PROFILE

Senior .NET Full Stack Engineer with over **15** years of expertise in designing, developing, and deploying robust, scalable web applications in the healthcare and financial domains. I specialize in **C#, ASP.NET Core, .NET 6/7/8, Web API, and Entity Framework** for backend development, paired with **Angular, React, and Vue.js** for building dynamic, responsive front-end interfaces. My skill set includes microservices architecture, **RESTful API** development, cloud-native solutions using **Azure** and **AWS**, and message processing with **RabbitMQ** and **Kafka**. I am also proficient in **CI/CD** pipeline automation, **Docker, Kubernetes**, and database management with **SQL Server** and **MongoDB**. A strong advocate of **Test-Driven Development (TDD)** and **Agile** methodologies, I ensure high-quality code and timely delivery while optimizing performance and enhancing user experience. I have a proven track record of leading successful projects in secure, compliance-driven environments, collaborating effectively with cross-functional teams.

EDUCATION

Bachelor of Science in Computer Information Systems
Marygrove College

08/2005 – 05/2009 | Detroit, Michigan

PROFESSIONAL EXPERIENCE

Senior .NET Full Stack Engineer/Software Architect/Team Lead

Centene Corporation

March 2016 – June 2025 | St. Louis, Missouri, USA

- Led the development of the **Data Integration and Management System (DIMS)** using **C#, .NET Core 3.1, .NET 5/6/7/8**, enabling real-time data transformation across enterprise systems.
- Architected the **DIMS** backend with microservices architecture using **.NET 5/6/7**, integrating event-driven messaging via **Kafka** and **RabbitMQ** for high-volume data processing, ensuring compliance with **HL7** and **HIPAA** standards for healthcare systems.
- Integrated with **Electronic Medical Record (EMR) systems** within DIMS, facilitating real-time health data interoperability, enhancing patient record access and integration across healthcare applications.
- Designed and implemented **RESTful APIs** using **C# 9.0 to C# 11.0** and **ASP.NET Core 5 and 6**, managing data mappings in **Neo4j** and **MongoDB** for enhanced data processing and retrieval, adhering to **HIPAA** and **HL7** standards for secure healthcare data exchange.
- Built and deployed the **DIMS Admin Gateway** and **Admin APIs** with **ASP.NET Core 6 and 7**, integrating **Kafka** to handle secure messaging across different environments (**Production, Test, Development**).
- Designed and integrated an AI-powered chatbot using **OpenAI's GPT-based models** within the DIMS platform, enabling natural language understanding for user support, onboarding, and troubleshooting.
- Leveraged **Azure OpenAI** and **AWS Lex** for NLP processing, context retention, and seamless integration with existing microservices, enhancing response accuracy.

