facing shares to secure domains using SMB to mitigate against security vulnerabilities.
- Developed purge automation to reduce file retention windows and support Microsoft's Security First Initiative (SFI).
- Executed root cause analysis and corrective actions for security incidents and system outages, reducing recurrence and improving recovery readiness.
- Collaborated with service and security teams to define secure architecture guardrails for enterprise infrastructure projects.

D&I, MENTORSHIP & TEAM IMPACT

- Mentored multiple engineers, including new hires with no prior storage experience, through structured onboarding and hands-on labs.
- Championed inclusive team practices by offering cross-role training, knowledge sharing sessions, and pairing with PM and service verticals.
- Facilitated weekly syncs to align on Ansible, Geneva, and C# automation strategies.

EDUCATION & DEVELOPMENT

- Seattle Pacific Univ. & Bellevue College – Business Admin Studies
- Azure Networking AZ-700 courses (Completed)
- C#, Python, Ansible (In Progress)
