

Dean Chapman

Sandy Springs, GA 30328 | (706) 995-7775 | chapmandean180@gmail.com | [Github](#) | [Linkedin](#)

Qualifications

Senior Full-Stack Engineer with 10+ years building scalable, high-performance web applications and APIs. Deep expertise in Node.js backends and modern frontend frameworks (React, Angular, Next.js), with extensive experience designing microservices, serverless systems, and data-driven visualizations. Strong focus on performance, accessibility, automated testing, and delivering exceptional user experiences. Proven track record leading teams, mentoring engineers, and shipping production systems in cloud-native environments.

Technical Skills

Web Frontend	HTML, CSS, JavaScript, TypeScript, Redux, RxJS, jQuery, D3.js	
	JavaScript Frameworks	React.js, Vue.js, Angular, Ember.js
	React Frameworks/Libraries	Next.js, Gatsby, React Bootstrap, Reactstrap, Material-UI, Chakra UI
	CSS Frameworks	Bootstrap, Tailwind CSS, Storybook
	CSS Preprocessors	SASS, LESS
Backend	JavaScript, TypeScript, Node.js, Nest.js, Express.js, RESTful, GraphQL	
Mobile/Desktop	React Native, Electron.js	
Databases	SQL, MySQL, PostgreSQL, MongoDB	
Cloud Services	AWS, Azure, GCP, Firebase	
Testing Tools	React Testing Library, Jest, Enzyme, Mocha, Chai, Jasmine, Cypress	
User Analytics Services	Google Analytics, Mixpanel, Pendo, Amplitude	
Map Services	Esri/ArcGIS, Mapbox, Google Maps Platform	
Performance Monitoring Services	Grafana, Prometheus, Datadog, Sentry	
Methodologies	Agile, Scrum	
Operating system	Windows, Mac OS, Linux	
Data & Analytics Tools	Databricks, Snowflake, SQL, Python	

Qualifications

- Strong experience in **React/Next.js** (**React Hooks**, **Class components**, **React Router**, etc.)
- Deep experience in **React application design** (**Component layout**, **state**, etc.)
- Experience building Web Frontend Applications using **Vue.js**, and **Angular**
- Expertise with **JavaScript**, **TypeScript**, **CSS**, **HTML**, and other libraries.
- Experience working with **D3** and other **Data Visualization/Charting** libraries.

- Experience building **Mobile** and **Desktop apps** using **React Native**, and **Electron.js**.
- Experience working with **Node/Express**, **PostgreSQL**, and **MongoDB**
- Strong experience with **RESTful** and **GraphQL**.
- Experience in **automated testing**, **unit tests**, **integration tests**, and **end-to-end testing**.
- Proficient in **CI/CD pipelines** using tools like **Jenkins**, **GitHub Actions**, or **GitLab CI**.
- Experience in working with **Serverless architectures**, **Microservices**, and **Micro Frontend**
- Solid experience developing backend services and APIs using **Golang**
- Experience building scalable and performant services using **Golang in cloud-native environments**
- Familiarity with Golang concurrency patterns (goroutines, channels) and standard library
- Strong understanding of **OOP concepts** and **Design patterns**.
- Experience with **Accessibility** and **ADA** compliance.
- Solid understanding of **Data Structures**, **Algorithms**, and **Functional programming**.
- Strong **Problem solving** skills.
- Experience across **startup**, **early-stage**, **mid-size**, and **large companies**.

Experience

Senior FullStack Engineer | NorthWell | 03/2024 - 07/2025

- Led architecture and full-stack implementation of a Next.js platform; implemented SSR + ISR strategies to improve SEO and reduce page load times for high-traffic pages.
- Designed and implemented backend services primarily in Node.js and NestJS, including authentication/authorization, license validation, and business-critical workflows; enforced strong typing with TypeScript across services to reduce runtime errors.
- Built well-documented RESTful and GraphQL endpoints consumed by multiple frontend clients; introduced OpenAPI (Swagger) specs and standardized error handling and versioning across APIs.
- Implemented advanced React optimizations (Suspense, lazy loading, memoization) to reduce client CPU/memory usage and improve rendering for complex data views.
- Replaced several synchronous batch jobs with concurrent NestJS worker processes and background job queues (Bull / Redis), improving job throughput and lowering latency for asynchronous tasks.
- Deployed containerized Node/Nest services using Docker and orchestrated with DigitalOcean/Kubernetes; created CI/CD flows in GitHub Actions to automate testing, building, and deployments.
- Integrated Stripe for payment flows, handling webhook security and reconciliation; implemented end-to-end validation and idempotency to prevent duplicate charges.
- Implemented centralized logging and monitoring (Datadog, Sentry) for Node services; defined SLIs and alerts which decreased incident detection time.
- Championed test-driven development for backend endpoints using Jest and Supertest; maintained high unit and integration test coverage and enforced coverage thresholds in CI.
- Mentored developers on Node.js best practices (error handling, async/await patterns, stream processing) and NestJS architecture (modules, providers, interceptors).