- **Developed and maintained WCF services for secure data exchange**, implementing SOAP-based communication for legacy system integrations within the DIMS platform, ensuring seamless interoperability and data integrity across distributed applications.
- **Optimized WCF service performance** by configuring bindings and throttling, enhancing data throughput and reducing latency for high-demand healthcare data transactions, while maintaining compliance with industry security standards like HIPAA.
- Integrated **Adobe Experience Manager (AEM 6.5)** with **.NET Core microservices** to deliver personalized, HIPAA-compliant content across healthcare portals..
- Developed custom **AEM** components and workflows using **Java**, **Sling**, and **HTL** to streamline publishing and enhance multi-channel content delivery.
- Developed microservices for the **DIMS Transformer** using **.NET 6 and 7** and **Kafka**, responsible for consuming and transforming data based on predefined mappings in **Neo4j**.
- Managed real-time messaging and event processing with **Kafka** and **RabbitMQ**, optimizing data synchronization between distributed microservices and ensuring message durability and fault tolerance.
- Deployed applications in **Azure Kubernetes Service (AKS)** using **Docker** containers and **.NET Core 5 and 6**, ensuring high availability and scalability.
- Utilized **Azure App Service**, **Azure Functions**, and **Azure Service Bus** for deploying serverless applications, messaging, and background processing workflows within the **DIMS platform**.
- Integrated **Azure Blob Storage**, **Azure SQL Database**, and **Azure Redis Cache** for optimized data storage and caching strategies across cloud services.
- Configured **CI/CD pipelines** using **Azure DevOps**, automating the build, test, and deployment processes for **.NET 6 and 7** applications, resulting in rapid release cycles.
- Developed dynamic and responsive user interfaces for **DIMS** using **Angular 16/17/18**, **React 17/18**, and **Vue.js 2/3**, with **TypeScript** and **JavaScript**, creating schema mapping and error management systems.
- **Next.js with React 17/18** and **Nuxt.js with Vue 3** to implement **server-side rendering (SSR)** and static site generation, improving SEO, load times, and performance for DIMS. This approach optimized the user experience across data-intensive pages and ensured faster content delivery on both React and Vue interfaces.
- Enhanced **state management** by implementing **NgRx for Angular** and **Redux for React**, ensuring efficient data handling and synchronization, while leveraging **Vuex for Vue** for consistent state across user interfaces.
- Utilized **Angular**, **React**, and **Vue** with advanced front-end libraries and frameworks like **HTML5**, **CSS3**, **SCSS**, and **Bootstrap 5**, delivering modern, responsive, and accessible user interfaces for DIMS.
- Created a mobile-friendly version of the **DIMS UI** using **Xamarin** and **Blazor** and **.NET 5**, ensuring a seamless and intuitive user experience across web and mobile platforms.
- Utilized **AWS Lambda** for serverless computing, implementing **Python**-based microservices for on-demand data processing workflows in **AWS**.
- Integrated **AWS S3**, **AWS RDS**, and **AWS DynamoDB** for scalable storage, relational database management, and **NoSQL** data solutions, optimizing the **DIMS architecture** for cloud-native environments.
- Implemented **JWT (JSON Web Tokens)** with **OAuth 2.1** for secure user authentication and authorization across distributed systems, ensuring seamless token-based security.
- Implemented **Twilio API** for real-time communication features, including **SMS** notifications and alert systems for critical **DIMS updates**.
- Developed **WebRTC** integration for real-time communication capabilities within the **DIMS platform**, facilitating secure video and audio connections for internal collaboration.
- Implemented **Entity Framework Core 6 and 7** for data access, optimizing complex query handling and improving database performance across large datasets.
- Implemented **AWS CloudFormation** and **Azure Resource Manager (ARM)** templates to automate infrastructure provisioning and ensure consistency across multiple cloud environments.

- Leveraged **Terraform** for **Infrastructure as Code (IaC)** to manage **Azure** and **AWS** resources, streamlining cloud infrastructure management and ensuring version control.
- Integrated **AWS CloudWatch** and **Azure Monitor** for real-time monitoring and logging, ensuring proactive identification and resolution of system issues.
- Integrated **OAuth 2.0** and **OpenID Connect** with **ASP.NET Core Identity**, ensuring secure authentication and authorization, adhering to **HIPAA** compliance standards.
- Implemented **SSL/TLS** encryption between the **Angular 15** frontend and **ASP.NET Core 6** backend to secure sensitive data transmissions.
- Monitored application performance using **Prometheus** and **Grafana** for real-time metrics visualization of containerized **.NET Core** applications.
- Leveraged **Oracle Database 21c** for high-performance data management in the **DIMS** platform, optimizing storage and retrieval of healthcare data while ensuring compliance with **HIPAA** and **HL7** standards.
- Deployed the **ELK stack** (**Elasticsearch**, **Logstash**, **Kibana**) for centralized logging and error monitoring, improving the speed of issue resolution and log analysis.
- Optimized database performance using **SQL Server** and **MongoDB**, employing techniques like indexing, partitioning, and query caching for large datasets such as medical records and data lineage tracking.
- Architected and optimized **DIMS for a multi-tenant SaaS environment**, enabling scalable, secure, and customizable deployments across multiple clients. Implemented resource isolation, tenant-specific configurations, and efficient data access controls to support high availability and secure data handling in line with industry best practices for **SaaS** platforms.
- Developed automated data processing pipelines using **Python** and integrated them into the **DIMS** system to enhance data ingestion and transformation workflows.
- Created and deployed **Python**-based microservices on **AWS Lambda** for serverless architecture, improving scalability and reducing operational overhead.
- Leveraged **Java 11**, **Spring Boot 3** and **Node.js** to develop **REST APIs** and microservices, integrated with **DIMS** for efficient data processing and system interoperability.
- Managed **DIMS** deployments and performed system-level operations on **Red Hat Linux** servers, ensuring optimized performance and high availability in production environments.
- Implemented **AI-driven data anomaly detection** within **DIMS**, leveraging machine learning models to identify irregular patterns in healthcare data streams. Enhanced data accuracy, reduced manual intervention, and improved compliance with healthcare standards such as **HIPAA** and **HL7**.
- Integrated an **AI-powered chatbot within DIMS** to assist users with real-time support and troubleshooting, leveraging **NLP** for understanding user queries and providing context-specific responses. Reduced response times for common issues, streamlined user interactions, and improved overall user satisfaction by offering 24/7 assistance.
- Utilized **Kafka** and **Java** to handle real-time messaging and data synchronization between distributed systems.
- Wrote unit tests and integration tests using **xUnit** and **Selenium**, ensuring the robustness of **.NET** applications and high-quality code delivery.
- Mentored junior developers on **.NET Core 3.1** to **8.0**, **C#**, and cloud-native technologies such as **Docker** and **Kubernetes**, fostering skill development and team collaboration.
- Led **Agile** ceremonies, including **sprint planning** (using **Jira**), **daily stand-ups** (with **Microsoft Teams**), and retrospectives (facilitated through **Confluence** and **Miro**), ensuring continuous improvement and alignment within the development team.

