

CAMILLE HICKS

Senior Software Engineer

📞 1 2137210233 @ camille.hicks910805@gmail.com 🔗 www.linkedin.com/in/camille-hicks-a228b0358
📍 Green Valley, Illinois, United States

SUMMARY

Senior Software Engineer with over **10 years of experience** building scalable, high-performance solutions using **Java, Kotlin, and Spring Boot**. Adept at developing **microservices, RESTful APIs, and cloud-native applications**. Expertise in leading **cross-functional teams**, driving the adoption of modern development practices like **Domain-Driven Design, event-driven architecture, and Agile methodologies**. Proficient in deploying and optimizing systems on **AWS**, using tools like **Kubernetes, Terraform, and Docker**. Successfully led the development of high-traffic platforms, integrated advanced technologies like **machine learning** for fraud detection, and enhanced backend performance with **PostgreSQL, NoSQL, Redis, and Kafka**. Passionate about improving code quality through **DevOps, CI/CD**, and automated testing frameworks, and experienced in driving significant efficiency improvements in both backend and frontend solutions.

EXPERIENCE

10/2023 - Present

Missouri City, United States

• Senior Software Engineer

Teal Towns

- **Built a microservice-based, event-driven backend** with **Domain-Driven Design, Kotlin, Next.js,** and **AWS** to drive **performance** and **scalability** for the **financial trading platform**.
- Built a **high-performance backend** with **Kotlin, Spring Boot, and Hibernate** to deliver reliable **APIs**, manage messaging, and optimize **data access** for **Sentri Pay**.
- Optimized **PostgreSQL** and **NoSQL databases** on **AWS**, implemented **Redis caching**, and focused on **query optimization** and **performance tuning** to support **Teal Towns's scalability** and high-traffic demands.
- Developed **RESTful APIs, GraphQL, and gRPC services**, and implemented an **event-driven system** using **Kafka, RabbitMQ** for **real-time data processing** to support the scalability and integration of **Sentri Pay's platform**.
- Developed a **high-performance frontend** using **React, Next.js, TypeScript, and Redux**, implementing **lazy loading** and optimized **state management** to enhance **load times**.
- Streamlined **AWS cloud infrastructure** using **Git, Docker, Kubernetes, Terraform, AWS CodePipeline, and Jenkins** to automate **deployments**, manage version control, and enhance scalability for **Sentri Pay**.
- Enhanced productivity and collaboration by integrating third-party services like **Stripe, PayPal, Google, and Facebook** for secure, seamless transactions, improving team efficiency and **user experience** on **Teal Towns's platform**.
- Implemented a **fraud detection model** using **Python** and **machine learning** to enhance **fraud prevention** at **Teal Towns**.
- Implemented strong **security** between **microservices** and external communications using **OAuth 2.0, JWT, and secure API authentication** to ensure **data privacy** and **integrity** across **Teal Towns's platform**.
- Led **QA efforts** using **Mockito, Jasmine, and Karma** for testing, while managing tasks in **Atlassian Jira** to ensure **platform reliability** through **collaborative code reviews** at **Teal Towns**.

03/2021 - 10/2023

MN, United States

• Senior Software Engineer

BestMark

- Led the development of the Bolt SaaS Platform using **microservices architecture, event-driven design, DDD, Java, Angular, and AWS**.
- Built core backend systems using **Java 17, Spring Boot, Spring MVC, JDBC**, ensuring system robustness and efficiency.
- Enhanced communication architecture with **Kafka, RabbitMQ, and GraphQL, gRPC services**, enabling real-time data processing and seamless inter-service communication.
- Optimized databases and caching using **MongoDB, AWS DynamoDB, and Redis** to support Bolt's transaction demands and enhance data access performance.
- Built a high-performance micro-frontend with **Angular, TypeScript, NgRx, and RxJs**, utilizing lazy loading and optimized state management to improve load times.
- Implemented DevOps on **AWS cloud** using **Git, GitHub Actions, Docker, Kubernetes EKS, Jenkins, and Terraform**, leveraging services like **AWS EC2, S3, and AWS Lambda** to enhance scalability and streamline deployments.
- Led QA efforts with **Mockito, Jasmine, Karma, Agile methodologies, and Atlassian Jira** to enhance reliability and reduce bugs.

EXPERIENCE

11/2019 - 03/2021

VA, United States

Senior Angular Developer

Glass.com

- Architected a scalable Patient Management System using **microservices** and **event-driven architecture** with **Java** and **Angular**, ensuring scalability and adaptability for future growth.
- Built a high-performance backend with **Java 8**, **Spring Boot**, and **JDBC**, delivering reliable APIs and efficient data access.
- Designed and implemented an event-driven architecture with **RESTful APIs** and **RabbitMQ** to enable real-time data processing and support platform growth.
- Optimized data architecture with **PostgreSQL** and **AWS RDS**, improving query speeds, data retrieval efficiency, and response times for high-traffic demands.
- Developed a high-performance frontend with **AngularJS 1.8**, **TypeScript**, **NgRx**, and **RxJS**, optimizing state management and load times with lazy loading.
- Spearheaded QA efforts using **JUnit**, **Jasmine**, and **Karma**, applying **Agile methodologies** and **Atlassian Jira** to improve reliability and minimize bugs.

