Education

University of Texas at Dallas

Bachelor of Science, Computer Science

Richardson, TX

Aug 2019 – May 2023

Certifications

- AWS Cloud Practitioner

Professional Experience

Data Engineer

Mar 2025 – Present

Toyota Financial Services

Plano, TX

- Contributed to Apache Airflow proof-of-concept development using Python and SQL programming languages, demonstrating workflow automation and orchestration capabilities projected to save \$600000+ annually
- Optimized Tableau dashboard performance and data visualization by implementing rolling 6-month data windows and daily refresh schedules, improving data freshness and business intelligence reporting
- Developed automated data ingestion pipelines by querying PostgreSQL databases to extract JSON data and creating Airflow DAGs for ETL process migration and workflow orchestration
- Built cloud-based data infrastructure using AWS services, Snowflake data warehouse, and PostgreSQL databases with Python and SQL to support scalable data engineering solutions
- Implemented database optimization and query performance tuning in PostgreSQL, creating efficient data extraction processes and improving downstream data pipeline performance
- Automated data workflows and ETL processes by migrating manual JSON-based ingestion to Airflow DAGs, reducing manual processes and increasing data pipeline reliability
- Collaborated on data migration projects from legacy systems to modern data orchestration frameworks, ensuring data quality, system reliability, and business continuity

MLOps Engineer

Jan 2025 – Mar 2025

Toyota Motor North America

Plano, TX

- Developed and maintained automated deployment scripts for machine learning models to Hugging Face Hub, streamlining the model release process and ensuring consistent versioning and documentation standards across multiple ML projects.
- Created robust ETL processes that improved data accessibility and quality for the data science team, implementing data validation checks and monitoring systems to maintain pipeline reliability and data integrity.
- Established standardized workflows and documentation for model deployment and data pipeline usage, enabling self-service capabilities for data science teams and reducing operational bottlenecks.

Big Data Engineer

Jul 2024 – Jan 2025

Toyota Motor North America

Plano, TX

- Built a GitHub repository automation system using AWS Lambda, Python, and PyGithub to manage 500+ repos, cutting deployment time by 50% and eliminating 95% of manual configuration errors
- Designed and maintained distributed serverless infrastructure with AWS Lambda, EC2, and API Gateway, achieving 99.9% uptime while handling 10K+ daily automation and API events
- Integrated AWS Macie with automated PII detection workflows across 100+ S3 buckets, identifying and securing over 2 million sensitive data records
- Supported real-time compliance reporting by maintaining serverless pipelines that processed 500+ GB of data daily for classification and policy enforcement

Application Developer

Jan 2024 – Jul 2024

Toyota Motor North America

Plano, TX

- Developed backend services for content configuration management in internal chatbot systems, supporting 5K+ daily user interactions
- Created 20+ dynamic user interface components reducing form completion time by 30% and improving user satisfaction scores by 40%
- Enforced naming conventions across 500+ repositories, achieving 98% policy compliance and reducing onboarding time by 25%
- Built scalable detection workflows identifying and classifying 1M+ sensitive data records with 99.5% accuracy

Technical Skills

Programming Languages: Python, SQL, TypeScript, AWS Terraform

Frameworks & Libraries: Angular, Node.js, Apache Airflow

Cloud & DevOps: PostgreSQL, Snowflake, AWS Lambda, MWAA, AWS EC2, AWS RDS, AWS Lex, AWS Macie, Docker

Machine Learning: Hugging Face, Weights & Biases, MLOps pipelines