.NET Full Stack Developer

American Express

June 2009 – January 2016 | New York, NY, USA

- Key member of the **R42 team**, contributing to the development and maintenance of **American Express's**

loyalty rewards platform with a focus on backend and frontend development using **C#** and **.NET**.

- Engineered backend services using **C#**, **.NET Framework 4.5**, **.NET Framework 4.6**, and **.NET Framework 4.7**, implementing business logic for **loyalty rewards programs**, including partner integrations with **Delta**, **Hilton**, and **Amazon credit cards**.
- Designed and developed microservices architecture using **C#**, **.NET Framework 4.6**, and **.NET Core 1.0**, ensuring scalability and performance for international and U.S. market segments.
- Developed **ASP.NET Core** APIs using **C#**, improving interoperability and real-time data exchange for backend services within the **R42 team**.
- Built responsive user interfaces using **AngularJS**, **Angular 1**, **Angular 2**, and **React 15**, integrating frontend with backend services developed in **.NET** and **ASP.NET Core**.
- Implemented reusable components with **Angular** and **React**, creating a modular frontend architecture that integrated with **.NET** backend services, ensuring high maintainability.
- Collaborated on the integration of **AEM with ASP.NET** backend services to manage marketing content for loyalty rewards platforms across global markets.
- Customized **AEM** templates and components to support dynamic offers and branding requirements, improving content deployment speed and consistency.
- Integrated **RabbitMQ** with **ASP.NET Core** backend services, enabling real-time messaging and communication between services for efficient transaction processing.
- **Salesforce Integration:** Integrated Salesforce data with **.NET** services, enabling seamless data flow between the CRM and internal platforms.
- Developed custom **Salesforce Lightning components** to enhance the user experience, delivering tailored features to meet business needs.
- **Sitecore Content Management:** Managed content and user experience on Sitecore, ensuring smooth digital content delivery and integration with backend services.
- **Legacy Platform Migration:** Led the migration of outdated loyalty systems to **.NET Core** and Azure-based microservices, enhancing performance and scalability.
- Coordinated the **migration of legacy .NET Framework applications** to modern architectures, introducing updated security and compliance protocols.
- Integrated **Microsoft Dynamics 365** with **.NET** services, allowing seamless access to customer relationship data and enhancing loyalty platform capabilities.
- Developed custom modules and workflows within **Microsoft Dynamics 365** to streamline CRM processes and align customer interactions with loyalty program goals.
- Integrated **SharePoint** with **.NET** applications for document management and collaboration, ensuring secure and organized content storage for **R42 team** projects.
- **Data Transformation and Mapping:** Engineered processes to convert legacy data formats into optimized schemas compatible with modern **.NET** services.
- Ensured business continuity by **upgrading legacy systems**, minimizing downtime and optimizing transaction handling in **.NET Core**.
- **Big Data Processing:** Applied big data techniques to handle and process large financial transaction datasets, ensuring accuracy and compliance with regulatory standards.
- Utilized **Azure Virtual Machines (VMs)**, **Azure Virtual Networks**, and **Subnets** to deploy and scale backend services built in **C#** and **.NET**, ensuring high availability and secure infrastructure.
- Developed **C#-based microservices** with **.NET Core 1.0** and deployed them on **Azure**, improving scalability and reliability across multiple environments.
- Built backend APIs using **C#**, **ASP.NET**, and **ASP.NET Core**, enabling integration with loyalty partners and enhancing transaction processing efficiency within the **R42 team**.
- Spearheaded the design and development of dynamic user interfaces in **Angular** and **React**, integrating them with **ASP.NET Core** backend services for the **R42 loyalty platform**.
- Managed application state using **Redux** and **NgRx** with frontend frameworks, ensuring seamless data flow between frontend components and **ASP.NET Core** APIs.
- Adopted **Test-Driven Development (TDD)** practices, writing unit and integration tests in **C#** using **xUnit**