08/2016 - 11/2019

WA, United States

Software Engineer

Amazon Web Services (AWS)

- Designed and implemented scalable, secure **cloud-based solutions** using **AWS services** such as **EC2**, **S3**, **Lambda**, and **RDS**.
- Participated in the migration of legacy systems to **AWS**, improving **system reliability** and **scalability**.
- Collaborated with cross-functional teams to integrate **cloud solutions** with existing systems, ensuring seamless **deployment**.
- Used **AWS Elastic Beanstalk** service for deploying and scaling **web applications** and services developed with **Java**, **Python**.
- Designed and implemented **APIs** to support the development of new features of **e-commerce platform** such as **user authentication & authorization**.
- **Skills: Amazon Web Services (AWS) • Webrtc • Angular • E-Commerce • WordPress • AngularJS.**

05/2014 - 08/2016

TX, United States

Java Engineer

Upsilon

- Contributed to the Education project by applying **MVC patterns** and **OOP** to optimize transaction speed, reduce maintenance costs, and support scalable growth.
- Built a high-performance backend using **Java**, **Spring Boot**, and **JDBC** to deliver reliable APIs and efficient data access, achieving faster response times and increased system reliability.
- Optimized data infrastructure with **MySQL**, achieving faster query speeds, improved data retrieval times, and scalable transaction support for high-traffic demands.
- Developed **RESTful APIs** to streamline data flow, enhance interoperability, and achieve faster response times for seamless integration with third-party applications.
- Developed and supported QA efforts with unit, integration, and automated testing using **JUnit**, applying **SOLID principles** to reduce bugs and strengthen platform reliability.

07/2010 - 04/2014

CA, United States

Web Developer

Baytech Consulting • Full-time

- **Developed** the frontend of an education project using **Javascript**, ensuring a **responsive, user-friendly** experience for **scalability** and future adaptability.
- Built a **user-friendly frontend** using **HTML5**, **CSS3**, **JavaScript**, **TypeScript**, and **Bootstrap** for a **responsive, modern UI**.
- Integrated **RESTful APIs** with **Axios** to optimize **data fetching** and ensure seamless communication for a **responsive user experience**.
- Optimized build, deployment, and scalability processes using **Webpack**, **Grunt**, and **Git** for efficient application delivery.

EDUCATION

09/2007 - 05/2010

- Bachelor's Degree in Computer Information Technology
Johnson College of Technology

SKILLS

Languages

Java, Kotlin, JavaScript, SCSS, GraphQL, ECMAScript (ES6), Less, HTML, CSS, HTML5, TypeScript, YAML, PHP, Rust, Solidity

SKILLS

Libraries/APIs

Angular, RxJS, NgRx, Angular Router, Tan Stack Query, React, Node.js, REST APIs, Twilio API, Stripe API, jQuery, Salesforce API, Stripe, Google APIs, D3.js, Prisma

Tools

InVision, Jira, Mongoose, TestFlight, Figma, Expo, Zapier, Amazon CloudFront CDN, Apache

Frameworks

Spring Boot, J2EE, Servlets, JSP, AngularJS, Express.js, React Native, Redux, Bootstrap, Ruby on Rails (RoR), Material UI, .NET, Apache Kafka, Apache Tomcat

Paradigms

Object-oriented Programming (OOP), Responsive Web Design (RWD), Mobile Development, Cross-platform, UX Design, UI Design, Figma

Platforms

MacOS, Firebase, Twilio, Amazon Web Services (AWS), Heroku, iOS, Android, Mobile, LAMP, Buddy, AWS Elastic Beanstalk, AWS Lambda, Google Cloud Platform (GCP), Eclipse, IntelliJ IDEA

Storage

MongoDB, PostgreSQL, MySQL, Amazon S3 (AWS S3), JSON, SQL

Other

TailwindCSS, Angular Material, Data Structures, Algorithms, API Integration, User Interface (UI), Full-stack, Drag & Drop, Front-end, Front-end Development, APIs, Web Applications, Mobile Apps, Mobile Applications, Full-stack Development, Consulting, Web & Mobile Applications, Adobe UX, Stripe Payments, User Experience (UX), QR Codes, Axios, Mobile Architecture, WebSockets, Design, Artificial Intelligence (AI)

KEY ACHIEVEMENTS

Enterprise LDAP Integration

As part of my work building an **enterprise application** for a **healthcare software company**, I set up the security for the app to utilize the existing **LDAP server** for authentication.

I designed the **LDAP schema** to meet the needs of the new project, and also be compatible with the structure of the existing **LDAP server**, which was relied upon by other legacy apps. I configured **Spring Security** in the new app (which was **EJB-based**) to use **LDAP**.

Once the code was complete, I created scripts and **LDIF files** to bootstrap new installations as well as automate **Dev** and **QA deployment** with a standard set of test and demo user credentials.

Migrated Multiple Web Applications to use a Single Sign-on Solution

We had several web applications, some running **Spring Boot** and one using **EJBs** and **Spring Security**. In order to make these applications function seamlessly together without users having to log into each, I implemented a **single sign-on** solution to consolidate the authentication.

I configured **Keycloak** as my identity provider, using an existing **LDAP server** for its data store. Since all of the applications used **Spring Security**, I was able to configure that using the appropriate **OpenID adapter**.

One of the challenges with this migration was that the **EJB application** needed to maintain the ability to authenticate directly against **LDAP**. This was to allow for a smooth migration in case the new authentication scheme did not work.

A RESTful Back-end Service

<https://www.yamibuy.com/>

A **RESTful back-end service** and search engine that I designed and built from scratch for **Yamibuy**, a famous Asian online shopping website. I fitted it into dynamic usages for mobile and web applications, using **Spring Boot**, **MyBatis**, and **MySQL**.
