Professional Summary:

Over 20+ Years in the IT industry as a Test Lead, Automation Architect, and Test Manager and expertise in tools like Selenium Web driver with Java, Unified Functional Testing, Squish Frog logic using Python, Proficient in end-to-end project management and bring in seasoned experience in testing applications across platforms such as GCP, AWS, AS400, SAP, Salesforce.

My career stands out for successfully delivering 80+ product releases, significantly enhancing quality.

Leading a team of 35+ members, I have expertise in domains including Hospitality, Apparel and Retail, Banking, Insurance and Capital Markets.

Domain Expertise

- Apparel and Retail
- Hospitality
- Banking and Capital Markets Insurance
- Healthcare

Skills:

- Selenium Web driver with Java, AWS Testing, HP UFT
- Postman, ReadyAPI, Yaml
- Karate, Rest Assured, Cucumber and TestNG, Mocha, Jasmine, Jest
- Framework using Next.js and NX
- Jenkins, Maven, Git, SVN
- Linux, Windows
- Jira, HP Quality Centre, MS Project SQL, Squirrel SQL, SSRS, SSAS
- Google Cloud Platform (GCP), AWS Testing

Education:

- Bachelor of Engineering - Madras University, India, Apr - 2003

Certification:

- Advance Program in Cyber Security Data Science

Professional Experience:

Hilton Hotels, Memphis

Apr 2024 - Present

Quality Assurance Specialist

- Spearheaded automation testing efforts for Hilton's Oracle Cloud transition, ensuring seamless integration and functionality of the cloud infrastructure.
- Developed robust automated test scripts using Selenium WebDriver with Java, ensuring comprehensive test coverage for cloud based applications in various browsers.
- Implemented Kafka for real-time data streaming, enhancing communication between microservices during the Oracle Cloud transition.
- Leveraged Java frameworks to streamline the development of automated test scripts, ensuring compatibility with cloud applications in a microservices environment.
- Designed scalable microservices using Java, ensuring efficient resource management and improved deployment cycles.

- Developed automated tests for microservices utilizing Kafka events to validate inter-service communication and data integrity.

Varsity Spirit, Memphis

Oct 2023 – Mar 2024

Specialist QA Manager

- Worked on Salesforce applications testing and performed Devops using Copado.
- Unit testing using Mocha, Jasmine and Jest
- Developed robust automated test scripts using Selenium WebDriver with Python, ensuring comprehensive test coverage for web applications across different browsers and platforms on Salesforce platforms.
- Implemented page object model (POM) design patterns in Python to create maintainable and reusable automation frameworks, enhancing test script readability and scalability.
- Conducted cross-browser testing using Selenium Grid and Python, enabling efficient validation of application functionality and user experience on diverse browser environments.
- Integrated Selenium automation tests with continuous integration pipelines (e.g., Jenkins) using Python scripts, enabling automated regression testing for each code commit.
- Leveraged cloud platforms like GCP and AWS for scalable and reliable testing, directly handling cloud-based application performance optimizations.
- Identified and reported software defects using Python-based Selenium tests, collaborating with development teams to prioritize and resolve issues in a timely manner.
- Optimized test execution time by implementing parallel test execution strategies in Python, leveraging Selenium Grid and multiprocessing techniques.
- Provided mentorship and guidance to team members on Selenium automation best practices and Python programming techniques, fostering knowledge sharing and skill development within the team.
- Contributed to the enhancement of existing automation frameworks by implementing new features and functionalities using Python, Selenium, and related libraries.
- Nurtured a team culture of continuous learning and skill enhancement, leading by example in adopting technologies and methods in quality assurance.

Atos-Syntel (USA), Memphis

Apr 2014 – Oct 2023

Senior Consultant / Senior Manager

- Spearheaded agile SDET teams in Sprint Planning, Reviews, and Scrum Meetings, emphasizing high-quality development of Functional, Regression, and E2E Test Cases.
- Led code review processes and Production deployments, aligning with best practices, and achieving key business objectives.
- Advanced the enhancements of Test Automation frameworks using Selenium Cucumber BDD, and developed web service automation scripts with Rest Assured API to elevate testing efficiency.
- Integrated Kafka for event-driven testing, enabling seamless communication and validation of microservices within automated test frameworks.
- Managed the automation of diverse applications, encompassing web, mobile, and Point-of-Sale systems, utilizing advanced tools like Froglogic Squish and Selenium Cucumber BDD.
- Enhanced test automation frameworks with Java, utilizing Selenium Cucumber BDD for robust functional and regression testing across diverse applications.
- Implemented the Page Object Model (POM) and End-to-End automation testing, ensuring comprehensive system integrity and quality.
- Implemented data modeling techniques to support the organization and storage of data within the warehouse, enhancing query performance and analytics.

- Utilized Google Cloud Platform (GCP) and AWS for effective cloud-based application testing, focusing on precise monitoring and proactive error resolution.
- Established data governance protocols to ensure data quality and compliance within the data warehouse, enhancing reliability for reporting and analysis.
- Utilized Spring Boot to streamline application setup and configuration, facilitating rapid development and deployment of RESTful services.
- Directed the design of CI/CD pipelines with Jenkins for microservices deployments, optimizing testing processes and leveraging cloud platforms for scalability.
- Leveraged the Spring Framework to build robust microservices, enhancing dependency injection and component management for scalable applications.
- Oversaw and supervised functional test case execution in Jira, guaranteeing meticulous issue tracking and resolution.

Cognizant Technology solutions Chennai and Australia

Dec 2005 – Feb 2014

Test Lead / Project Lead

- Expertly collaborated with Product Owners and IT stakeholders to elicit system requirements, document processes, and identify functional risks.
- Led the design and implementation of Java-based automation frameworks, enhancing the efficiency and coverage of testing processes for microservices.
- Managed comprehensive testing activities, integrating Kafka for event-driven testing and ensuring robust communication between microservices.
- Collaborated with Product Owners and IT stakeholders to define system requirements for microservices architecture, ensuring alignment with business objectives.
- Oversaw team operations, allocating tasks, providing estimates, and monitoring efforts, coupled with daily and weekly reporting to onsite coordinators.
- Conducted peer reviews of scripts and coordinated with the Manual Testing Lead for defect resolution and comprehensive test coverage.
- Administered project lifecycle management, including milestone tracking, resource management, and overseeing the software test life cycle.
- Developed key testing documents, such as Test Strategy, Test Plan, and Traceability Matrix, and authored detailed Test Scenarios and Cases aligned with functional requirements.
- Utilized Spring Framework to enhance ETL processes for seamless data integration in the data warehouse.
- Implemented Installation, Functional, Reliability, and Integration Testing across Solaris and Windows environments, enhancing testing scope and effectiveness.
- Implemented Spring Batch to automate and optimize data processing workflows within the data warehouse.

Infosys Technology Solutions Bangalore and Switzerland

Apr 2003 – Nov 2005

Test Analyst

- Meticulously crafting detailed manual test cases, ensuring comprehensive coverage of all application features and functionalities.
- Conducting thorough test executions, rigorously validating the application against specified requirements and use cases.
- Identifying, documenting, and assigning defects to developers, facilitating efficient and accurate issue resolution.
- Actively participating in Defect Triage meetings, presenting findings and collaborating with cross-functional teams to discuss and prioritize defects.

- Collaborating closely with the development team to understand application nuances, enabling effective test case execution.
- Continuously updating and refining test cases to align with evolving application features and requirements.