for **.NET** and **.NET Core** applications within the **R42 team**.

- Developed backend services in **C#** with **ASP.NET Core**, handling large-scale transaction processing and integrating with messaging systems like **RabbitMQ** and **Kafka** for real-time data flow.
- Employed **Behavior-Driven Development (BDD)** with **Cucumber** to ensure that **C#** and **.NET** applications met business logic requirements.
- Utilized **Azure Functions** and **AWS Lambda** for serverless processing in conjunction with **C#** backend logic, improving scalability for specific business processes.
- Managed on-premises deployments using **OpenShift** and integrated **C#** and **.NET** services, ensuring compliance with American Express's security protocols for handling financial data.
- Deployed containerized **C#** services built with **.NET Core** using **Docker** and **Kubernetes**, ensuring efficient deployment in both on-premises and cloud environments.
- Containerized and orchestrated microservices using **Docker** and **Kubernetes**, ensuring efficient management of **C#** and **.NET**-based services across environments.
- Collaborated with cross-functional teams, including frontend and backend developers, product managers, and QA engineers within the **R42 team**, delivering features aligned with business objectives.
- Participated in Agile ceremonies within the **R42 team**, ensuring continuous improvement and timely delivery of **C#** and **.NET**-based projects.

SKILLS

Programming Languages:

Backend: C#, Java, Python, TypeScript

Frontend: JavaScript, TypeScript, HTML5, CSS3, SCSS

Frameworks & Technologies:

Backend: .NET Core (1.0–8.0), ASP.NET Core, Web API, Entity Framework Core, Java (11+), Spring Boot 3

Frontend: Angular (1–16), React (15–18), Vue.js (2/3), Blazor

Message Queuing: RabbitMQ, Kafka

API Development: RESTful APIs, WebRTC, Twilio API

Authentication & Security: JWT, OAuth 2.0/2.1, OpenID Connect, SSL/TLS, HIPAA, HL7

Testing: xUnit, Selenium, NUnit, MSTest

Development Practices: Test-Driven Development (TDD), Behavior-Driven Development (BDD), Agile, Scrum

Cloud & DevOps:

Cloud Platforms: Microsoft Azure, Amazon Web Services (AWS)

Azure Services: Azure Kubernetes Service (AKS), Azure App Service, Azure Functions, Azure Service Bus, Azure Blob Storage, Azure Redis Cache, Azure SQL Database

AWS Services: AWS Lambda, AWS S3, AWS RDS, AWS DynamoDB

Containerization: Docker, Kubernetes, OpenShift

Infrastructure as Code (IaC): Terraform, AWS CloudFormation, Azure Resource Manager (ARM)

CI/CD: Azure DevOps, GitHub, Jenkins, TFS, Git, PowerShell, Bash scripting

Database Management:

SQL Server, MongoDB, PostgreSQL, Neo4j

Database performance optimization (indexing, partitioning, query caching)

Monitoring & Logging:

ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, AWS CloudWatch, Azure Monitor

Development Tools & IDEs:

IDEs: Visual Studio 2022, Visual Studio Code, IntelliJ IDEA, Rider, Eclipse

Version Control: Git, GitHub, GitLab, TFS, Bitbucket

Project Management: JIRA, Azure Boards, Trello, Rational Team Concert (RTC)

Build Tools: MSBuild, Maven, Gradle

Collaboration: Microsoft Teams, Slack, Zoom