Senior FullStack Engineer | SitScape | 02/2023 - 02/2024

- Architected client-server solutions for a geospatial analytics platform: React + TypeScript SPA for core UX, Angular used for administrative and legacy modules to leverage existing in-house expertise.
- Built Node.js/NestJS microservices to ingest, normalize, and tile large geospatial datasets into PostGIS; used streaming parsers and worker queues to support resumable ingestion and efficient memory usage.
- Implemented server-side vector tiling and aggregation endpoints to precompute map tiles and pre-aggregated geometry payloads, improving client rendering speed for 2D/3D ArcGIS visualizations.
- Designed GraphQL aggregation layer with DataLoader to serve multi-source, relational queries to React/Angular clients while preventing N+1 issues and reducing round trips.
- Created D3.js-driven timeline and event visualizations integrated into React, optimizing virtual DOM updates and SVG rendering for large datasets.
- Managed CI/CD pipelines in Azure DevOps; authored Helm charts and Kubernetes manifests for deployment, enabling repeatable staging and production rollouts and supporting blue/green deploys.
- Implemented feature flags and staged rollouts, instrumented Pendo and custom analytics to measure adoption and usage; partnered with product to prioritize high-impact UX improvements.
- Introduced TypeScript typing across backend and frontend to reduce runtime errors and improve DX; added ESLint, Prettier, and Husky to enforce code standards and pre-commit checks.

Senior FullStack Engineer | Cognizant | 03/2021 - 01/2023

- Developed enterprise-grade backend services in Node.js/NestJS to support multiple frontend applications (React and Angular); focused on secure, scalable APIs with JWT/OAuth flows and RBAC enforcement.
- Migrated parts of the frontend to a shared component library (Storybook) to drive design consistency across React and Angular consumers; used web components and wrappers where appropriate to support cross-framework reuse.
- Implemented client-side data orchestration using React Query and custom hooks to manage caching, background refresh, and optimistic UI updates, decreasing API chattiness and improving responsiveness.
- Designed instrumentation and observability practices for Node/Nest services (structured logs, tracing headers) to expedite incident response and root-cause analysis; integrated monitoring dashboards and alerts.
- Built lightweight Golang utilities for CPU-bound telemetry processing workloads, while keeping I/O-bound, business-logic services in Node.js to accelerate feature delivery.
- Introduced SonarQube quality gates and enforced unit/integration test coverage within Bamboo CI to reduce defect rates and elevate code quality.

Senior FullStack Engineer | TTEC | 09/2016 - 02/2021

- Led frontend and backend efforts for a high-traffic e-commerce platform: implemented SSR and server-rendered product pages backed by Node/Express APIs to improve SEO and initial load performance.
- Designed and implemented Node.js services for product catalogs, cart/session handling, and checkout orchestration; collaborated with payment providers to ensure PCI-compliant integrations and secure token handling.
- Modernized legacy AngularJS admin tools to Angular (and selectively to React) to improve maintainability and developer productivity; built migration strategy and interoperability layers where needed.
- Implemented advanced performance optimization techniques across stack: code splitting, lazy loading, server-side caching, and critical CSS extraction, achieving measurable improvements in TTFB and TTI.
- Built analytics dashboards and D3 visualizations to surface conversion funnels, product performance, and operational metrics; integrated tracking via Google Analytics and GTM.
- Enforced testing disciplines (unit + E2E) with Jest and Cypress and implemented continuous deployments via GitLab/GitHub pipelines.

FullStack Engineer | Upwork | 03/2014 - 08/2016

- Developed and maintained interactive client-side web applications for educational platforms using JavaScript, HTML, and CSS, ensuring engaging learning experiences and cross-browser compatibility.
- Focused on creating intuitive and dynamic user interfaces that facilitate easy navigation and enhance educational content engagement.
- Implemented responsive web design for e-learning content, utilizing CSS media queries and flexible layouts to ensure optimal user experience across various devices and screen sizes.
- Leveraged Bootstrap's grid system and components to develop responsive educational websites.
- Integrated JavaScript frameworks such as React.js to develop dynamic and interactive educational tools and simulations.
- Used React for building Single Page Applications (SPA) that offer a more fluid and efficient user experience in online learning platforms.
- Focused on creating user interfaces that are not only responsive but also intuitive, allowing learners to interact with educational content seamlessly.
- Integrated various APIs into educational platforms to enhance functionality and content richness.
- Independently delivered several Python-based backend solutions for clients, including automation scripts, content management tools, and data processing workflows to support frontend needs in e-learning platforms.
- Built RESTful APIs in Flask and Node.js to serve educational content; implemented authentication, role-based access, and basic analytics.

- Delivered SPA frontends and integrated them with Node backend endpoints for fast, interactive user experiences.
- Conducted user research and testing to gather feedback and make iterative improvements to the user interface, aiming to create engaging and effective educational experiences.
- Adopted advanced CSS techniques and JavaScript to create highly interactive and visually appealing educational content.
- Collaborated with UX/UI designers to translate visual and interaction designs into functional web components, ensuring fidelity to mockups and enhancing the overall aesthetic and usability of educational platforms.
- Utilized Git for version control, collaborating closely with other frontend developers and UX/UI designers in educational software development projects.
- Engaged in code review, feature integration, and deployment management using GitHub, focusing on maintaining high-quality user interfaces and ensuring platform reliability.

Education

Southern Methodist University | 1992

Bachelor's Degree, Business/Corporate Communications
